CABLE ADDRESS—"PARKEDAVE"

CAUTION!

ADVANCE NO MONEY ON OUR ACCOUNT

NLM

Information has reached us from various parts of the country, of impostors who represent themselves as our agents, and upon such representation secure credit at hotels, boarding-houses, etc., and frequently advances of money from our friends in the drug trade.

Our travelers are supplied with sufficient money for their immediate needs, and access to us by post or telegraph is so easy that they can very readily secure more funds should they require them. We will not, therefore, be responsible for any funds advanced to anyone, unless supplied on specific authorization by us.

INDEX.

This Index embraces not only all our Specialties, but such other items as the reader might have difficulty in locating under their proper subdivisions. Preparations likely to be found among Fluid Extracts, Tablet Triturates, Compressed Tablets, Elixirs, Filled Capsules, etc., being under their respective headings alphabetically arranged, it was not thought necessary to incorporate them in the general index.

Information

Concerning Terms and Conditions upon which the Preparations Named in this List are Sold.

Fair dealing with all our patrons requires that no exceptions be made to such rules of commercial policy as seem necessary to be established for the proper conduct of vast business relations with the drug trade of the country. Any favoritism which we might show to a single patron would justly lead even that patron to suspect that we were according still greater advantages to his competitors, and we can do our friends no better service than to adhere as closely as possible to our published terms.

Please correspond with us for information not covered below.

NOMENCLATURE.

(See also pages 160 and 276.)

It will be observed that we have, in a general way, promptly adopted the nomenclature of the U. S. P. 1890, in listing and labeling our regular line of preparations. We have, however, deemed it appropriate to retain a few familiar titles which have been thoroughly established by usage, feeling certain that our patrons will, for the present, prefer, for instance, the familiar "Syrup Yerba Santa Aromatic" to the more correct "Syrup Eriodictyon Aromatic," and that pills which have become well known under the name "Calomel and Ipecac" would be less acceptable under the title "Mercurous Chloride Mild and Ipecac." For a similar reason we shall also continue to list "Fluid Extract Cascara Sagrada" instead of "Fluid Extract Rhamnus Purshiana."

In connection with our "B. P." preparations we employ the nomenclature of the British Pharmacopœia. We therefore list "Henbane" in one place and "Hyoscyamus" in another, "Serpentary" and "Serpentaria," "Asafetida" and "Asafœtida," "Ipecacuanha" and "Ipecac," etc.

FLUID EXTRACTS IN 1-2 AND 1-4 PINT BOTTLES.

For the convenience of those who desire our fluid extracts in smaller containers than pint bottles, we put them up in half- and quarter-pint bottles, with descriptive labels containing formulæ, etc. To cover the extra labor and the value of the bottles, an addition is made to list price, as stated on page 15. There is therefore no reason why these smaller packages should not be supplied if wanted, and the wholesale trade will be pleased to furnish the same when clearly specified.

HALF-GALLON vs. FIVE-PINT CONTAINERS.

We furnish our fluid extracts in *five-pint* containers, but not in *half-gallon* bottles unless specially ordered. Our friends should remember this when filling customers' orders, as loss might arise from inadvertent invoicing five pints as a half-gallon.

PREPARATIONS LIABLE TO FREEZE.

Preparations of a certain character, represented by Liquid Acid Phosphates, Distilled Ext. Witch Hazel, Nuclein Solution, and Dialyzed Iron, are liable to freeze in transit during extremely cold weather. (See Note of Reference No. 63.)

OMISSIONS, BREAKAGE, LEAKAGE OR SHORTAGE.

We cannot hold ourselves responsible for any losses which may occur in the transportation of merchandise shipped by us, whether from shortage, leakage or breakage, except in cases where the result is directly traceable to causes existing in our laboratory. The transportation companies act as the agents of the purchaser, and we must refer our friends to them for reparation in case of loss. If we are advised of claims on receipt of goods, we shall be pleased to render every assistance in our power in collecting them from the transportation companies.

REVISED PRICES.

Our products are sold subject to prices ruling on date of receipt of order. We cannot entertain claims for allowance in the event of a subsequent reduction, any more than we could make claim for increased value in case of a market advance after sale had been made.

REMITTANCES

Should be made by a Post Office Order, an Express Money Order or a bank draft. Checks on local banks are not acceptable to us for cash—not being funds current in Detroit or New York—a fee being charged by banks for the collection thereof. No allowance can be made by us for the expense of exchange, whether remittance be made by draft, postal order or express. Money, stamps or postal notes sent by mail will be at the risk of the sender, and we cannot be held responsible for loss during transit.

INSURANCE OF MAIL PACKAGES.

Packages forwarded by mail are at the risk of the consignee after delivery to the postal authorities. Even when registered, it is impossible to recover from the government in case of loss. We can *insure* the safe delivery of small packages at the cost of five cents for a value of not more than \$5.00, and ten cents for a value of not more than \$10.00, and we shall be pleased to do this when desired, charging the cost upon the invoice.

DETERIORATION.

We hold ourselves responsible to purchasers for the deterioration of articles of our general line *which have not been tampered with after leaving our laboratory, referring particularly to the removal of CAP, CORK OR LABELS from the containers.* But we cannot assume responsibility for the deterioration of products *which have been so tampered with* or which have been unduly exposed to sunlight, extreme heat, cold or moisture; nor for deterioration from influences beyond our control, the articles having left our laboratory in proper condition.

GLASS-LABELED SHELF-WARE, ETC.

For reasons which we have not here space to give in detail, we never donate glass-labeled shelf-ware, cases, cabinets, etc., as an inducement for the purchase of our products. We shall be pleased to mail to any inquirer a printed circular affording the grounds of this policy *in extenso*.

LOOSE LABELS FOR RE-DRESSING STOCK.

The application of a certain concern to a lithographer for quotations upon a quantity of labels bearing our card as it usually appears upon our bottles, has led us to adopt the policy of never supplying loose labels of this description to anyone. We have no doubt that almost every application we receive of this character is made in good faith, and yet any other course than the one we have adopted would be unsafe. We have issued a printed circular giving further reasons for this rule, and shall be very glad to send a copy to any dealer inclined to doubt that this policy is demanded by the highest interests of the pharmacist and physician at large, as well as by our own self-protection.

Table of Equivalents.

Recognizing the growing sentiment in favor of the adoption of the Metric System of weights and measures, the Seventh Decennial Convention for the Revision of the U. S. P. resolved to employ it exclusively in the preparation of all formulæ. While we have not adopted it generally in the present issue of our price list, we suggest that our patrons become practically familiar with it, since every indication points to its early general adoption.

Appended is a table of all the denominations of weight and measure that represent packages offered in our price list, opposite which are placed their approximate and exact metric equivalents. Also a table of the metric system with its corresponding equivalents in wine measure and avoirdupois weight. It will be observed that the correct rule which provides for the indication of "solids by weight and liquids by measure" has been followed.

LIQUIDS.	APPROXIMATE EQUIVALENT.	EXACT EQUIVALENT.
1 minim.....	0.06 Cubic centimeter.	0.061 Cc.
1 fl. drachm.....	4 Cc.	3.696 Cc.
1 fl. oz.....	30 Cc.	29.574 Cc.
4 fl. ozs. or $\frac{1}{4}$ pint.....	118 Cc. ($\frac{1}{8}$ Liter).	118.295 Cc.
8 fl. ozs. or $\frac{1}{2}$ pint.....	236 Cc. ($\frac{1}{4}$ Liter).	236.590 Cc.
16 fl. ozs. or 1 pint.....	473 Cc. ($\frac{1}{2}$ Liter).	473.197 Cc.
2 pints.....	1 Liter (1000 Cc.)	.946 Liter.
4 pints or $\frac{1}{2}$ gallon.....	2 Liters.	1.892 Liters.
1 gallon.....	4 Liters.	3.785 Liters.
1 Cubic centimeter...	16 minims.	16.23 mins.
4 Cc.....	1 fluidrachm.	1.082 fl. drs.
15 Cc.....	$\frac{1}{2}$ fl. oz. (4 fl. drs.)	4.057 fl. drs.
25 Cc.....	$6\frac{3}{4}$ fl. drs.	6.762 fl. drs.
30 Cc.....	1 fl. oz.	1.014 fl. ozs.
60 Cc.....	2 fl. ozs.	2.029 fl. ozs.
100 Cc.....	$3\frac{1}{2}$ fl. ozs.	3.381 fl. ozs.
120 Cc.....	4 fl. ozs. ($\frac{1}{4}$ pint).	4.057 fl. ozs.
125 Cc.....	$4\frac{1}{4}$ fl. ozs.	4.227 fl. ozs.
235 Cc.....	8 fl. ozs. ($\frac{1}{2}$ pint).	7.945 fl. ozs.
250 Cc.....	$8\frac{1}{2}$ fl. ozs.	8.453 fl. ozs.
300 Cc.....	10 fl. ozs.	10.144 fl. ozs.
470 Cc.....	1 pint.	15.892 fl. ozs.
500 Cc.....	1 pint 1 fl. oz.	1.056 pints.
950 Cc.....	2 pints.	2.007 pints.
1000 Cc. (1 Liter).....	2 1-10 pints.	2.113 pints.
4 Liters.....	1 gallon.	1.056 gals.

The half-liter is approximately 1 pint + 5.66%. The price of a pint being given, therefore, to find the price of a half-liter multiply by 1.0566.

500 Gm.	1 1-10 lbs.	1 lb. 1 oz. 279 grs.
900 Gm.	2 lbs.	1 lb. 15 ozs. 327 grs.
1000 Gm. (1 kilogramm. or Kilo).	2 1-5 lbs.	2 lbs. 3 ozs. 120 grs.

500 Gm., or ½ kilogramme, is approximately 1 lb. avoirdupois + 10.2%. The price of this quantity of any product may therefore be determined by multiplying the price of a pound by 1.102.

A Convenient Table

For the Extemporaneous Preparation of Solutions of Various Strengths.

To prepare the following approximately correct solutions, dissolve the amount of medicament indicated in sufficient water to make one pint:

For 1-50% or 1 in 5000 solution, use	1½ grs. of the medicament.
For 1-20% or 1 in 2000	3¾ grs.
For 1-10% or 1 in 1000	7½ grs.
For 1-4% or 1 in 400	18¾ grs.
For 1-2% or 1 in 200	36½ grs.
For 1% or 1 in 100	73 grs.
For 2% or 1 in 50	146 grs.
For 4% or 1 in 25	292 grs.
For 5% or 1 in 20	365 grs.
For 10% or 1 in 10	730 grs.

NOTE.—To make smaller quantities of any solution, use less water and reduce the medicament in proportion to the amount of water employed; thus, one-half pint of a 2-per-cent. solution will require 73 grains of medicament.

Standard Fluid Extracts

IN PINT, HALF-PINT, QUARTER-PINT AND FIVE-PINT BOTTLES.

A Class of Superior Assayed Fluid Preparations, introduced by us under the name of Normal Liquids, One Cubic Centimeter of Each being Equivalent to One Gramme of Drug of Standard Strength.

According to the U. S. Pharmacopœia, one cubic centimeter of any fluid extract represents one gramme of the drug employed in making it. It is apparent that such preparations will not be of invariable strength, since, in the purchase of crude drugs, especially those containing definite active principles, the quality cannot be judged by physical appearance with any degree of certainty. An estimation of the active medicinal constituents is the only true criterion by which the quality of a drug can be measured. Fluid extracts made in the ordinary way must, of course, share the variability of the drug, while our STANDARD FLUID EXTRACTS are adjusted to a uniform strength by assay, irrespective of the quantity of crude drug required, thereby acquiring a definite and uniform therapeutic value. A benefit so evident merits attention.

NOTE.—As the preparations of certain powerful drugs cannot be satisfactorily assayed by ordinary methods, *we test them physiologically upon animals*, and are thereby enabled to guarantee them to be of full therapeutic activity. Notable examples of this class are *Ergot*, *Indian Cannabis*, *Digitalis* and *Strophanthus*. See note 185.

For those fluid extracts which are "non-toxic," unless otherwise indicated we have adopted an *extractive standard*, which insures the thorough extraction of the drug employed.

Our friends may assure themselves of the identity of the preparations they order by specifying particularly "*Parke, Davis & Co.'s*," and *carefully examining the label and cap on each bottle*.

Fluid Extracts printed in *italics* are new remedies, descriptions of which will be found under "Notes of Reference."

This list of fluid extracts also comprises some concentrated tinctures and fluids which are appropriately listed here for the sake of convenience. These we have indicated by a star (*) in front. See also note 78.

To all compound fluids and fluid extracts is attached the formula, specifying the quantity of each drug represented in one pint or other given volume.

Authors' names, as usually abbreviated, are attached to the botanical names. A complete index, giving the unabbreviated names of these authorities, will be found on page 287.

The list price per pint will be reduced 10 cents when five-pint bottles are ordered. An addition of 10 cents to list price per pint will be made on orders for half-pint bottles, and an addition of 20 cents per pint for quarter-pint bottles. *Pint bottles will be supplied on orders in the absence of specifications to the contrary.*

If quarter-pint or half-pint bottles are ordered, insist upon receiving original packages with firm and descriptive labels attached. We do not hold ourselves responsible for the genuineness or quality of the product unless it is supplied in original containers, with cap and cork intact, and properly labeled.

The manufacture of the following numbers has been discontinued: 10, 11, 14, 16, 26, 39, 43, 97, 112, 137, 141, 167, 175, 182, 183, 190, 207, 208, 220, 222, 229, 230, 234, 235, 241, 253, 267, 269, 277, 280, 284, 316, 318, 343, 359, 377, 383, 384, 398, 405, 414, 433, 437, 439, 457, 464, 465, 470, 480, 489. No. 531 is not yet added.

Normal Liquids.

Normal Liquids were introduced by Parke, Davis & Co., in 1880, to demonstrate the superiority of assayed and standardized fluid preparations of uniform strength, over fluid extracts prepared in the ordinary manner and which necessarily shared in the variability of the drug.

The hearty endorsement accorded Normal Liquids by both the medical and pharmaceutical professions has led us to prepare a full line of Assayed and Standardized Fluid Extracts.

As many physicians have accustomed themselves to rely upon Normal Liquids, and will continue to indicate them in prescriptions, we have decided to continue them in our price list.

NOTE.—The estimation of alkaloids *by titration with volumetric acid solution* is based on their combining or quantivalent weights, each Cc. of acid solution used representing a definite amount of alkaloid. For example, 1 Cc. of n-100 volumetric acid solution is equivalent to 0.00289 Gm. of mydriatic alkaloids ($C_{17}H_{23}NO_8 = 289$). In the case of Normal Liquid Nux Vomica, one-half of the combined molecular weight of strychnine (334) and brucine (394), or 364, is taken as the molecular equivalent, assuming that the two alkaloids are present in equal quantities.

It is obvious that tinctures prepared by diluting our Normal Liquids with appropriate diluents must necessarily be more reliable than those made by the usual methods from commercial drugs of uncertain quality and identity, though the percentage of inert extractive matter may be smaller in the former.

Packages.—Normal Liquids are sold in bottles containing 1 pint, $\frac{1}{2}$ pint, $\frac{1}{4}$ pint, and 5 pints. Prices given refer to bottles of 1 pint each; an additional charge of 10 cents per pint will be made for liquids in $\frac{1}{2}$ -pint bottles, and 20 cents per pint if in $\frac{1}{4}$ -pint bottles, and a reduction of 10 cents per pint for 5-pint bottles.

Standard 0.3% alkaloids, based on acid titration.	
Veratrum Viride.....	1 50
Standard 1% total alkaloids, by weight.	

Solid Extracts.

We invite exhaustive tests of our solid extracts, as we claim for them the first rank for medicinal value. Analysis has demonstrated the superiority in alkaloidal strength of our narcotic extracts as compared with those of other manufacturers.

Extracts from drugs of determinable strength are accurately regulated by assay and adjusted to a uniform standard. The practical pharmacist will readily appreciate the importance of the object attained by such methods.

The manufacture of the following has been discontinued: Nos. 13, 15, 21, 54, 58, 60, 64, 70, 96, 98, 100, 103, 119, 123, 124, 125.

GERMICIDAL SOAP

(Formula of Dr. Chas. T. McClintock)

An antiseptic wash, convenient of preparation, harmless toward steel and nicked instruments, and above all efficient, has long been a desideratum among surgeons and practitioners of medicine. Mercuric chloride, powerful as it is, fails to kill all the germs; moreover, it corrodes the surgeon's tools. **Germicidal Soap**, as ordinarily used, **is at least five times as powerful** as a 1:1000 solution of mercuric chloride, and **does not attack steel or nicked instruments**. No other germicide for general professional use can compare with it.

See note of reference No. 80a; for price see Specialties, Part II.

Powdered Extracts.

For convenience in dispensing, powdered extracts possess some advantages over the solid, obviating the inconvenience and waste attendant upon the handling of the latter. It should be remembered that their nature is hygroscopic; the bottles therefore should always be kept in a cool place and securely closed with tightly fitting corks.

Where pound prices are quoted for these powdered extracts, an addition of 10 cents per pound to list price will be made on orders for half-pounds, and an addition of 20 cents per pound for quarter-pounds.

We have discontinued the manufacture of Nos. 25 and 35.

Concentrations.

This list comprises the proximate medicinal principles of the several drugs named, either in a crude powdered form, or isolated in the form of an alkaloid or resin. Owing to the liability of many of these articles to absorb moisture, they should be kept in securely corked bottles and in a cool place.

The preparations offered in the market under the name of concentrations vary greatly in physical properties as made by different manufacturers. In many instances, through ignorance of the chemistry of the drug, manufacturers have supplied a product nearly or quite inert; leptandrin, for example, has been prepared by precipitating the alcoholic tincture of the drug with water, in the mistaken belief that the active principle of the drug resided in its resinous constituents. We have aimed in our concentrations to present all the active constituents of each drug, excluding, as far as possible, inert matter; and when our preparations differ from those of other manufacturers, we are willing that they should be judged by their therapeutic efficiency.

It is thoroughly understood in America that the preparations called "concentrations" are not the active principles of the drugs they represent, but that they present in the form of a permanent powder all that is active in the drug, with a minimum of inert matter. The nomenclature of these preparations is so unsatisfactory and misleading that we have ourselves introduced into it certain innovations, not for the sake of distinguishing preparations of our own manufacture from others in the market, but simply as a safeguard against serious mistakes in dispensing. Thus, we do not label the concentration from digitalis "digitalin," since it might thereby be easily confounded with the more powerful glucoside to which the name "digitalin" properly belongs (see "Digitalisin"). Notwithstanding the care we have taken to explain the matter, we find that many of those whose knowledge of drugs has been derived from books, and foreigners generally, expect that the concentrations will consist solely of the active principle of the drug, perhaps in a slightly impure form. We beg to state distinctly that such is not the case. In absence of any standard, we conform simply to prevailing usage, which in this country is generally well enough understood. In so doing it is necessary sometimes to incorporate diluents, such as milk sugar or powdered drug, to produce a satisfactory permanent powder; it would be only confusing to physicians and dispensers if this diluent were mentioned on the labels as distinct from the "concentration," the dose of which, as a whole, is always correctly stated. Of course it matters not whether the diluent is inert matter derived from the drug itself, or whether it is deliberately added; in either case it is an integral part of the preparation which the physician prescribes as a "concentration."

Concentrations.

SPECIAL PREPARATIONS.

Extensive additions in the way of improved machinery and increased capacity having recently been made to our laboratory resources, we are better prepared than ever to handle special formulas of all kinds to advantage. We promise: Fidelity to formula, Celerity of production, Economy, and Elegance. Information confided to us in connection with formulas submitted is always scrupulously guarded from publicity.

The very perfection of our facilities for executing large orders makes it unprofitable to accept any contract for a less number of pills than 3000 sugar-coated or 1000 gelatin-coated; compressed tablets, coated or uncoated, less than 3000; or lozenges, less than 5 pounds. The minimum of liquid preparations which we can handle with satisfaction is 3 gallons; suppositories, any size, 1000; filled capsules, elastic or hard, 1000. Quantities less than these cannot be manufactured at correspondingly low rates.

We wish it distinctly understood that we cannot compete against cut prices based upon inferior material, as we have but one quality and that the best obtainable. So far as purity of ingredients and perfection of workmanship are concerned, it makes no difference whether the products we are manufacturing are in fulfillment of a special order (the material being supplied by us) or to replenish our regular stock. We consider our reputation at stake in either case.

In view of our unsurpassed facilities for the manufacture of pharmaceuticals of every variety, we respectfully invite all who may have special formula work to be done, to correspond with us upon the subject.

Sugar Coated and Gelatin Coated Pills.

OVIFORM.

Our pills are made from the purest materials and are coated by a method avoiding the application of any degree of heat which could impair their efficacy.

We direct special attention to the homogeneous character and ready solubility of the mass.

Some of our pills are intentionally made of a firm consistence in order to insure their permanency, but this condition does not impair the solubility of the mass, as the excipient employed is readily dissolved by the gastric juice.

For superiority of finish and uniformity of coating, our pills are unexcelled. *Particular attention is directed to the absence of unsightly needle-holes in our gelatin-coated pills, and to the perfect protection of the mass from deleterious atmospheric influences, secured by the employment of an improved process by which the pill is completely enveloped in a gelatin coating.*

The formula in each instance is strictly followed, irrespective of cost, and the entire process conducted under scientific management and by improved methods.

Particular care is taken to insure the preservation of the drug.

Our pills are put up for the trade in bottles of 100 and 500 each, *excepting a few pills of Rare Alkaloids, which are put up in bottles of 25 each, as noted in each instance.*

Oviform Gelatin-coated Pills will be supplied unless otherwise specified.

The manufacture of the following has been discontinued: Nos. 89, 191, 192, 193, 242, 321.

Please refer to our line of Enteric Pills, i.e. pills designed to pass the stomach intact and be dissolved in the duodenum or intestinal tract. See page 88.

Special quotations for pills of special formulæ or for stock pills in bulk.

See note 79.

PART
ONE.*Specify P. D. & Co.'s*

As in many instances we manufacture several formulæ of pills and other lines, from precisely the same component parts, varying only in the proportions of each employed, we have signified the different formulæ by separate numbers or letters, and it is of the utmost importance, when ordering, that the exact formula desired be thus clearly specified.

In the absence of such specification, where more than one such formula is listed, we shall send that formula which is designated by a dagger, thus †.

Oviform Gelatin-coated Pills will be supplied on orders which do not specify shape or coating.

†See note at head of page 50.

Pink Granules, Sugar-Coated.

These granules are intended to supply the needs of physicians in cases which require minute or frequently repeated doses. A glance at the list will show that they are distinguished from our regular line of pills in that they represent doses suitable for children. This diminishes the risk there might otherwise be of giving to a child an overdose of some powerful remedy. At the same time their distinctive color renders them attractive to the class of patients for which they are intended.

List No.		A Per bot. of 100.	B Per bot. of 500.

Diurnules and Diurnal Tablet Triturates.

In an article published in the *Revue de Thérapeutique*, M. Trouette has suggested a new mode of administering toxic drugs.

Additions are constantly being made to the already long list of alkaloids, glucosides and similar active principles, and it is almost impossible for the practitioner to have at finger's end the ordinary, minimum and maximum doses of each.

It is, therefore, proposed to furnish a new line of granules and tablets which shall overcome this difficulty, as follows: The maximum internal (full daily) dose of the substance for the adult is subdivided into 12 equal doses. We exhibit these subdivisions in the shape of granules, under the name of DIURNULES, with the coating colored yellow, to distinguish them from parvules, pink granules and regular white granules; also in the shape of DIURNAL TABLET TRITURATES, for list of which see Part II.

When it is desirable to administer or prescribe the full daily dose for an adult of any such active principle, one diurnule or diurnal tablet triturate is to be administered every two hours. If health or age of patient does not warrant full daily dose, the physician can readily decide whether two-thirds or one-half the full daily dose shall be prescribed, and, in accordance with his decision, one diurnule or diurnal tablet triturate can be administered every three or four hours, respectively, etc.

The diurnal triturate admits of smaller subdivision, each tablet being marked by lines, so that it may be divided into two or four equal parts in cases where smaller doses than one-twelfth of the full daily dose are to be administered. These tablet triturates also commend themselves for administration to children and to such patients as cannot take pills, as they can be crushed into powder or dissolved in water.

For Diurnule Pocket Case, see Part II; also note 64.

DIURNULES.

Diurnules.

(SUGAR-COATED, YELLOW.)

Twelve diurnules represent, in absolutely equal subdivision, the FULL DAILY INTERNAL DOSE for an adult.

No. 913, Curarine, has been discontinued.

See also Diurnal Tablet Triturates, Part II.

Hypodermatic Tablets.

SOLUBLE.

ACCURATE.

PERMANENT.

CAUTION.—On unspecified orders for 100's we send four tubes of 25 each, therefore be sure and specify "In bottles of 100" or "C" where bottles of 100 are desired.

Also kindly specify "Hypodermatic Tablet," or the abbreviation "H. T.," to prevent your order being interpreted as calling for Tablet Triturates or Compressed Tablets.

We prefer to supply the tablets in tubes of 25 each, in which package they will be less apt to break or crumble, as they fit closely in the tube. This package also enables the druggist to sell the tablets in original packages when smaller quantities than 100 are called for. In tubes of 25 the tablets are less subjected to the influence of the weather, as the container will not be opened so frequently.

We manufacture, on order, any tablets (500 or more) that may be desired, provided the nature of the material will admit of presentation in this form.

Hypodermatic cases adapted to these tablets are provided; for description see note 94. For prices see Part II.

For Hypodermatic Tablets for veterinary purposes, see page 101.

PLEASE ORDER BY NUMBER AND LETTER.	A	B	C
	Per tube of 25 each.	Per 100 in tubes of 25.	Per bot. of 100.

Ophthalmic Tablets.

In the introduction of Soluble Ophthalmic Tablets we aim to embrace those drugs most commonly employed locally in treating diseases of the eye, or in preparing this organ for surgical therapeutics. We are confident that their importance will be at once recognized, not only by the eye specialist but also by the general practitioner.

Chemically pure boric acid has been added as a diluent when such was required.

These tablets dissolve readily in distilled water, and hence can be employed for the extemporaneous preparation of solutions.

For description and cut of our Medicine Dropper and Bottle, graduated, see note 117, and for price see Specialties, Part II.

	Per bot. of 100.	Per bot. of 500.	Per bot. of 1000.
Atropine sulphate, 1 gr., per tube of 25 tablets, \$1.00			
Boric acid, 5 grs.....	\$ 18	\$ 70	\$1 20
Cocaine.*			
Copper sulphate, 1 gr.....	14	50	80
Eserine, <i>see Physostigmine.</i>			
Homatropine hydrobromate, 1 gr., per tube of 10 tablets, \$4.50			
Physostigmine salicylate, 1-8 gr., per tube of 25 tablets, 65c.			
Sodium borate, 5 grs.....	21	85	1 50
Tannic acid, 5 grs.....	40
Zinc sulphate, 1 gr.....	14	50	80

*For tablets of Cocaine hydrochlorate, 3 grs., 2 1-4 grs. and 1 1-8 grs., for the extemporaneous preparation of 4-per-cent. and 2-per-cent. solutions, see Specialties, Part II.

Hypodermatic Tablets for Veterinary Use.

At the suggestion of influential veterinary surgeons, we have added to our list this line of Veterinary Hypodermatic Tablets, put up in tubes of 1 dozen tablets.

They are exceedingly convenient for the medicine case of the Veterinary Surgeon, who can readily prepare, as needed, solutions of definite strengths for hypodermatic injection.

We also supply a Veterinary Hypodermatic Case, complete. For price, see Part II, and for description, etc., note 176.

Medicinal Elixirs, Wines and Syrups.

Designed to Present Medicines in a Form Agreeable to the Palate.

With the increasing refinement in taste that accompanies progress in civilization, there has arisen a natural demand for remedies which are inviting in appearance and pleasant to the palate.

Our Elixirs, Wines and Syrups are guaranteed to contain the full proportion of medicaments indicated upon the label, and to represent their therapeutic value as fully as the nature of the preparation will permit. Under no circumstances do we sacrifice therapeutic properties to attain palatability.

NOTE ON CONTAINERS.—Elixirs, Wines and Syrups are put up in *pint* and *half-gallon* bottles.

Medicinal Elixirs.

The manufacture of Nos. 42, 43, 67, 68, 73, 94, 96, 108, 109, 120 and 123 has been discontinued.

Each fluidounce of Elixir represents the quantity of ingredients specified.	Per gallon in $\frac{1}{2}$ -gal. bottles, inclusive.	Per dozen pints.

Capsules of Quinine Sulphate.

PLEASE COMPARE OUR PRICES WITH ORDINARY COST OF THE
QUININE SULPHATE AND EMPTY CAPSULES EMPLOYED.

The Quinine sulphate is granulated to facilitate filling, and although the capsules may not always be full they will invariably contain the correct weight of medicament.

SOLUBILITY.

One of these capsules dropped into a glass of WARM water, acidulated with a few minims of hydrochloric acid to correspond to the gastric fluid, will dissolve almost immediately. Their superiority over PILLS and TABLETS of Quinine sulphate ordinarily found in the market will be at once apparent.

ADMINISTRATION.

The action of Quinine sulphate can often be facilitated by appropriate acidulous drinks, such as hot lemonade, or a small quantity of liquid acid phosphates in sweetened water. In any event a liberal draught of water or other acceptable liquid should be swallowed with the capsules.

Under ordinary conditions the ready solubility of these capsules will insure prompt action. It should be borne in mind, however, that the presence of free acid tends to increase the solubility of Quinine sulphate; the capsules can, therefore, be advantageously administered about one hour after meals, when gastric digestion is well advanced.

It is generally considered best to avoid prescribing Quinine capsules or pills in conjunction with alkaline remedies.

For packages and prices, see page 143.

HYDRASTIS (GOLDEN-SEAL)

And Its Preparations.

The therapeutic value of this important drug is attested by the fact that it has been officially recognized in foreign pharmacopœias, although these authorities are usually tardy in recognizing remedies of American origin. We find, also, that German investigators are at work in developing useful derivatives of the alkaloids already known to exist in the plant. Regarding the principal natural alkaloids, hydrastine and berberine, it may be said that the experience of the medical fraternity has established the fact that to the former may be ascribed the effects on mucous membranes and the latter may be regarded as possessing decided tonic properties.

HYDRASTIN VS. BERBERINE.—It is to be regretted that considerable confusion has been produced by the incorrect nomenclature given to the preparations of Golden-seal by certain manufacturers, by whom the yellow alkaloid BERBERINE and its salts have been designated as Hydrastine, Hydrastia or Hydrastin.

Hydrastine is the white alkaloid of Golden-seal. A preparation has long been marketed under the name of Hydrastin, which is a *concentration* representing the combined active principles of the drug, and if the use of the term Hydrastin could be limited to this concentration alone, much confusion would thereby be avoided. Our customers would confer a favor by ordering

Berberine hydrochlorate	instead of Hydrastin muriate.
Berberine phosphate	" " Hydrastin phosphate.
Berberine sulphate	" " Hydrastin sulphate.

Golden-seal.—We furnish carefully selected drug, pressed, in pounds and ounces. Our preparations of Hydrastis may be enumerated as follows: **Fluid Extract Hydrastis (assayed).**—Not miscible with water to a clear solution, as it contains resinous matter.

Fluid Extract Golden-seal without Alcohol.—Miscible with water and preferred for certain purposes. By reason of the absence of alcohol, it is largely divested of irritating properties.

Fluid Golden-seal, Colorless.—In this, the yellow alkaloid, berberine, is absent, and being intended as a local application for Gonorrhœa, Leucorrhœa, etc., it is free from any tendency to soil the clothing. This preparation contains only the white alkaloid, which is valued for its effect on the mucous tracts.

Normal Liquid Hydrastis.—Contains 2.5% hydrastine (white alkaloid) and an average amount of berberine. Not miscible with water.

Solid Extract Hydrastis.—Contains the entire active principles of the drug and represents about four parts of the same.

Powdered Extract Hydrastis.—Strength same as solid extract. The moisture removed is replaced by powdered Hydrastis.

Hydrastin (concentration).—A powdered preparation containing the white and yellow alkaloids of Hydrastis.

Pills.—Berberine hydrochlorate, 1 gr.; Berberine sulphate, 2 grs.; Berberine and Podophyllin; Female, Leucorrhœa; Hydrastin (concentration), 1-20 and 1 gr.; Night Sweat; Ox Gall Compound.

Tablet Triturates of Hydrastine (white alkaloid).—1-25, 1-16, 1-8 and 1-4 gr.

Elixirs.—Berberine and Iron; Rhubarb and Potassium; Rhubarb and Potassium with Pancreatin.

White alkaloid Hydrastine.—Combines readily with acids.

Hydrastine hydrochlorate (salt of white alkaloid).—Freely soluble in water.

Hydrastine sulphate (salt of white alkaloid).—General properties similar to those of the hydrochlorate.

Hydrastinine hydrochlorate.—Distinctly more powerful than Ergot in arresting post-partum hemorrhage. Valuable also in all forms of menorrhagia, whether due to simple atony, fibroids, or even more severe organic disease.

Yellow alkaloid Berberine hydrochlorate (Hydrastin muriate).—Sparingly soluble in water in the proportion of about 1 to 500.

Yellow alkaloid Berberine phosphate (Hydrastin phosphate).—Soluble in water in the proportion of about 1 to 10.

Yellow alkaloid Berberine sulphate (Hydrastin sulph.).—Freely soluble in water, and to be preferred especially where local or external application is desired.

Soluble Gelatin Capsules.

1. Soluble Elastic Capsules Filled.

See pages 116 to 122.

2. Soluble Elastic Capsules Filled, Extra Sizes.

See page 122.

3. Hard Filled Capsules.

See pages 123 and 124.

4. Empty Capsules.

See Part II.

**Prepared from the Finest French Gelatin by Improved Processes and Apparatus; Very Soluble and Easy to Swallow;
Unexcelled in Quality.**

We offer here a superior means for the administration of drugs possessing pungent, acrid or oily properties. The enclosure of such substances in an envelope of flexible gelatin not only avoids giving offense to the palate, but allows the medicine to be exhibited with greater ease and in larger single doses.

When drugs of this nature are taken in the ordinary way, it becomes a difficult matter to avoid the occurrence of nausea, which often seriously interferes with the production of the proper remedial effect.

We desire to state, with reference to the drugs which are presented in this form, that, whether or not of our own manufacture, they are of the best quality the market affords.

We would direct special attention to our Improved "Acme" Capsule Filler, page 132; also note 32.

*SOME ADVANTAGES OF**Empty Gelatin Capsules.*

Prompt solution in the fluids of the stomach, and therefore immediate assimilation of the medicament administered.

The medicament may be administered in its most assimilable form (loose powder), and its nauseous taste still disguised.

Quick returns may be expected from emetics administered in empty capsules.

An eminent physician directs attention to the fact that even fluids may be administered at the bedside of the patient by dropping the liquid into a capsule, with the aid of a pipette, and having the patient swallow it at once before the fluid has had time to dissolve the gelatin. The same doctor secures the best effects from Cascara Sagrada by directing the patient to procure a box of capsules and a pipette and thus administer the bitter fluid extract at prescribed periods.

Our Hard Empty Gelatin Capsules are unequalled for purity and solubility. The caps fit closely and are readily adjusted. For prices, see pages 131 and 132.

EXTRA SIZES CAPSULES.

Hard Filled Capsules.

These capsules are prepared from the finest material, and are not surpassed by any brand in use.

All the formulæ mentioned in this list of Hard Filled Capsules will also be found in Soluble Elastic Capsules, pages 116 to 122.

The manufacture of Nos. 109, 116, 117 and 118 has been discontinued.

Glyceroles.

Each fluidounce of any Glycerole represents the quantity of ingredients specified.

	Per pint.
Hypophosphites.....	\$ 1 00
Calcium hypophosphite, 6 grs.	
Sodium hypophosphite, 5 grs.	
Potassium hypophosphite, 3 grs.	
Lead subacetate, B. P.....	70
Pepsin, concentrated, see Pepsin preparations, pp. 141 and 142.	
Pepsin and Wafer Ash.....	90
Saccharated Pepsin, U. S. P. 1890, 16 grs.	
Wafer Ash, 30 grs.	
Tar, 30 grs.....	65
Yerbine Compound (for price, see page 136).	
Eriodictyon, 90 grs.	Potassium bromide, 7 1-2 grs.
Glycyrrhiza, 90 grs.	Grindelia, 30 grs.
Wild Cherry, 30 grs.	Pine Tar, 2 3-4 grs.
Salicylic acid, 2 grs.	

Oleates.

These oleates are unlike ointments, being *true chemical combinations* and not mechanical mixtures, and we therefore omit the percentage of oxide of metal. Each oleate is a normal or undiluted chemical combination. The manufacture of these preparations is conducted with the utmost care, and the product handled with a special view to permanency and uniformity. Descriptive circular supplied on application.

	1-lb. bottles. per lb.	1-oz. bottles. per oz.
For prices in ½-lb. and ¼-lb. bottles, add 15 cents and 30 cents respectively to the prices for pound bottles.		
Bismuth.....	\$4 50	\$.35
Used undiluted, as a soothing application.		
Copper.....	3 00	25
Employed in the form of ointment, 10 to 20 per cent. oleate, for the treatment of ringworm, etc.		
Iron.....	3 50	30
Readily soluble in fats. Used as a local astringent and general tonic.		
Manganese.....		50
Recommended as an efficient emmenagogue when applied by inunction to the abdomen in the form of a 20-per-cent. solution.		
Manganese, 20% solution of the oleate.....		30
Emmenagogue. See preceding note.		
Mercury (precipitated).....	4 50	35
Stable in composition. Produces all the therapeutic effects of the mercury. From this pure oleate, a "20%," "10%," or "5%" oleate can easily be prepared extemporaneously, as fully explained in the circular accompanying each parcel.		
Tin.....	4 50	35
A remedy of considerable value for restoring the luster of diseased nails.		
Zinc.....	3 00	25
An impalpable powder. Dusted over the surface in skin diseases. Also employed in the form of an ointment.		

Oleates of Alkaloids.

These oleates produce the same proportionate effect as the simple agents. They are of great benefit where the remedies may not be administered in the usual way, or where local action is required.

In fractions of an ounce the price will be increased proportionately.

	Per oz. Av.
Aconitine, containing 2% alkaloid as an oleate	\$ 80
Atropine, containing 2% alkaloid as an oleate	65
Morphine, containing 10% alkaloid as an oleate	I 15
Morphine and Mercury	70
Containing 5% of Morphine alkaloid and 20% of Mercuric oxide.	
Quinine, containing 25% alkaloid as an oleate	50

Inhalants

FOR USE IN ATOMIZING INHALERS.

[SEE PART II, PAGE 144, FOR PRICE, AND NOTE 155 FOR DESCRIPTION, OF SIMPLE ATOMIZING INHALER.]

Put up in pint, half-pint, and quarter-pint bottles. Prices given are for pint bottles. For half-pint bottles an additional charge of 10 cents, and for quarter-pint bottles of 20 cents, per pint will be made.

The manufacture of Inhalants Nos. 3, 4, 5, 8, 9, and 12 to 18 has been discontinued.

	Per pint.
Inhalant No. 1	\$ 35
A petroleum product specially adapted for inhalation and for use as a base, or diluent, for inhalants. It is free from irritating properties, on account of which it is much to be preferred to similar preparations from which the sulphuric acid or other objectionable agents, used in process of purification, have been imperfectly removed.	
Inhalant No. 2	I 00
Copaiba, 1-2 fl.oz. Ether, 1 fl.oz.	
Inhalant No. 1, sufficient to make 4 fl.ozs.	
Inhalant No. 6	60
Oil of Tar, 30 ℥. Inhalant No. 1, 1 fl.oz.	
Inhalant No. 7	I 00
Oil Eucalyptus, 60 ℥. Inhalant No. 1, 1 fl.oz.	
Inhalant No. 10	I 00
Tinct. Iodine, 120 ℥. Fluid Tolu, soluble, 1 fl.oz.	
Carbolic acid, 120 grs. Glycerin, 1 fl.oz.	
Alcohol, sufficient to make 3 fl.ozs.	
Inhalant No. 11	I 25
Fl. ext. Cubeb, 60 ℥. Spirit Camphor, 60 ℥.	
Fluid Tolu, soluble, 60 ℥. Carbolic acid, 60 grs.	
Tinct. Iodine, 60 ℥. Glycerin, 1-3 fl.ozs.	
Alcohol, sufficient to make 4 fl.ozs.	
Inhalant No. 19	2 50
Iodoform, 20 grs. Oil Eucalyptus, 20 ℥.	
Beechwood Creosote, 10 ℥. Ether, 120 ℥.	
Oil Sweet Almond, sufficient to make 1 fl.oz.	

Granular Effervescent Preparations.

These salts will be found equal to the best domestic or imported brands in the market. Each drachm contains the quantity of ingredients specified in its formula.

<div style="border: 1px solid black; padding: 2px; display: inline-block;"> For price in pound bottles, deduct 60 cents from price for one doz. 4-oz. bottles and divide remainder by 3. </div>		Per doz. 2-oz.	Per doz. 4-oz.
Caffeine, citrated, U. S. P.....	100 Gm. contains 2 Gm. Citrated Caffeine.	\$3 00	\$ 4 75

Yerbine Compound, *see Glycerole Yerbine Compound*, page 136.

OUR

Improved Lofoten Cod-Liver Oil

is prepared with a special view to ensuring

PERMANENCY, PALATABILITY, AND THERAPEUTIC EFFECT.

It is nearly tasteless and odorless, yet presents the undiminished virtues of that classic resource in wasting diseases—pure cod-liver oil. Those to whom the pure oil is objectionable will find in our

EGG EMULSION

(formula of L. B. Hewitt)

a palatable and easily assimilable preparation, containing **40 per cent. of pure Lofoten cod-liver oil**, with no other emulsifying agent than eggs, and flavored with a fine quality of brandy. In this emulsion, unlike the ordinary mixtures upon the market, the vehicle is scarcely less valuable than the oil itself. There is nothing to encumber or retard digestion, nothing to interfere with the action of the principal ingredient. Long exposure has proven the permanence of the combination. Its elegance and palatability speak for themselves. Miscible in any proportions with water, milk, or wine.

For prices see page 133.

*Soda-Fountain Specialties.*PART
TWO.

The attention of the trade is directed to the following eligible pharmaceuticals for soda-fountain use:

		List Price to Price. Trade.
Birch Beer Extract, in pint bottles.....per doz. bots..	\$12 00	\$10 00
in ½-gal. bottles.....per gal..	6 00	5 00

Yields an excellent Birch Beer suitable for bottling or soda-fountain use.

Concentrated Acid Phosphate (for soda-fountain use), in gallon jugs.....per gal..	1 05
--	------	------

By reason of its elegance, uniformity, purity and acidity, this preparation is especially adapted for acidulating beverages; should not be confounded with Liquid Acid Phosphate.

Concentrated Extract of Lemon, in pint bottles.....per doz. bots..	14 00	12 00
in ½-gal. bottles.....per gal..	7 00	6 00
A richly flavored extract prepared from fresh lemon peel.		

Concentrated Extract of Orange, in pint bottles.....per doz. bots..	14 00	12 00
in ½-gal. bottles.....per gal..	7 00	6 00
A richly flavored extract prepared from fresh orange peel.		

Concentrated Ginger Ale Extract, in pint bottles.....per doz. bots..	12 00	10 00
in ½-gal. bottles.....per gal..	6 00	5 00

Retaining all the pungency of flavor of the best grade of Jamaica ginger, this preparation is free from inert resinous constituents, and therefore miscible with water, syrup, etc.

Fluid Ginger, Soluble (for syrup), see Fluid Extracts, p. 23.

Extract of Vanilla, in pint bottles.....per doz. bots..	30 00	24 00
in ½-gal. bottles.....per gal..	15 00	12 00

An extract of prime Mexican vanilla, guaranteed to be free from tonka, synthetic vanillin, cumarin, or other substance not found in the vanilla bean or the menstruum used to extract it.

Fluid Beef Jelly, see page 130.

Fluid Extract Coffee, for syrup; see Fluid Extracts, page 21.

Makes an excellent Syrup of Coffee for the soda-fountain.

Granular Effervescent Acetanilid Compound, in 1-lb. bots.....per bot..	45
in 5-lb. tins.....per lb..	42
in 10-lb. tins.....per lb..	40

A combination of Acetanilid and Sodium Bromide with an effervescent base, suitable for use at the soda-fountain.

Granular Effervescent Caffeine and Potassium Bromide, B "B," in 1-lb. bottles.....per lb..	45
in 5-lb. tins.....per lb..	42
in 10-lb. tins.....per lb..	40

Each ounce contains: Citrated Caffeine, 2 grs.; Potassium Bromide, 10 grs.

Lime Juice and Kola, in pint bottles.....per doz. bots..	8 00	7 00
in ½-gallon bottles.....per gal..	4 50	4 00

Lime Juice and Pepsin, see page 137.

Decorated Tin Pressed Herb Cans.

We now furnish neat decorated tin cans for our pressed herbs, at the manufacturer's price.

Each can will hold 2 one-pound or 32 one-ounce packages, and makes a very presentable container for the druggist's shelf.

These cans protect the pressed drugs from the injurious effects of light and the ravages of vermin.

They are provided with interchangeable tin labels, both on the top and in front, so the druggist may place them on end or side to suit his shelving.

DIMENSIONS: height, 9 inches; width, 4½ inches; depth, 3¾ inches.

For Price, See Page 142.

PROPERTIES.—Stimulant, diaphoretic, emmenagogue and carminative.
Dose.—A wineglassful (60 Cc.) of an ounce to the pint infusion.

PENNYROYAL

(*Hedeoma pulegioides*
(Lin.) Pers.)

PARKE, DAVIS & CO.,

DETROIT, MICH.,

U. S. A.

SYNONYMS—HEDEOMA, U. S. P.;
Squaw Mint, Tickweed, Stinking
balm; Herbe de pouliot américain,
Fr.; Amerikanischer Pöfel, Ger.
PART EMPLOYED—Leaves and tops.
NATURAL ORDER—Labiales.
HABITAT—United States and Canada.

THE ABOVE REPRESENTS A SAMPLE LABEL FOR PRESSED HERBS.

COMPLETE PRICE AND REFERENCE LIST OF

PRESSED HERBS,

—INCLUDING A FULL SELECTION OF—

HERBS, LEAVES, FLOWERS, BARKS AND ROOTS
FOR DRUGGISTS' USE.

We pay particular attention to the quality and identity of the drugs; our facilities for securing supplies are superior; we exercise great care in garbling, and our packages are specimens of neatness and security.

Please Notice.—We call attention to an important improvement in our packages of pressed herbs, consisting in the use of an impervious paper to cover all drugs depending for their activity on a volatile constituent. Drugs which otherwise would deteriorate rapidly, retain their strength unimpaired in these packages. The inconvenience and liability to error which invariably attend the handling of loose bulky herbs are reduced to a minimum by the adoption of these compact and neatly labeled packages.

Nomenclature.—We have adopted the common vernacular names, and in each case have endeavored to choose the correct one. To avoid confusion, please do not order by the reference names which are printed in *italics*.

A List of Synonyms will be found at page 276.

When distinctly specified, barks and roots can be supplied in *ounces* at 5 cents per lb. more than price quoted.

SYNONYMS.

On pages 276 to 286 will be found a list of botanical, vernacular and pharmacopœial synonyms, which will prove of great convenience for reference. Our Fluid Extracts, Pressed Herbs, etc., are, for the most part, listed under the vernacular name, but official Fluid, Solid and Powdered Extracts bear the titles authorized by the U. S. Pharmacopœia. The vernacular name, if not known, can be readily found by consulting the list of Synonyms.

Tablet Triturates.

In the manufacture of our Tablet Triturates the purity of the materials and the perfection of the processes unite in securing the highest degree of permanency, solubility and therapeutic efficiency; unlike some formulæ of *compressed tablets*, they are always perfectly soluble and readily divisible.

Formulæ not listed we will supply upon special order, provided the tablet form of presentation be feasible and the number required sufficiently large to enable us to fill the order at a satisfactory price. Correspondence solicited.

By arranging all our Tablet Triturates in *both alphabetical and numerical order* we consult the convenience of physicians and pharmacists, enabling the former to see at a glance what medicaments we put up in this form, and the latter to interpret orders, bills and invoices without loss of time.

INSTRUCTIONS FOR ORDERING.

We desire to call particular attention to the absolute necessity of specifying whether Tablet Triturates, abbreviated as "T. T.'s," Compressed Tablets, abbreviated as "C. T.'s," Chocolate-coated Tablets, abbreviated as "Choc. C. T.'s," or Hypodermatic Tablets, abbreviated as "H. T.'s," are wanted, when ordering either by name or by number.

Please designate by number the formula, and by letter the container desired, thus: "500 T. T., No. 10, C," will mean 500 Tablet Triturates of Aloin, 1-10 gr., in bottles of 100; "2000 T. T., No. 10, M," will mean 2000 Tablet Triturates of Aloin, 1-10 gr., in bottles of 1000; "2000 T. T., No. 10, D," will mean 2000 Tablet Triturates of Aloin, 1-10 gr., in bottles of 500.

We do not price tablets in bottles of 100 where the price per 1000 is less than 75 cents, but will supply them when desired at the uniform rate of 10 cents.

Prices are strictly net, 30 days, no transportation allowance. As we cannot control sudden changes in such articles as quinine, morphine, cocaine, etc., it will readily be seen that we cannot be held responsible therefor, and hence cannot under any consideration allow claims for rebate on stock on hand of tablets containing such ingredients. All our list prices are subject to market changes without notice. Special quotations for bulk orders given upon application.

Please notice that the titles under which these tablets are listed do not always correspond exactly to those adopted by competition. Tablets which we quote as "R A" may be quoted by competition as "R 1" or "R 2," and *vice versa*, and it is therefore advisable to order by number, rather than by formula or title.

SPECIAL NOTICE.

Notwithstanding the fact that transportation charges appear sometimes excessive, we can in no instance transfer small quantities of tablets from bottles to other containers; the expense and inconvenience of so doing would be out of all proportion to the saving effected in express charges.

See also Compressed Tablets, page 199, and Chocolate-coated Tablets, page 229.

For Tablet Triturate Cases, see page 225.

PART
TWO.*Specify P. D. & Co.'s**Tablet Triturates from Mother Tinctures.*

We have added to our list of laboratory products the following line of Tablet Triturates. The Mother Tinctures from which these are prepared are procured from the most reliable manufacturers of homoeopathic products in Europe, and can be depended on to be authentic in every respect, and worthy of the confidence of those who are accustomed to the use of homoeopathic preparations, since they conform strictly to every requirement of the Hahnemannian pharmacopœia. The Tablet Triturates themselves are made with every care from these Mother Tinctures, and we guarantee each tablet to represent exactly the quantity indicated.

CHOCOLATE-COATED TABLETS.

Especial attention is directed to our new line of Chocolate-coated Tablets (see page 229), which we have added in response to the request of many of our patrons.

We guarantee them to be made by the most approved processes and of the best materials.

Compressed Tablets.

Put up in bottles of 1000 ("M"), 500 ("D"), and 100 ("C").

We furnish to order any other desired formula, the nature and quantity of which will admit of being presented in this form. Additions will constantly be made as demand may necessitate.

TABLET TRITURATE CASES

FOR PRICES SEE NEXT PAGE.

For the convenience of physicians using Tablet Triturates we offer the following neat cases.

CASE No. 1—Assortment A.

A folding pocket-case made of blue-black Russia leather, closing with a substantial clasp; length, $7\frac{1}{2}$ inches; width, $3\frac{3}{4}$ inches.

Two rows of 12 vials, each having a capacity of about 45 Tablet Triturates. The vials are closed with a metal screw cap.

REGULAR SELECTION:

No.	No.
68 Dover Powder, 1 gr.	257 Aconite, Tinct., 1 min.
72 Ergotin (Bonjean), 1-10 gr.	267 Ammon. chlor. & Hyoscyam. Co.
98 Mercury with chalk, 1-10 gr.	312 Calomel & Sodium bicarb., B "C."
117 Morphine sulphate, 1-16 gr.	314 Camphor monobrom., 1 gr.
126 Nux vomica, powd., 1-10 gr.	321 Cathartic Comp., Impr'd, 1-5 gr.
132 Pepsin Aseptic, 1 gr.	362 Digitalis, Tinct., 1 min.
142 Podophyllin, 1-16 gr.	454 Neuralgic (Dr. H. J. Kenyon).
151 Quinine sulphate, 1 gr.	618 Nitroglycerin Compound.
156 Santonin and Calomel.	625 Bismuth Compound.
186 Sodium salicylate, 1 gr.	628 Diarrhoea.
217 Aloin Compound, B "A."	630 Fever (Dr. T. G. Davis.)
239 Acetanilid, 1 gr.	645 Tonsillitis.

CASE No. 1—Assortment B.

No.	No.
13 Ammonium chloride, 1 gr.	186 Sodium salicylate, 1 gr.
19 Atropine sulphate, 1-100 gr.	195 Calomel, Ipecac & Sod. bicarb.
22 Bismuth subcarbonate, 2 grs.	203 Iron, Arsenic & Strych., B "A."
25 Caffeine, 1 gr.	213 Salol, 1 gr.
32 Calomel, 1-10 gr.	219 Aloin, Bellad., Strych. & Ipecac.
42 Cocaine hydrobromate, 1-8 gr.	239 Acetanilid, 1 gr.
45 Codeine, 1-4 gr.	253 Aconite root, fluid ext., 1-2 min.
68 Dover Powder, 1 gr.	322 Cathartic Comp., Improved, 1 gr.
98 Mercury with chalk, 1-10 gr.	624 Opium and Lead acetate, B "B."
107 Mercurous iodide, yellow, 1-8 gr.	628 Diarrhoea.
120 Morphine sulphate, 1-4 gr.	647 Cardiac Compound (Dr. Chas. L. Kerr).
148 Quinine bisulphate, 1 gr.	
156 Santonin and Calomel.	

When "Case No. 1" only is ordered, we shall furnish Assortment A; if B is desired, "Case No. 1, Assortment B," should be specified.

CASE No. 2.

A folding pocket-case made of a superior quality of Russia leather; having a single row of 12 metal screw-cap vials which hold about 45 tablets each; length of case, $6\frac{3}{4}$ inches; width, $3\frac{3}{4}$ inches.

REGULAR SELECTION:

No.	No.
68 Dover Powder, 1 gr.	257 Aconite, Tinct., 1 min.
72 Ergotin (Bonjean), 1-10 gr.	312 Calomel & Sodium bicarb. B "C."
117 Morphine sulphate, 1-16 gr.	321 Cathartic Comp., Impr'd, 1-5 gr.
142 Podophyllin, 1-16 gr.	362 Digitalis, Tinct., 1 min.
148 Quinine bisulphate, 1 gr.	625 Bismuth Compound.
217 Aloin Compound, B "A."	628 Diarrhoea.

(Continued on page 226.)

TABLET TRITURATE CASES—Continued.

CASE No. 3.

A folding pocket-case made of a superior quality of Russia leather; length, 7 inches; width, 4 inches; having one row of 8 cork-stoppered vials, each holding 100 tablets.

REGULAR SELECTION :

No.	No.
34 Calomel, 1-2 gr.	257 Aconite, Tinct., 1 min.
117 Morphine sulphate, 1-16 gr.	314 Camphor monobrom., 1 gr.
142 Podophyllin, 1-16 gr.	362 Digitalis, Tinct., 1 min.
148 Quinine bisulphate, 1 gr.	625 Bismuth Compound.

NET PRICES.

*Terms, net ; 30 days on approved credit ;
transportation charges extra.*

Tablet Triturate Case No. 1—assortment A.....	\$2.50
Tablet Triturate Case No. 1—assortment B.....	3.50
Tablet Triturate Case No. 2.....	1.75
Tablet Triturate Case No. 3.....	2.00

Please note that prices mentioned apply in each case to the *selection of formulæ indicated*, or any selection which will not average above \$1.50, List, per thousand tablets (except Case No. 1, "Assortment B," which is a special selection and exceeds the average). For instance, in making up a selection, provided the regular one is not satisfactory, take the thousand list price for tablets desired. In Case No. 1, 24 formulæ would be selected. Suppose the total footing for the 24 formulæ (1000 each) is \$36 00; dividing this by 24, the price would be \$1.50 per thousand, coming within the limitation. Wherever price exceeds this rate, a proportionate charge will be made.

Diurnal Tablet Triturates.

Owing to misunderstanding on the part of some, as to the nature and intent of DIURNAL TABLET TRITURATES, we are compelled to enter into more particular explanation by calling attention to the following facts:

1. These preparations were gotten up with the sole view of saving the physician all doubt and trouble as to the dose of certain toxic medicaments.

2. The *FULL daily dose*—i. e., the greatest amount permissible of administration during the period of twenty-four hours to an adult—is *TWELVE*. This does not indicate that 12 Diurnal Tablet Triturates *must* be habitually given, but that such is the *limit, even of excess!*

3. Twelve being a number easily divisible in consonance with the number of hours that constitute a full day, it is easy to regulate the dose to meet the demands of the individual case. One Diurnal Tablet Triturate every two hours for 6, 12, or 16 hours, represents respectively one-fourth, one-half and two-thirds of the *extreme* dose; a like dose is obtained by administering one tablet every eight, four, or three hours, for 24 hours.

4. Finally, it must be remembered that the *full dose*—i. e., the extreme maximum—is one that will *seldom be required*, and also that it will be reached only after continual progressive (accessive) administration of the drug.

Tablets priced at less than 75 cents per M are supplied in bottles of 100 at the uniform rate of 10 cents per 100.

For prices of Diurnal Tablet Triturate Cases, see Specialties, page 134; and for description, see note 64.

Chocolate Coated Tablets.

At the request of many of our patrons we have added to our list of medicinal products a line of chocolate-coated tablets, formulæ and prices of which are given herewith.

We guarantee these tablets to be made by the most approved processes and of the best materials.

In ordering, kindly specify "Chocolate Coated Tablets," to avert any possibility of mistaking for orders for either tablet triturates or compressed tablets. Numbers may be used.

Formulæ marked thus (†) are sent when other and similar formulæ are not specified.

DIGESTIVE FERMENTS.

We present to the medical profession a line of digestive agents which, by virtue of superiority and general excellence, has not only met with wide application but has done much to raise the absurdly low standards of strength which formerly prevailed. Of the many digestive preparations which appear in our list, the following deserve special mention.

See also note 167, "Taka-Diastase."

PEPSIN ASEPTIC.

We formerly marketed aseptic pepsins ranging in strength from one thousand (1:1000) to fifteen thousand (1:15000), but since the adoption of the rational standard digestive power of three thousand (1:3000) in the U. S. P. 1890, we have deemed it expedient to list only 2000, 3000 and 4000, which appear to cover all practical requirements. If, however, our customers desire any special strength, we shall be pleased to offer quotations.

We unhesitatingly pronounce these pepsins superior in every particular to any similar products now upon the market.

Strength. We are prepared to supply almost any digestive power desired.

Solubility. All are readily soluble.

Permanence. Practically free from peptone, they are remarkably permanent and will keep indefinitely under ordinary protection.

Purity. The absence of odor is the best testimony of their superiority in this particular, they being entirely free from all taint or suspicion of putrefaction.

Appearance. The scales are bright and clear, while the powdered product compares favorably with any and is very convenient for dispensing.

PEPSIN, U. S. P. 1890.

This official product will be found quite satisfactory for general use. One grain is capable of dissolving 3000 grains of freshly coagulated and disintegrated egg albumen. Our product is highly recommended as fully meeting the pharmacopœial requirements.

We furnish this on all unspecified orders for Pure Pepsin, although many pharmacists and physicians prefer to use our Pepsin Aseptic 1:4000, which was well established before the U. S. P. 1890 standard was adopted.

SACCHARATED PEPSIN, U. S. P. 1890.

Odorless and invariable. One grain will dissolve 300 grains of freshly coagulated and disintegrated egg albumen, thus fulfilling the requirements of the U. S. P. 1890. As most saccharated pepsins on the market are very weak, compared with this preparation, we particularly emphasize its strict conformity to the pharmacopœial standard.

We supply this product on all unspecified orders for Saccharated Pepsin.

The strength of Saccharated Pepsin, U. S. P. 1880, is one-sixth of the foregoing, one grain dissolving only 50 grains of coagulated egg albumen.

LACTATED PEPSIN.

This well known digestive agent is a mixture of pepsin, pancreatin, lactic acid, maltose, diastase, and hydrochloric acid. It has proved of unfailing benefit in many forms of indigestion. Lactated Pepsin is not protected by patent or trademark.

ELIXIR LACTATED PEPSIN.

This Elixir presents the properties of Lactated Pepsin appropriately combined with aromatics. It is an efficient digestive and an attractive placebo. Each fluidounce represents 80 grains Lactated Pepsin.

GLYCEROLE OF PEPSIN, CONCENTRATED.

A permanent glycerin solution containing the ferment in a remarkably active condition and in a form specially designed to meet the requirements of the dispenser and manufacturer. One minim will digest 300 grains of coagulated egg albumen. One minim is therefore equal to six grains of Saccharated Pepsin, U. S. P. 1880, or one grain of Saccharated Pepsin, U. S. P. 1890. It has an agreeable odor and taste. Combined with diluted hydrochloric acid it forms a highly concentrated artificial gastric fluid.

It forms clear solutions with syrup, glycerin, aromatic elixir and aromatic waters.

PEPSIN CORDIAL.

An artificial gastric fluid containing all the elements which are essential to peptic digestion. In potency it surpasses the elixirs, essences and wines of pepsin commonly met with in the market, while its flavor and general palatability will commend it to the most fastidious palate. In addition to its proteolytic power, it possesses the property of curdling milk and is therefore useful for the preparation of junket, or curds and whey. One teaspoonful will completely digest 3000 grains of coagulated and disintegrated egg albumen.

LIME JUICE AND PEPSIN.

An agreeable appetizer and aid to digestion; one teaspoonful will digest 1000 grains of coagulated and disintegrated egg albumen. A combination of superior lime juice with our aseptic pepsin fulfills a large number of indications, especially in those common cases where there is no well defined disease existing, but where there is a sallow complexion, loss of appetite, more or less derangement of digestion, a tendency to constipation, and a condition of general debility. It not only restores appetite and removes the dyspeptic symptoms, but it relieves the condition of physical and mental depression, and acts as a tonic by virtue of its digestive power. It should be taken immediately after meals, either clear or diluted with water. One or two teaspoonfuls constitute an ordinary dose.

SUGAR-COATED PEPSIN TABLETS.

Each containing the quantity of Pepsin Aseptic (1:3000) named. These tablets are readily soluble, are free from admixture with foreign substances, and will retain their digestive power indefinitely. They constitute an eligible means of administering pepsin, being at once free from objectionable taste and smell, easy to swallow, and convenient to carry when traveling.

Our chocolate-coated tablets, containing Pepsin Aseptic alone and in combination, are also very attractive.

PURE PANCREATIN.

This product contains all the ferments peculiar to the pancreatic secretion, presenting them in a highly active condition. It will convert casein or other albuminous matter into peptone and will saccharify starch. It is specially useful in the preparation of predigested or peptonized milk, transforming the albuminous constituents of this food into an assimilable form with remarkable rapidity. Five grains of our Pancreatin will completely peptonize one pint of fresh milk in from one to one-and-one-half hours, under conditions specified on the label.

LIQUID PANCREATIN, CONCENTRATED.

A preparation possessing in a high degree all the digestive properties of the pancreatic fluid. Two fluidrachms will peptonize one pint of fresh milk in from one to one-and-one-half hours, under conditions specified on the label. It is well adapted for the extemporaneous preparation of elixirs, wines, etc., and may be prescribed by physicians in suitable combinations. This product, like our pepsin cordial and concentrated glycerole of pepsin, is so made as to ensure the preservation of its several ferments in an active condition indefinitely. We unhesitatingly recommend it as a very superior product.

SACCHARATED PANCREATIN.

A combination of one part of our Pure Pancreatin with three parts of milk-sugar. It will be found very much more active than the usual commercial article, while its palatability will commend it for administration to children.

RENNIN.

A milk-curdling ferment, distinct from, but associated with, pepsin in gastric juice. See page 144, also Tablet Triturate 482 and note 142.

PEPTONIZING TABLETS, IMPROVED.

Put up in bottles of 30 tablets each. Each tablet contains: Pure Pancreatin, $2\frac{1}{2}$ grains; Sodium bicarbonate, $9\frac{1}{2}$ grains. For preparing peptonized milk, gruel, beef-tea, and other predigested foods for the sick. These tablets are presented as being more convenient and reliable than any heretofore offered to the medical profession. Full directions accompany each package.

DIGESTIVE TABLETS, B "A."

Useful in all forms of indigestion dependent upon deficiency in the activity of the secretions or upon indiscretion in eating. Physiologists sometimes criticise the formula on the ground that pepsin requires an acid medium, and pancreatin an alkaline one, to exert their digestive action, so that either one or the other must necessarily be wasted. We admit the seeming force of the objection, but contend that the positive experience which has approved these and similar combinations is more significant than all theoretical considerations of a merely negative character. We employ in these tablets our regular Pepsin Aseptic, which is ten times as strong as the saccharated pepsin, and a Pancreatin equal in digestive activity to any. Each tablet contains: Pepsin aseptic (1:3000), 1 gr.; Pure Pancreatin, 1 gr.; Calcium lactophosphate, 2 grs. See also page 206 for formula of Digestive Tablets, B "B."

DIGESTIVE TABLETS, LAMINATED.

Each tablet contains 3 grains of pure pancreatin coated with salol; covering the salol is a layer containing one grain Aseptic Pepsin (1:3000), the entire combination being coated with a heavy layer of sugar. When taken into the stomach, the sugar-coating is soon dissolved and the pepsin liberated where its digestive properties are required. The salol coating, being insoluble in the stomach, will carry the pure pancreatin into the duodenum, where this ferment will in turn be liberated in its proper field of action, having been protected from any injurious action which the gastric fluid might naturally exert on pancreatin exhibited in substance in the ordinary way.

It will be observed that we occasionally employ the term "pure" in speaking of digestive ferments, notwithstanding the fact that none of them has ever been completely isolated. We employ the word only in a relative sense, the quality of our products compared with others on the market certainly justifying such action.

The same remark applies to the designation "aseptic," which we have selected because our pepsin is almost entirely free from mucus, peptone, and products of decomposition.

Upon application it will afford us much pleasure to supply literature more fully descriptive of our complete line of Digestive Preparations.

FOOD PRODUCTS.

For Prices, See Specialties, pages 130 and 136.

BEEF-JELLY, MOSQUERA.

A concentrated, predigested and nutritious food product resembling in physical characteristics an extract of beef, but superior in all respects. The chief recommendation for this preparation over those with which it competes, lies in the process of manufacture, a proteid-digesting ferment being employed which converts all the naturally insoluble nutritive constituents of the beef into a soluble and predigested form. It is entirely devoid of the objectionable bitterness and disagreeable odor that have heretofore characterized products of this nature. It is well adapted as a food for convalescing invalids, or as a basis for soups and other dishes in the kitchen.

FLUID BEEF-JELLY, MOSQUERA.

This preparation is identical with our solid Beef-Jelly, except in form, its main feature of advantage being that it is readily miscible with either hot or cold water.

In the sick-room, Fluid Beef-Jelly is invaluable. In many cases of illness the hot beverages are distasteful and contra-indicated; here Fluid Beef-Jelly will be found most serviceable. Dissolved in ice-water, it forms a refreshing, nourishing and stimulating beverage, that will prove delicious even to the fastidious taste of an invalid. It will quickly relieve fatigue, exhaustion, and, in many cases, nervous prostration.

BEEF-MEAL, MOSQUERA.

A predigested powdered meat, representing in actual nutritive value six times its weight of good lean beef. It is entirely devoid of all objectionable taste or smell, and can be tolerated with ease

by the most delicate stomach. As distinguished from any similar product heretofore known, it contains all the constituents of the meat, whether soluble or insoluble, in a predigested form ready for assimilation.

For administration, Mosquera Beef-Meal may be mixed with any soup or broth having sufficient consistence to suspend it, or added to chocolate, in combination with which it makes a delicious beverage.

BEEF-CACAO, MOSQUERA,

Is a concentrated food consisting of Beef-Meal, a special grade of Dutch cacao, and sugar, in equal proportions. Beef-Cacao, aside from the nourishment yielded by the cacao and sugar, both of which are valuable foods, possesses just one-third the nutritive value of Beef-Meal. Mosquera Beef-Cacao so completely disguises the taste of its proteid constituents that the palate cannot detect their presence.

BEEF, IRON AND WINE.

This combination is a valuable stimulant, tonic and nutrient. We employ a peptonized extract of beef which is a true food, containing the proteid or tissue-forming material of the meat in a digested form, in addition to those mineral salts to which ordinary beef-extracts owe any value which they may possess, in combination with Tincture Citro-chloride of Iron. Dose, 1 to 4 fluidrachms (4 to 15 Cc.).

POWDERED BONE (Pure)

is prepared from carefully selected fresh beef bones, deprived of fatty matter and adherent fibrous and muscular tissue. Bone flour is a true food, not a medicine. It can be taken most readily by incorporating it with ordinary food. It offers to the digestive fluids a supply of phosphoric acid much more easily assimilated than that which is contained in the tough structure of the outer coating of cereals.

HÆMINAL.

A New Blood-Iron Albuminate.

Hæminal presents in a soluble form all the albuminates and salts (hæmoglobin, paraglobulin, phosphates) present in the blood, without, however, any of the objectionable excretory products—fibrin, urea, etc. Hæminal contains 0.25 to 0.30 per cent. of metallic iron in the form of hæmoglobin and hæmatin. It is a dark brown powder of a slightly acid taste, fairly soluble in cold water, and easily soluble in hot water without being coagulated; is also soluble in diluted alcohol—a most desirable property, which renders its administration possible with alcohol-containing restoratives (as wines, etc.). It is perfectly stable, and one part corresponds to about six parts of the fresh blood of a healthy bullock.

Hæminal will be found of excellent service in the management of chlorosis or anæmia, as well as in rachitis, scrofulosis, neurasthenia, and the digestive troubles that accrue to convalescence, etc. It may be confidently recommended in cases where other iron albuminates have proved unsuccessful. Of special importance is the large amount of soluble albuminous matter it contains.

Hæminal may be administered in doses of eight to sixteen grains, three to five times a day—preferably in the form of gelatin capsules, or dissolved in warm water.

TESTED PHYSIOLOGICALLY.

Standard Fluid Extract Ergot.

Claviceps purpurea (Fries) Tulasne.

Two years devoted to exhaustive chemical and physiological tests enable us to offer a Fluid Extract Ergot for internal administration which is perfectly reliable and uniform. *We believe this to be the only fluid on the market each cubic centimeter of which represents the full therapeutic activity of one gramme of Ergot of prime quality.*

As it has been fully demonstrated that this drug is not amenable to accurate chemical tests, and that the physical properties of the drug and its preparations are not reliable criteria of therapeutic activity, we subject every lot to thorough trial upon animals in our Biological Department. For price see page 22.

ERGOT ASEPTIC.

For Hypodermatic Administration.

*Sterilized, Non-alcoholic,
Concentrated, Permanent,
Non-irritant, Neutral,
Convenient, Active.*

As this preparation is sterilized in hermetically sealed containers, it contains no preservatives, which are irritating.

It is free from extractive matter, which causes abscesses.

It is concentrated — each bulb contains one cubic centimeter, representing two grammes of prime drug.

It is free from ergotinic acid, which (subcutaneously) acts as a paralyzant of the nerve-centers and causes abscesses.

As Ergot Aseptic is sterilized, it contains no bacteria; being hermetically sealed, it is protected from germ-infection.

We assure ourselves that every lot is possessed of full activity by subjecting it to physiological tests.

For price see page 135.

NOTES OF REFERENCE.

1. Abrus Precatorius Seeds (Jequirity). Jequirity was introduced early in 1883, as a remedy for pannus and trachoma (granular lids), on the authority of DeWecker, of Paris, and proved of value in the treatment of these affections by other eminent ophthalmologists, both of Europe and America.

2. Acid Phosphates, Liquid (Liquor Acidi Phosphorici). A nerve and brain food; relieves symptoms of mental exhaustion, such as sleeplessness, melancholia, etc.; is in considerable demand as a stimulating beverage, dispensed at the soda-fountain in place of an alcoholic stimulant. Each teaspoonful contains about 10 grains pure phosphoric acid (H_3PO_4), partly free, partly in combination with the bases calcium, magnesium, iron, sodium and potassium. Dose, $\frac{1}{4}$ to 1 fluidrachm (1 to 4 Cc.) in a glass of sweetened water. For price see page 129.

3. Acid Salicylic, from Oil Gaultheria. The synthetic salicylic acid of commerce is liable to be contaminated with various impurities; it is certainly not so beneficial in therapeutics as the pure natural acid obtained from oil gaultheria. For price see page 129.

4. Aconitine Pills, Tablet Triturates, etc. As substances exhibiting varying characteristics and great difference in therapeutic activity are being offered on the market under the name of Aconitine, we desire to call attention to the fact that we employ in the manufacture of our pills, tablets, and other products, a crystallized aconitine which responds distinctly to a physiological test in dilution of 1 part to 150,000; this alkaloid being very pure and about two hundred times stronger than good aconite root. It is vitally important that this highly potent aconitine be not confounded with the weaker preparations which are quite generally used, as the nature of the drug necessitates most careful and exact dosage. Aconitine should never be dispensed without positive knowledge as to whether it is the pure alkaloid or one of the weaker preparations.

5. Adonis vernalis, Lin. (False Hellebore). A valuable cardiac tonic. Its activity is due to a glucoside, *adonidin*, the physiological action of which closely resembles that of digitalin. Write for descriptive circular.

Although listed as *Adonis vernalis*, the species *A. æstivalis*, Lin., is also collected and used with the former, since the active principle adonidin is found in both in about the same proportions.

6. Alterative Compound. Known variously as Bamboo-brier Compound, Succus Alterans, Mist. Smilacis Co. This is a combination of vegetable alteratives for the treatment of secondary syphilis, recommended by Dr. J. Marion Sims. It has been superseded by an improved and more palatable combination known as Syrup Trifolium Compound. See note 171.

7. Alveloz Milk. Recommended for the relief of cancer. The plant which furnishes this milk-juice is native to the north of Brazil, where it is credited with most remarkable effects in the treatment of malignant tumors and ulcers. Write for descriptive circular. See p. 129.

8. Amyl Nitrite Pearls. These are shells of thin glass, each containing 2, 3, 4, 5, 8 or 10 minims of Amyl nitrite, packed in cotton, in boxes of one dozen. The patient may carry the box about his person, and, on the approach of a paroxysm, may crush a pearl in his handker-

chief, and by inhaling the vapor find prompt relief. Its action on the heart is almost instantaneous. It relieves angina pectoris, spasmodic asthma, epilepsy, syncope, etc. For price see page 129.

8a. Anhalonium, Anhalonium Lewinii, Henning. We formerly listed a tincture of Anhalonium, for which, however, there was so small a demand that in 1894 we discontinued its manufacture. Recently, through the labors of Drs. Prentiss, Morgan and others in America, Drs. Lewin and Heffter in Germany, and the U. S. Bureau of Ethnology, the attention of the medical profession has been called anew to the properties of this remarkable plant, and as a result physiological and clinical experiments are beginning to accumulate. We have therefore decided to restore Anhalonium to our list, but instead of the tincture we now offer an assayed fluid extract of the drug. Literature furnished on application.

9. Anodyne Pine Expectorant. A combination of astringents, sedatives and stimulating expectorants for the treatment of catarrhal conditions of the respiratory tract.

Each fluidounce represents:

White Pine bark, 30 grs.

Wild Cherry, 30 grs.

Balsam Poplar buds (Balm of Gilead), 4 grs.

Spikenard root, 4 grs.

Sanguinaria, 3½ grs.

Sassafras, 2 grs.

Morphine acetate, 3-16 gr.

Chloroform, 4 minims.

Dose, ½ to 2 teaspoonfuls (2 to 8 Cc.) every three hours. *Shake the bottle.*

For price see page 129.

10. Antacid Tablets, Compressed. A reprint of Dr. Roberts's paper, recommending the use of this remedy in dyspepsia and gravel, will be furnished upon application. See page 200.

11. Anti-diphtheritic Serum (*Diphtheria Antitoxin*) is prepared with all possible care and skill; every precaution known to bacteriological science is taken to insure its purity and reliability, and careful, exact experiments are conducted in our Biological Department in order to determine its value in antitoxic units. The containers are glass bulbs, hermetically sealed, the labels of which are tinted and numbered according to the dose within, which ranges from 500 units (for immunization and for mild cases) to 3000 units (for very severe laryngeal or complicated cases). The concentration is never less than 200 to 300 units per cubic centimeter; special concentration of 500 to 750 units per Cc. supplied without extra charge.

Local treatment with Loeffler Solution should not be neglected while using the Anti-diphtheritic Serum. See note 113.

Antitoxin Syringe. See Serum Syringes, note 157.

11a. Anti-Streptococcic Serum. An experimental remedy that seems to give good results in the diseases due to streptococci. For price see page 129.

11b. Anti-Tetanic Serum (*Tetanus Antitoxin*). This serum seems to be of great value as a preventive, but whether it is of any service after tetanic symptoms have developed is still undetermined. For price see page 129.

11c. Anti-Tubercle Serum. For tuberculosis. Good results are claimed by Maragliano, Paquin, and other experimenters. This serum is prepared, with all our customary care, from the blood of healthy horses which have been inoculated with gradually increasing quantities of the toxic products of the tubercle germ. Dose, 10 to 60 minims daily, beginning with the smaller amount; administer subcutaneously, with an aseptic syringe, after sterilizing the site of the proposed injection with 5-per-cent. carbolic acid. For price see page 129.

12. Antiseptic Soap, Ethereal (Johnston). A fluid soap valuable for preparing the skin of the patient and for cleansing the hands of the surgeon before and after surgical operations. Its fluidity insures contact with every portion of the hand and nails. For price see page 129.

13. Antiseptic Tablets. Convenient for surgical uses and all occasions where a reliable antiseptic solution of definite strength is required. For a 1:1000 solution, dissolve one tablet (Tablet Triturate No. 180) in 4 fl. ozs. wine measure, or 4 1-6 fl. ozs. imperial measure, of water; or a B "B" tablet (Tablet Triturate No. 615) in 16 fl. ozs. wine measure, or 16 3/4 fl. ozs. imperial measure, of water; or a B "D" tablet (Compressed Tablet No. 117) in 16 fl. ozs., wine measure, of water. For weaker solutions, increase the quantity of water proportionately. For formulæ and prices, see page 130.

14. Apiol, Red, P. D. & Co. After extensive experimentation we have succeeded in producing a red Apiol which is considered by many to be more potent than, and superior to, the ordinary green Apiol.

The low melting point of this camphoraceous body does not admit of its permanent preservation in the crystalline form, and we have therefore added to our list Red Apiol in Soluble Elastic Capsules, each containing 3 minims of a highly concentrated solution. See page 116.

15. Arnica, Fluid Extract. Unless orders expressly specify the official fluid extract of the root, we supply that of the flowers.

16. Bamboo-brler Root, Smilax Pseudo-China, Lin. King reports better results from the use of this in primary and secondary syphilis than from Sarsaparilla. Literature furnished upon application.

17. Bay Laurel, Concentrated Fluid, Myrcia acris (Swz.) DC. For the extemporaneous preparation of a superior quality of Bay Rum. This preparation is not, strictly speaking, a fluid extract, nor is it so labeled. It is included in this list only for convenience of reference. In the proportion of 2 fluidounces in one gallon of diluted alcohol, this fluid will produce a superior Bay Rum at a moderate cost. Used in accordance with instructions on the label, our Fluid Bay Laurel will prove a great convenience to the retail druggist, who is often disappointed in the result when he attempts to prepare Bay Rum according to published formulæ.

18. Berberine Alkaloid and its salts. Under the name Hydrastin we offer a concentration which contains the proximate principles of the root of *Hydrastis canadensis*, including the alkaloids hydrastine and berberine. We also prepare from the same root a hydrochlorate, a phosphate and a sulphate of Berberine, to which the improper names muriate, phosphate and sulphate of *hydrastin* have been respectively applied. On account of this nomenclature these salts of Berberine are generally looked for among alkaloidal concentrations, and we have, therefore, priced them under that head. A similar state of affairs exists with reference to the salts of Sanguinarine. See notes on Hydrastis preparations, page 114.

19. Berberis Aquifolium, Ph. A California drug, introduced by us in 1878. It has been claimed to possess extraordinary powers as a combined alterative and tonic. Send for descriptive circular.

20. Black Haw, Viburnum prunifolium, Lin. First introduced by us. Uterine tonic and sedative, specially valuable in threatened abortion, in dysmenorrhœa, and in uterine hemorrhage. This remedy is constantly growing in popularity, and is now recognized in the U. S. Pharmacopœia. Literature furnished upon application. See also "Liquor Sedans," note III.

21. Black Willow, Salix nigra, Marsh. Both the bark and buds of this plant are credited with tonic, carminative, stimulant, astringent and antispasmodic properties. Dr. J. Hutchison recommends it in cases of ovarian hyperæsthesia, uterine neuralgia, and spermatorrhœa. It is also a powerful sexual sedative, without the depressing properties of the bromides. Literature furnished upon application.

22. Blood-flower, *Asclepias curassavica*, Lin. Barham calls this plant Blood-flower, because of anti-hæmorrhagic properties. It is also said to be valuable in chronic gonorrhœa and gleet.

23. Boldo, *Peumus Boldus*, Mol. A South American tonic; employed especially in chronic hepatic torpor, and in atony of various organs where quinine cannot be tolerated. Also recommended in gonorrhœa, rheumatism and dyspepsia. Literature furnished upon application.

24. Bronchial Sedative, Palmer. Palatable, convenient and efficient; available in all forms of bronchial irritation. Each fluidounce contains: Ammonium chloride, 30 grains; Fluid Opium camphorated, 4 minims; Fluid Tolu, soluble, 8 minims; combined with glycyrrhiza and aromatics, q. s. Dose for adults, 1 fluidrachm (4 Cc.). For price see page 130.

25. Broom-corn Seed, *Sorghum saccharatum* (Lin.) Pers., is diuretic, sedative, demulcent, soothing to the irritated urinary organs, and employed in vesical catarrh, cystitis and irritable bladder. In the aged who are compelled to rise frequently at night to void their urine, it has produced great relief. It must not be confounded with broom-top (*Scoparius*). Dose for adults, 1 fluidrachm (4 Cc.).

26. Burdock Seed, Fluid Extract. Burdock root has long been known as an alternative of considerable value, and the fluid extract is official in the U. S. P. 1890. The fluid extract of the seed has been recommended for the treatment of eczema, psoriasis, etc.

27. Butternut, Solid Extract. This extract is prepared in strict accordance with the formula laid down in the U. S. P. 1890; it should not be confounded with the inferior aqueous extract, U. S. P. 1870. Customers desiring the latter should specify "Aqueous."

28. California Laurel. This drug was first brought to the notice of the profession by Dr. L. Mann Hammond, who recommended it highly in nervous headache, cerebro-spinal meningitis, atonic diarrhœa, and bilious colic. Literature furnished upon application.

29. Callsaya, Elixir. An agreeable tonic, representing 40 grains of the bark in each fluidounce. See also note 73.

30. Camphor Solution, Neutral. Contains 12.5% of re-sublimed camphor. Specially adapted for hypodermatic use and for inhalations. The neutral reaction and permanency of the solvent render this product far superior to all oily and alcoholic solutions thus far employed. The former become rapidly rancid; the latter are too volatile and leave the camphor in substance in the cellular tissue, tend to obstruct the needle of the syringe and the small tubes of the atomizer, and hence are objectionable for injections and inhalations.

Our Neutral Camphor Solution is permanent, non-irritating, flows freely from the syringe, and works to perfection with the Semple atomizing inhaler described in note 155. For price see page 130.

31. Capsules, Empty.—

Approximate Capacity of Our Empty Capsules.—The capacity of empty capsules varies according to the degree of compression exerted in filling and the known variation in bulk of a given weight of different samples of the same powdered drug or alkaloid.

DRUGS.	No.	No.	No.	No.	No.	No.	No.

32. Capsule Fillers. We are manufacturers' agents for :

The Raymond Capsule Filler. This apparatus is, from its simplicity and size, specially adapted to the wants of the physician who dispenses his own medicine. It may conveniently be carried with him and used at the bedside, a little experience in its use making the filling of capsules nearly as expeditious as the folding of powders.

The Acme Capsule Filler. This filler is offered as an improvement upon all others extant. It is composed of a nickel-plated base, funnel and incline, and four wooden slides, which are bored to fit and hold the seven sizes of capsules manufactured by us. This filler is very convenient and saves time and material in dispensing. For price see page 132. Send for illustrated circular.

33. Cardamom Compound, Fluid. We formerly made this preparation of twenty-two times the strength of Tincture Cardamom Compound, U. S. P. 1880, but having found so concentrated a solution of the drugs impracticable we now manufacture a fluid just eight times the strength of the U. S. P. 1890 tincture.

34. Caroba Leaves, Jacaranda procera, Sprengel. From Brazil. In addition to alterative properties, it ranks as a diuretic and sudorific. Used in all forms of syphilis, and specially recommended for old and indolent ulcers. Send for descriptive circular.

35. Cascara Amarga (Picramnia; species not yet determined). From Mexico. An alterative credited with effecting cures in chronic syphilitic eruptions, syphilitic tubercles, chronic eczema and gummatous tumors. The discovery, in our laboratory, of an alkaloid in this drug, confirms the belief that it is in reality a valuable remedy, which appears to be borne out by the rapidly accumulating clinical evidence.

36. Cascara Cordial. This preparation of Cascara Sagrada will be found so pleasantly combined with solvents and aromatics as to render it eminently deserving of the name of Cordial. It is valuable in the treatment of constipation, dyspepsia, indigestion and hæmorrhoids. Each liter contains: Cascara Sagrada bark (true Rhamnus Purshiana), 125 Gm.; Berberis Aquifolium root, true, 3.7 Gm.—combined with carminative aromatics. For price see page 132.

37. Cascara Sagrada, Rhamnus Purshiana, DC. This important drug was first introduced by us in 1877, since which time it has become universally known, and is now official in the United States and several European countries. Long familiar to the Spanish residents of the Pacific coast as a sovereign remedy for habitual constipation, it has proved one of the most valuable additions to our materia medica. The chief objection to Cascara Sagrada heretofore has been its extreme bitterness; but investigation of its constituents at our laboratory and elsewhere has led to the discovery of new principles, and we are now able to offer the following line of comparatively tasteless preparations of this drug, the medicinal efficacy of which, on account of the destruction of the bitter principle, is still a subject for further clinical investigation:

Fluid Extract Cascara Sagrada (formula of 1887); permanent, perfectly miscible with water, and almost free from bitter taste. Specify in ordering, "Formula of 1887."

Fluid Cascara Sagrada Aromatic is introduced to meet a demand for a more palatable preparation than the Fluid Extract Cascara Sagrada (R 1887), and one which, at the same time, might be exhibited in smaller doses than the Cordial.

Care should be taken, when our *Fluid Cascara Sagrada Aromatic* is supplied, to specify *P. D. & Co.*, otherwise some other product may be supplied.

Cascara Cordial, see note 36.

Cascara Sagrada Compound, see page 20.

Solid Extract Cascara Sagrada (formula of 1887) is permanent, and will, therefore, make a pill mass which does not soften or decompose on keeping. It is readily soluble in water and in the liquids of the gastric juice, and nearly tasteless in solution. When made into pills alone, the only excipient needed is a small quantity of powdered althæa. Tragacanth, recommended by some, should be avoided, as pills made with it harden gradually, with impairment of their solubility. Specify in ordering, "Formula of 1887, P. D. & Co."

Cascarin (our concentration; formula of 1887), as presented in scale form, is not hygroscopic, is readily reduced to powder, almost tasteless, soluble in water, and contains only the active constituents of the drug. Specify in ordering, "Formula of 1887, P. D. & Co."

Literature on *Cascara Sagrada* mailed free on request.

38. Cathartic Compound Pills, U. S. P., and Cathartic Vegetable Pills, U. S. P. Our Cathartic Compound Pills are prepared strictly in accordance with the requirements of the U. S. Pharmacopœia, the essential ingredients being strictly pure and of prime quality. Each pill contains the full amount of our standard extracts of *Colocynth Compound* and *Jalap*. See note 56 on *Compound Extract of Colocynth*.

We have devoted special attention to so preparing these pills that their ready solubility is insured, particularly with reference to the fact that they are employed usually in conditions where the gastric secretions are of an acid character. As the ingredients are mostly of a resinous nature and usually insoluble in acid liquids, the ready disintegration of our pills is a matter worthy of consideration.

39. Cedron Seed, Simaba Cedron, *Planch.* From New Granada. Tonic, antispasmodic and antiperiodic. Used in malarial diseases, in intestinal tormina and in neuralgia. Also said to be useful in the treatment of poisonous bites. Send for descriptive circular.

40. Cerebral Sedative Compound, B "A." A reliable and efficient nerve sedative. Each fluidounce contains: Chloral, 120 grs.; Potassium bromide, 120 grs.; Tincture Opium, 40 minims; Fluid extract Gelsemium, 25 minims. Dose, $\frac{1}{2}$ to 1 fluidrachm (2 to 4 Cc.).

We also prepare a **Cerebral Sedative Compound, B "B,"** which is identical with the B "A," except that the tincture Opium (40 mins.) is replaced by the same quantity of tincture *Hyoscyamus*. Dose, $\frac{1}{2}$ to 1 fluidrachm (2 to 4 Cc.).

For prices see "Compound Cerebral Sedative," page 133.

41. *Cereus grandiflorus*, *Mill.* Night-blooming *Cereus* (*Cactus grandiflorus*, *Lin.*). In view of the facts that the three species possess identical medicinal properties, and that the supply of *C. grandiflorus*, once scarce, is now abundant, we omit *C. Bonplandii* and *C. McDonaldii* from our list. Literature furnished on application.

42. Chaparro Amargoso, Castela Nicholsoni, Hook. Tonic, antiperiodic, antiseptic and astringent. Recommended for diarrhoea and dysentery by the medical profession of Mexico and the Southern United States; is considered almost a specific. We supply a fluid extract of this drug. Dose, 30 to 60 minims. Please send for literature.

43. Chaulmoogra Oil, *Gynocardia odorata*, *R. Brown.* Claimed to be a powerful alternative, and reliable remedy in leprosy. It has been found of great service in rheumatism, scrofulous swellings, sprains, lupus and various skin diseases. For price see page 132. Literature sent on application.

44. Chekan, *Eugenia Chequen*, *Mol.* Introduced as a remedy for winter cough, by Dr. Wm. Murrell, of London, and since found to be of great value in chronic catarrhal affections of the respiratory organs. Dr. Dessauer highly recommends Chekan in affections of the mucous membrane, and ascribes to it tonic, expectorant, diuretic and antiseptic properties. Literature furnished on application.

45. Chian Turpentine. Recommended by Dr. Clay as a remedy in cancer. We are very careful regarding the quality and genuineness of this article. The consistency of the turpentine will vary somewhat, depending on its age or recent collection. For price see page 132. Literature furnished on application.

46. Chlor-Anodyne. An efficient and pleasant remedy for colic, cholera morbus, neuralgia, spasmodic pains, etc. It is of great value where antispasmodics or anodynes are indicated. Concentrated in form and rapid in action, it is invaluable in the pocket cases of physicians. Each fluidounce contains: Morphine hydrochlorate, 2 7-8 grs.; Fluid Indian Cannabis, 46 minims; Diluted Hydrocyanic acid, 9 minims; Chloroform, 46 minims; Oil Peppermint, 1 1-2 minims; and Tinct. Capsicum, 1 1-2 minims. Dose for an adult, 15 minims frequently repeated. The exact formula accompanies each bottle. For price see page 132. Literature sent on request.

47. Cinchona, Detannated, Fluid Extract. Our fluid extract Cinchona, detannated, will be found very convenient for the extemporaneous preparation of elixirs, etc., in which it is required to combine Cinchona bark with Iron.

48. Cinchona, Fluid Extracts. Our assayed fluid extracts, as well as Normal Liquids, of Cinchona Calisaya and Red Cinchona are prepared from barks which contain the full proportion of alkaloids required by the U. S. Pharmacopœia.

We manufacture a fluid Cinchona Compound for preparing the Compound Tincture of the U. S. P. Under the title of Liquid Cinchona Compound, we supply a fluid for preparing the Tincture Cinchona Compound of the British Pharmacopœia.

We have discontinued the manufacture of the obsolescent Fluid Cinchona, Pale, Comp. for Huxham Tincture, since the Tinctures Cinchona Compound of the U. S. P. and B. P. are designed to be official representatives of the preparation formerly employed under the name "*Huxham's Tincture.*" (See also note No. 49.)

49. Cinchona, Pale, Fluid and Solid Extracts. Our solid extract is regulated by assay so as to contain 15 per cent. of the alkaloids of the bark, and represents, in one part, five parts Standard Pale Cinchona bark.

Inasmuch as Pale Cinchona bark which will meet the requirements of the U. S. P. 1890 is not available in commerce, we continue to manufacture a fluid extract Cinchona, Pale, containing 3 per cent. alkaloids, as heretofore. (See also note 48.)

49a. Citrated Caffeine. In the manufacture of our tablets we employ Citrated Caffeine, U.S.P., in view of the fact that true caffeine citrate is merely a chemical curiosity possessing no therapeutic properties that do not reside in a mixture of equal parts of caffeine and citric acid. The revision committee of the U. S. P. 1890, knowing that true caffeine citrate immediately splits into citric acid and caffeine in the presence of water, wisely omitted this expensive salt, and adopted instead the official mixture, under the name Citrated Caffeine. This product possesses all the essentials of a soluble caffeine salt, and is supplied by reputable manufacturers when citrate of caffeine is ordered.

50. Coca Cordial. This cordial presents Coca in a palatable form: the astringent and bitter constituents of the drug are rejected, while care is taken to retain unchanged the true active principle, cocaine. One fluidounce of the cordial represents 60 grains of Coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor. The specific uses of such a preparation will suggest themselves at once to the physician. It may be given in doses of a dessertspoonful to a tablespoonful, repeated as occasion requires, and is frequently advantageously combined with liquid acid phosphates or the official diluted phosphoric acid. For price see page 132.

51. Coca, Erythroxylon Coca, Lam. This drug possesses in a remarkable degree the property of sustaining the vital powers under conditions of extraordinary fatigue and privation. Medicinally, it is specially useful in cases of nervous exhaustion, mental depression, and in the treatment of the opium habit.

See *Esencia de Coca*, note 74.

52. Cocaine Hydrochlorate. We supply this salt of Cocaine in small and large crystals. When ordering, purchasers should be careful to specify the form of crystallization desired, as we invariably supply the small crystals unless the large are specially ordered. Ophthalmologists will appreciate the purity of these salts, especially that of our large crystals, for which we claim absolute purity and perfect freedom from the objectionable contaminations which are frequently present in the amorphous salt. It should be borne in mind that under all circumstances we supply this salt in the form of CRYSTALS, and even our small crystals are superior in purity to the so-called GRANULAR salts of some manufacturers. For price see page 132.

53. Cocaine Hydrochlorate Tablets, 1½, 2¼ and 3 grs., for the ready preparation of Cocaine solutions of definite strengths. The question of making a solution is now reduced to its simplest form. Let the physician provide himself with a drachm vial. Then if he wishes to

make a 2-per-cent. solution, all that is necessary for him to do is to put a $1\frac{1}{2}$ -grain tablet in the vial full of distilled water. For a 4-per-cent. solution, use a $2\frac{1}{4}$ -grain tablet; for an 8-per-cent. solution, use two $2\frac{1}{4}$ -grain or four $1\frac{1}{2}$ -grain tablets; and so on. These tablets are supplied at a price which makes it no economy for the physician to use Cocaine in the unprepared form for solutions, especially when it is remembered that Cocaine solutions should always be freshly prepared. They commend themselves to the ophthalmologist in connection with our line of Ophthalmic Tablets (see page 100). For price see page 132.

54. Cocillaña, Guarea (species undetermined). Synonym—*Sycocarpus Rusbyi*, Britton. Dr. R. W. Wilcox, of the Post-Graduate School, New York City, emphatically declares that this drug can fully replace ipecacuanha in every sphere of action, and in many cases may be substituted with advantage for apomorphine, ammonium carbonate, strychnine and other drugs classed with more or less reason as expectorants. Clinical experience seems also to have established the fact that it exerts a marked tonic influence upon the appetite; that it reduces the night-sweats of chronic bronchitis and phthisis without inducing constipation, etc. Send for reprints of the latest reports made in medical journals, etc.

54a. Cod-Liver Oil, Improved Lofoten. A pale, translucent, bland and palatable oil, extracted by an improved process from the fresh and healthy livers of Lofoten codfish. To those (and their name is legion) who regard cod-liver oil as a food, valuable because of its ready assimilability and the small per cent. of phosphoric and other organic compounds it contains, our Improved Lofoten offers the advantages of purity, concentration, permanence, and elegance. For price see page 133. Our illustrated brochure on "The Lofoten Islands and Their Principal Product" will be mailed free to all physicians or druggists who apply for a copy.

55. Cod-Liver Oil, Egg Emulsion (formula of L. B. Hewitt). The acacia, Irish moss, etc., of ordinary emulsions have long been a standing objection to this form of administering Cod-Liver Oil, while at the same time egg emulsions were unavailable on account of their instability. This last difficulty is now overcome, and the formula of our Egg Emulsion enables us to incorporate 40 per cent. of Cod-Liver Oil with no other emulsifying agent than eggs and no other flavoring than a fine quality of brandy. We claim for this product: perfect emulsification; unequalled nutritive properties; palatability; permanency; miscibility (with water, milk, wine, etc.); and elegance. For price see page 133.

55a. Coley's Mixture of Erysipelas and Prodigiosus Toxins. For the treatment of malignant neoplasms, particularly sarcoma. To Dr. Coley, of the New York Cancer Hospital, is due the chief credit for what progress has been made in the erysipelas therapy of malignant tumors. Acting upon the suggestion afforded by the fact that erysipelas had been known to put an end to tumors which had given every evidence of being malignant, and the further fact that erysipelas had been induced by direct inoculation, Dr. Coley began his experiments. In 1894 he had reached the conclusion that the best preparation for his purpose consisted of a mixture of erysipelas and prodigious toxins, unfiltered, including therefore the dead bodies of the germs themselves. In a paper published in the *American Journal of the Medical Sciences* for September, 1896 (abstract of which we will send to any physician or druggist on application), Dr. Coley reports 160 cases treated by means of the toxins in various forms; this list includes eighteen successful cases of his own and a number reported by other surgeons.

The dose, to begin with, is very small—not more than half a minim if injected into the tumor itself, or from one to two minims subcutaneously in non-vascular tissue, gradually increasing until appropriate reaction is induced.

For price see page 133.

56. Colocynth and Colocynth Comp. Extracts. The U. S. Pharmacopœia directs that these extracts be reduced to a powder. We therefore offer them only in the powdered form, which affords obvious advantages for dispensing.

Our extract of Colocynth is prepared strictly in accordance with the

U. S. P., the directions to exclude the seeds being conscientiously observed. The preparation will be found extremely active, entirely soluble in appropriate menstrua, and free from inert and oleaginous matter.

Our **Compound Extract of Colocynth** is prepared from the choicest materials available. We use therein extracts of Colocynth and Jalap which are strictly U. S. P. 1890, and have devoted considerable effort to secure access to the sources of pure Scammony. The latter article is always subjected to careful tests in order to establish its purity, even though the producers are known to be entirely reliable. The remaining ingredients are likewise subjected to tests of identity and purity, so that the final product may be considered as being an ideal extract. We supply only the Powdered Extract Colocynth Compound, which is the official form.

57. Concentrations, Alkaloidal. In view of the dangerous similarity in name between certain concentrations and the alkaloids they contain, a resemblance which might occasion fatal mistakes through mere inadvertence, we have effected some very desirable changes in appellation (see page 46). Due references are made, that no confusion will result from the innovation.

58. Condurango, Gonolobus Cundurango, Tri. Although Condurango has not entirely justified the claims made for it in the treatment of cancer, experiments have demonstrated its utility as a stomachic, and in the form of Condurango wine it has grown to be much in demand. One fluidounce of the wine represents 60 grains of Condurango bark. Dose, one-half to one fluidounce. We supply the wine, and also a fluid extract of this drug, and shall be pleased to mail full descriptive literature on request.

59. Corn-silk (Stigmata Maydis). Now official in the U. S. P. under the title *Zea*. A remedy in inflammatory affections of the bladder, acute or chronic, idiopathic or traumatic. It is diuretic, demulcent and antiseptic in its action, and is reported to be specially valuable in cases in which decomposition of the urine takes place in the bladder, giving rise to vesical irritation.

Green Corn-silk is a drug of wonderful delicacy, since its therapeutic principle, maizenic acid, will undergo decomposition through fermentation within twenty-four hours. As a consequence the fluid extracts made from dried or partly fermented drug are inferior. Such fluids are readily distinguished by their dark color, molasses-like odor, and general absence of natural flavor. In order to produce a fluid extract of best quality we exhaust the silk within five hours after it is stripped from the corn. The superior quality of our preparation is indicated by its light color and characteristic odor and taste.

Send for descriptive circular.

60. Coto Bark (Para-Coto). First introduced by us. Dr. Von Guk, of Hamburg, concludes, after several trials of this drug, that it is almost a specific against diarrhœa. It is also recommended in dysentery, cholera morbus, colic, gastric catarrh, rheumatism and gout. Send for descriptive circular.

NOTE.—Two distinct kinds of bark are brought from Bolivia under the name of Coto bark. They are now distinguished as "Coto" and "Para-Coto," respectively. The therapeutic properties ascribed to the two drugs are similar, but in physical appearance they are strikingly different. Although there is reason to believe that the true Coto bark is at least as efficient a medicine as the Para-Coto, our patrons have so generally expressed a preference for the latter on account of its being less pungent, after making its acquaintance under the name of Coto, that we invariably supply it when Coto bark is ordered.

60a. Cubeb Oleoresin. This oleoresin is designed to replace solid extract Cubeb, which was omitted from our list because its inevitable separation into two layers was a source of annoyance to ourselves and our customers.

The oleoresin Cubeb we offer is made in strict accordance with the requirements of the Pharmacopœia. The cost of its manufacture has not been reduced by the use of acetone and other cheap solvents in place of the official ether. We guarantee its absolute purity. For price see p. 134.

61. Culture Media. We supply the following Culture Media in glass tubes, sterilized and practically hermetically sealed; they are always ready for use:

GELATIN:

- No. 1. Nutrient Gelatin.
No. 2. Glucose Gelatin.
No. 3. Litmus Gelatin.

AGAR:

- No. 4. Nutrient Agar.
No. 5. Glycerin Agar.
No. 6. Glucose Agar.

BLOOD SERUM:

- No. 7. Blood Serum, according to Dr. Koch.
No. 8. Blood Serum, Loeffler's mixture for growing diphtheria germs.

EMPTY TUBES:

- No. 9. Empty test tubes, sterilized, plugged with cotton, and rubber-capped.
No. 10. Tube with sterilized swab for making cultures from the throat.

Put up in wooden cases, 12 tubes of any assortment in each case.

The various kinds of Gelatin and Agar Culture Media, as well as Bouillon, will also be supplied in bulk in half-liter flasks, to enable physicians to refill the tubes.

Culture Media for laboratories and boards of health in 50-tube lots.

The reaction of our Culture Media is uniform, 15 on the Massachusetts scale. For prices, see page 134.

62. Damiana, *Turnera microphylla*, DC. Tonic and diuretic, with a reputed specific effect upon the sexual organs. Its reputation as an aphrodisiac appears to be sustained, and it is recommended in all cases of atonic sexual debility in male or female. Send for descriptive circular.

63. Dialyzed Iron and Dialyzed Iron Glycerated. Each fluidounce contains 24 grains Ferric oxide, equivalent to 16.79 grains metallic iron. Free from disagreeable taste, having no injurious action on the teeth, stomach or bowels, it is suited to cases where other forms of iron are not tolerated.

By an improvement in the manufacture of our Dialyzed Iron, we are able to furnish a product that does not congeal. Upon exposure to a very cold temperature, however, it is liable to freeze in part, thus rendering its transportation during extremely cold weather, perhaps, hazardous. We therefore take the liberty to substitute the glycerated product when we deem it unsafe to ship the plain solution. The Glycerated Dialyzed Iron differs from the regular solution only in containing one-eighth of its volume of chemically pure glycerin, which protects it from freezing during shipment in very cold weather.

64. Diurnul Pocket Case.—We have prepared, for the convenience of the physician, a leather Pocket Case containing the following selection of Diurnules, each bottle holding from five to six full daily doses:

Aconitine.
Arsenous acid.
Atropine.
Cocaine hydrochlorate.
Digitalin.
Gelsemine hydrochlorate.
Mercuric chloride, corrosive.
Mercurous iodide, yellow.
Morphine sulphate.
Physostigmine sulphate.
Podophyllum resin.
Strychnine nitrate.

We have also for the convenience of physicians a **Diurnal Tablet Triturate Case** similar in design to above, but containing eight vials, each holding 100 tablets of the formulæ Nos. 1000, 1004, 1007, 1012, 1015, 1028, 1032, and 1042. See pages 91 and 134.

65. Duboisia Leaves, *Duboisia myoporoides*, *R. Br.* Effects are similar to those of belladonna, but it is less of a cerebral excitant and more of a calmative and hypnotic. It has been found useful in relieving night sweats of phthisis, puerperal mania, vesical tenesmus, etc. Literature furnished on application.

66. Echinacea angustifolia, *DC.* Very strong claims have been recently made for this drug as an alterative of great value in all strumous and syphilitic indications. Old chronic wounds, varicose ulcers, etc., have yielded to its use after resisting other alteratives and compounds, etc. It is also stated to be a remedy in the treatment of snake-bites, and as a prophylactic in hydrophobia. Clinical reports are solicited from those having experience in the use of the drug. Literature furnished on application.

67. Embella Ribes, *Burm.* An effective anthelmintic in cases of *tænia solium* where male-fern, kousso and pelletierine fail; reported as a specific in rheumatism. Dr. R. N. Khory classes it as an alterative tonic, and employs it in chronic skin diseases. Literature sent on request.

68. Discontinued.

69. Ephedra antisiphilitica, *C. A. Meyer.* A leafless shrub indigenous to Arizona, New Mexico, etc. On the plains this plant is regarded as a specific in gonorrhœa, gleet, etc. Literature sent on request.

Ergot Aseptic (P., D. & Co.), see page 244.

70. Ergot, Ethereal, Fluid Extract. No claim is made for any superiority in this preparation over our standard fluid extract. The active constituents in both are the same, and both are prepared from prime drug. We confidently recommend our Fluid Extract and our Normal Liquid as possessing in a superior degree the therapeutic properties of Ergot. Send for literature.

71. Ergot, Solid Extract. This extract is prepared by our improved process; one grain represents the full medicinal activity of five grains of drug of best quality. The therapeutic efficiency of each lot is assured by physiological test.

We regard the hypodermatic use of solutions of extract of ergot as irrational, and sometimes dangerous. For hypodermatic use we would recommend our ERGOT ASEPTIC. See page 244.

72. Eschscholtzia californica, *Cham.* Reported to be soporific and analgesic, and, above all, harmless. The drug is a very useful anodyne in certain cases. The inconveniences attributed to the use of opium, such as gastric disturbance, constipation, etc., have not in any case been observed to attend the employment of this drug. It may possibly with advantage replace opium preparations for children. Literature sent on request.

73. Esencia de Calisaya. Each fluidounce of Esencia contains the equivalent of 40 grains of Calisaya bark. The prevailing preparations of Cinchona are most unpleasant and in many instances are repugnant to the patient by reason of their intense bitterness. This quality is very thoroughly masked by the combination of aromatics herein employed, and consequently Esencia de Calisaya has been found most acceptable where other Calisaya products have been rejected. It may be exhibited in every instance where Cinchona is indicated, inasmuch as it possesses all the qualities of this drug in the proportions above described. For price see page 135. Literature furnished on application.

74. Esencia de Coca. An agreeable liqueur representing in concentrated form the stimulating properties of Coca leaves; of exceptional value as a stimulant, for which purpose a dose of a tablespoonful, as required, will be found most desirable. If taken in such quantity just after meals it will materially aid digestion. For price see page 135. Literature furnished on application.

75. Eucalyptus, *Eucalyptus globulus*, *Lab.* First introduced by us. It has been recognized by the U. S. P. committee, and the fluid extract is now official. Our fluid extract is prepared from the true Australian leaves, and is specially recommended in malarial diseases, and for its influence on the mucous membrane in croup, diphtheria, catarrh, etc. Literature furnished on application. We direct attention to our EUTHYMOL, for which see note 76.

75a. Euformol. Each fluidounce contains: Oil Eucalyptus, 3-8 min.; Oil Gaultheria, 3-10 min.; Thymol, 1-2 gr.; Menthol, 1-12 gr.; Boric acid, 12 grs.; Fl. ext. Wild Indigo, 1-4 mins.; Formaldehyde (40%), 60 mins. Euformol is non-toxic, and does not stain. Its antiseptic and disinfectant properties have been rigorously tested in our Biological Department, and its remarkable germicidal power thoroughly proven. It will quickly remove putrid odors from decomposing animal and vegetable matter, combining with sulphuretted hydrogen and ammonia bases generally to form inodorous compounds. As a prophylactic in infectious diseases, as whooping-cough, diphtheria, croup, typhoid fever, etc., etc., or as a deodorant in the sick-room or sleeping apartments, Euformol should be used in the form of a fine spray for fifteen to twenty minutes, about three times daily. It is well adapted for the thorough disinfection of instruments and for cleansing the hands. Put up in 4-, 8-, and 16-ounce bottles, also in half-gallon bottles on special order. For price see page 135.

76. Euthymol. A "liquid" antiseptic which, by reason of its being neither poisonous nor irritant, is perfectly safe in any form of administration, internal or external. It possesses an agreeable odor, and may in many cases be substituted for more powerful but offensive antiseptics. The formula will indicate its wide range of usefulness. Each fluidounce contains: Oil Eucalyptus, 3-8 minim; Oil Gaultheria, 9-32 minim; Fluid ext. Wild Indigo, 1-4 minims; Boric acid, 10-15-16 grs.; Menthol, 5-64 gr.; Thymol, 15-32 gr. This article should not be exposed to cold. Use as a spray; or internally, in doses of one fluidrachm (4 Cc.) three or more times daily. Full descriptive circular sent on application.

We also manufacture **Euthymol Tablets** containing a combination of Oil Eucalyptus, Thymol, Boric acid, Oil Gaultheria and Menthol with aromatics, and possessing mild antiseptic properties, suitable for general internal administration. Particularly serviceable in inflammations of the mouth and throat, and in removing from the breath unpleasant odors arising from fermentative decomposition of food in certain forms of indigestion.

Euthymol Cream, which combines Euthymol with pure, stable emollients, is a superior toilet requisite, available for every purpose for which cold cream or the many proprietary toilet pomades and ointments are recommended. These properties are supplemented by the peculiar antiseptic and germicidal virtues of Euthymol. The family physician will find in Euthymol Cream a product he can conscientiously recommend when his advice is incidentally sought with reference to a certain class of toilet requisites.

Euthymol Tooth Paste.—A combined detergent for the teeth and harmless germicidal antiseptic for the mouth. It possesses the antiseptic properties of Euthymol, combined with detergents and aromatics, and forms a toilet accessory that is not only agreeable to use but beneficial in the maintenance of good health.

Euthymol Powder. This preparation is a combination of neutral absorbent talcum, the essential antiseptic constituents of Euthymol, and a delicate perfume. It is free from starch, flour and sugar, and contains no bismuth or other mineral salts. It allays irritation, destroys all objectionable odors, and inhibits bacterial growth. While primarily intended to be a baby-powder, it is eminently fitted for use as a toilet accessory.

For prices of Euthymol products see page 135.

77. Euphorbia pilulifera, Lin., exerts a peculiar influence over the respiratory apparatus, rendering it a valuable remedy in all bronchial affections. It is more especially esteemed for the prompt relief it is said to give to sufferers from asthma. Send for literature.

78. Fluids vs. Fluid Extracts. Fluids differ from the regular line of fluid extracts in that one liter of the fluid does not represent one kilo of the drug. Although included for convenience of reference in our list of fluid extracts, they are labeled simply Fluid Aloes, Aloes and Myrrh, Asafetida, Bay Laurel, Benzoin Compound, Cardamom Comp., Cascara Sagrada Aromatic, Catechu, Wild Cherry for Syrup, Ginger, soluble, for Syrup, Lavender Comp., Capsicum and Myrrh, Opium concentrated and Opium camphorated, Rhubarb Aromatic, Rhubarb, sweet, and Tolu, soluble, for Syrup, the strength of each being

stated on the label. The term *fluid extract* is properly applied only to preparations which represent the crude drug in the normal proportion of liter for kilo, or, approximately, of minim for grain.

Liquids vs. Liquid Extracts. We make a similar distinction in our line of preparations based on the British Pharmacopœia. We therefore list Liquid Aloes for B. P. tincture, Liquid Benzoin Comp. for B. P. tincture, Liquid Cardamom Comp. for B. P. tincture, Liquid Cinchona Comp. for B. P. tincture, Liquid Rhubarb for B. P. tincture, etc.

78a. Formaldehyde, 40-per-cent. Solution. As a deodorant and disinfectant in sick-rooms and in dealing with contagious diseases, formaldehyde is very highly esteemed. Putrid odors are promptly neutralized and pernicious micro-organisms destroyed by its vapors, no injury being done to delicate fabrics in the process when properly conducted. For general use it should be freely diluted. For price see page 135.

79. Gelatin-coated Pills. On account of the transparency of the gelatin coating, these pills should not be exposed to direct sunlight. This precaution applies especially to pills containing such sensitive salts as yellow mercurous iodide; mercuric iodide, red; soluble ferric phosphate; quinine sulphate, bisulphate or hydrochlorate, etc., which darken rapidly under influence of light. By an improved process of manufacture our gelatin pills are completely enveloped in the coating. The use of needles is thereby avoided and the liability to deterioration from atmospheric influences very materially lessened, while the danger of needles breaking off in the pills is entirely obviated.

80. Gelsemium. A scientific study of the constituents of this drug has convinced us that the revisers of the Pharmacopœia acted wisely in adopting the dried root. Gelsemium is not an exception to the rule that, for the preparation of tinctures, fluid extracts, etc., a properly seasoned air-dried drug is to be preferred in all respects to a green one. To supply the surviving demand for the fluid extract of the green root, we shall continue the manufacture of this preparation. We supply the official fluid extract (from freshly dried root) in all cases where "*green root*" is not specified.

81. Glonoin. Spirit of Glonoin should be kept and transported in securely stoppered bottles or tin cans, and should be stored in a cool place remote from lights or fire. Great care should be exercised in handling, since a dangerous explosion may result if any considerable quantity of it be spilled and the alcohol be partly or wholly lost by evaporation. For price see page 135.

81a. Germicidal Soap (McClintock). This is a germicide rather than a soap, made up in the form of cakes for the sake of convenience and for the auxiliary effect of the saponaceous material upon the mercuric salt as the required solution is made. It has been thoroughly tested by the originator with pus, cholera, typhoid and diphtheria germs, and anthrax spores. In none of the hundreds of experiments has a single one of the germs survived *one minute*. The Soap solution contained, in each 5000 parts, only one part of the antiseptic material. In later experiments the pus germs were killed by solutions of 1 to 20,000 and 1 to 30,000. Tested in comparison with the above, other antiseptics in the same percentage of solution, during the same time, with similar cultures of germs, etc., permitted bacterial growth as follows: Mercuric chloride, after five minutes; Mercuric iodide, after 15 minutes; Corrosive-sublimate soap, after 15 minutes (as long as tested); Carbolic acid, 5%, after 15 minutes (as long as tested).

The great objection to the ordinary mercury antiseptics has been that they coagulate albumen and attack nicked and steel instruments, rendering it necessary for the surgeon to use one antiseptic for his hands and another for his instruments. *This Soap does not coagulate albumen, and does not affect nicked or steel instruments.* It does act on silver and aluminum.

The body of this Soap is prepared from pure vegetable oils. It is naturally white. We have, however, deemed it advisable to color it blue—not to cover defects, but to indicate its toxic nature in accordance with the precedent established in the coloring of our poisonous Antiseptic Tablets, etc.

Reprints of Dr. McClintock's original paper and other literature will be furnished on application. See page 135.

82. Glycerin Emollient. A sterilized combination designed to take the place of vaselin and other oily lubricants, in gynecological and surgical examinations. Formula: Oil Gaultheria, 2 Gm.; Boric acid, 23 Gm.; Corn Starch, 88 Gm.; Pure Glycerin, 885 Gm.; Tragacanth, 17 Gm. For price see page 135.

83. Glycerin Suppositories. These suppositories have been successfully employed in the treatment of certain forms of constipation, both in adults and children. Experience has shown that perfect solution is not indispensable to their activity, but that they are capable of producing a laxative effect without any considerable loss of weight. For price see page 135.

84. Grindelia, Fluid Extract, and Fluid Extract Grindelia, U. S. P. Although the latter is the official preparation—manufactured in strict accordance with the formula prescribed by the U. S. P. 1890—it will only be furnished when clearly specified on orders. The reputation of Grindelia is largely based upon the use of the former, our regular fluid extract, which we shall continue to manufacture with an alkaline-aqueous menstruum, as at first introduced by us to the medical profession. Our Fluid Extract Grindelia is miscible with syrup and aqueous fluids without precipitation: Fluid Extract Grindelia, U. S. P., is not. Literature furnished on application.

85. Guaco Root, Agave planifolia, Watson. This species is an alexiphormic that enjoys a very high reputation in Mexico and Central America as a remedy for rheumatic affections, and is said also to have tonic, alterative, and febrifuge properties. We have lately discovered that this plant is a species of *Agave*, and not of *Mikania* as had been supposed.

86. Guarana, Paullinia Cupana, Kunth. Guarana contains from 4 to 5 per cent. of caffeine, a larger proportion than is found in any other drug. Moreover, the caffeine exists in this drug in a very soluble form, so that its action is very prompt, and the effect is greater than that produced by an equivalent quantity of the pure alkaloid. As a remedy in sick-headache, Guarana has no rival. It may be employed wherever caffeine is indicated. See also Elixirs, page 105. Send for literature.

87. Hawthorn Berries, Cratægus Oxyacantha, Lin. The fluid extract is highly extolled by Dr. M. C. Jennings, of Chicago, as a remedy in heart disease. An interesting account of the Doctor's experience, embracing forty-three apparently successful cases, is given in the *New York Medical Journal* of October 10, 1896. Reprints mailed on application.

88. Helonias Compound. It will be observed that we list Fluid Extract Helonias Compound and also Fluid Extract Squaw-vine Compound, both of which are prepared from the same formula. The existence of an established demand for Fluid Extract and Elixir of Helonias Compound and for Fluid Extract and Syrup of Squaw-vine Compound prompts us to list and label the fluid extract under both titles to avoid confusion and to meet the requirements of the trade.

89. Hematic Hypophosphites. This combination is adapted to a great variety of diseased conditions. It is specially useful in debility or depraved nutrition, in anæmia and nervous prostration, in consumption, and in all scrofulous and tubercular affections. Our preparation is a permanently clear syrup, while others of a similar formula deposit an unsightly precipitate. Each fluidounce contains: Potassium hypophosphite, 1 1-2 grs.; Manganese hypophosphite, 1 gr.; Strychnine hypophosphite, 1-8 gr.; Ferrous hypophosphite, 1 1-4 grs.; Calcium hypophosphite, 1 gr.; Quinine hypophosphite, 7-16 gr. Dose, 1 to 2 fluid-drachms (4 to 8 Cc.). For price see page 136.

90. Hoang-nan, Strychnos malaccensis, Benth. This drug has long been used in the East Indies as a very effective remedy for leprosy, scrofula, malignant ulcers, eczema and other skin diseases. Literature mailed upon application. See page 136.

For price of concentrated tincture, see list of Fluid Extracts, page 24.

91. Horse-nettle Berries, *Solanum carolinense*, *Lin.* Our fluid extract, made from fresh berries, is recommended in tetanus, and particularly in epilepsy and the albuminuria convulsions of pregnancy.

Horse-nettle Root has the same properties as the berries, and is considered by some physicians to be more active.

Literature furnished on application.

92. Humulin; Lupulin. Being convinced that no concentration can be prepared which shall contain in the form of a permanent powder a satisfactory proportion of the oleoresinous constituents to which hops chiefly owe their activity, we have omitted from our list the concentration Humulin, and supply in its place a superior quality of Lupulin, U. S. P., of a recent crop.

Huxham Tincture. See note 48.

92a. Hydriodic Acid, Concentrated Solution, 16-per-cent. For the extemporaneous preparation of syrup hydriodic acid. This is a crystal clear, colorless product, free from all liability to deteriorate. Mixed with pure syrup in the proportion of one to fifteen, the result is 1-per-cent. syrup hydriodic acid; by varying the proportions, any strength desired may be obtained. The chemical alteration so prone to occur in the official syrup upon standing any considerable length of time, is obviated by the employment of this concentrated solution. For price see page 136.

93. Hydriodic Acid, Syrup of. We offer two preparations of Hydriodic Acid; one being the official U. S. P. syrup containing one per cent. of the acid; the other containing two per cent. of true hydriodic acid. The latter has been prepared to meet the wishes of those physicians who desired to employ smaller doses than were necessitated by the use of the official product. Please specify which is desired. For prices see page 136. Literature furnished on application.

94. Hypodermatic Tablet Cases.

Aluminum Hypodermatic Case. The recently discovered process by which aluminum has been so cheapened as to bring it within the reach of the industrial arts, has been taken advantage of by us in improving our Hypodermatic Case. Our new case is, therefore, very light, compact, and not liable to tarnish. For illustration see next page.

Each case contains an improved hypodermatic syringe, with special features described below; two needles; a supply of extra wires for cleaning purposes; and an assortment of hypodermatic tablets in vials of 25, viz.: Nos. 2, 3, 5, 13, 16 and 72 (see pages 97 and 99).

The points of excellence which will commend the hypodermatic syringe as supplied by us are as follows:

1. *A mechanism* which, by the turning of a nut on the upper side of the plunger, will prevent leakage by forcing the leather attachment of the plunger outward, so as to accurately fill the space between the plunger and the barrel.

2. *The ease with which the needle may be cleaned*; beveled sides guide the wire to the perforation, avoiding the repeated probings against the square-cut floor of the cap chamber which constitute such a vexatious feature of other syringes.

3. *The needle is strengthened* by a sheath embracing the upper half—the part most liable to give way.

For price of case see page 136. Send for illustrated circular.

For description of Case No. 2 and Pocket Case, see page 265.

95. Hypodermatic Case, Lee's Improved. (*When ordering please specify "Lee's," otherwise our regular aluminum case will be sent.*) In order to meet the requirements of those physicians who prefer a leather hypodermatic case, we have introduced one designed by Dr. Elmer Lee, of Chicago, Ill., which is convenient in size and shape for all practical purposes, complete in every detail, includes a larger assortment of tablets than usual, provides space for a fever thermometer (which instrument, however, we are not in a position to supply) and for prescription blanks, and is marketable at a price within the reach of every practitioner. The 13 tubes of hypodermatic tablets provided are Nos. 2, 3, 5, 9, 11, 13, 15, 16, 17, 20, 22, 31, and 72 of our regular list (see pages 97-99. Send for illustrated circular.

Our **Aluminum Hypodermatic Case, No. 2**, recently introduced, is in every respect the same as the case described on page 259 (note 94), except that it contains a tube vial of six

aseptic needles (Schimmel's patent), with the necessary connections, instead of the mounted needles which screw directly into the barrel of the syringe. The physician who employs the "aseptic" needles may replenish his stock at a cost of 50 cents for the half-dozen, and will therefore find it in every way advantageous to discard a needle once used on an infected patient.

For price see page 136.

In addition to our complete cases, with syringe, etc., we have just introduced a **Hypodermatic Tablet Case** (pocket size, *leather*), containing the following assortment of 12 tubes of 25 tablets each:

- No.
2. Apomorphine hydrochlor., 1-10 gr
 43. Atropine sulphate, 1-60 gr.
 5. Cocaine hydrochlorate, 1-4 gr.
 99. Codeine sulphate, 1-4 gr.
 9. Digitalin, pure, 1-100 gr.
 16. Morphine and Atropine, B "H."
 14. Morphine sulphate, 1-8 gr.
 13. Morphine sulphate, 1-4 gr.
 64. Nitroglycerin, 1-50 gr.
 72. Strychnine nitrate, 1-40 gr.
 70. Strychnine sulphate, 1-60 gr.
 73. Strychnine sulphate, 1-30 gr.

Our hypodermatic tablets are invariable as to strength, and always reliable. For prices see pages 93-100.

For price of Hypodermatic Tablet Case see page 136.

Literature on our hypodermatic tablets and cases will be supplied on application.

96. Hysterionica, *Aplopappus Baylahuen*, *Remy*. Recommended in malarial and chronic dysentery, flatulent dyspepsia, diarrhoea, etc. Literature furnished upon application.

97. Indian Hemp, Fluid Extract. Indian Hemp is the Indian Cannabis, *Cannabis Indica*, of the U. S. P., a powerful narcotic. Black Indian Hemp is the *Apocynum* of the U. S. P. (*Apocynum cannabinum*, *Lin.*), a drug totally distinct in its properties from the former. We follow the U. S. P. in calling the latter Fluid Extract Apocynum.

White Indian Hemp (*Asclepias incarnata*, *Lin.*) is not recognized by the U. S. P. 1890. We have adopted a rule to supply Fluid Extract of Indian Cannabis when Fluid Extract Indian Hemp is ordered (without specification of "Black," "White" or "Foreign").

98. Infiltration Anæsthetic (Schleich) Tablets. The tablets are designed for the extemporaneous preparation of solutions No. 1, No. 2 and No. 3, in accordance with formulas laid down by Dr. C. L. Schleich, and presented in papers relative to Infiltration Anæsthesia contributed by Dr. H. V. Würdemann, of Milwaukee, Wis., and Dr. Weller Van Hook, of Chicago.

FORMULA No. 1.		FORMULA No. 2.		FORMULA No. 3.	
Cocaine hydrochlorate,	3 grs.	Cocaine hydrochlorate,	1 1-2 grs.	Cocaine hydrochlor.,	1-6 gr.
Morphine hydrochlorate,	1-3 gr.	Morphine hydrochlorate,	1-3 gr.	Morph. hydrochlor.,	1-12 gr.
Sodium chloride,	3 grs.	Sodium chloride,	3 grs.	Sodium chloride,	3 grs.

For price see page 137. Literature supplied on application.

99. Iron and Manganese (Aromatic), Solution of, is a neutral organic solution of Iron and Manganese in the form of their saccharates, combined with aromatics, and contains 0.6 per cent. of metallic Iron and 0.1 per cent. of metallic Manganese. It presents a clear, reddish-brown liquid, pleasant in taste, devoid of disagreeable astringency, is readily assimilable by the weakest stomach, and does not affect the teeth. Its palatability and freedom from acidity have called forth hearty endorsement from patients. Its therapeutic effect in anæmia, chlorosis, etc., is everywhere acknowledged by the medical profession. Dose for adults, one teaspoonful to one tablespoonful three times a day; for children, a half to one teaspoonful three times a day, before meals. For price see page 144.

100. Iron Chloride Syrup, Formula of Dr. Geo. W. Weld. The official tincture of ferric chloride is without doubt one of the most important medicaments in the materia medica. Owing, however, to its corrosive action on the teeth and extremely disagreeable taste, it is often seriously objected to. In Syrup Iron Chloride (Weld), we offer a preparation which is both pleasant and harmless. Each fluid-ounce represents forty drops of the tincture, and when diluted with four or five times its volume of water this syrup makes a mixture which is grateful to the palate, without any suggestion of the disagreeable features peculiar to its medicinal constituents. This syrup should never, under any circumstances, be mixed with mineral or other alkaline waters. For price see page 144. Literature furnished upon application.

102. Jamalca Dogwood, Piscidia Piscipula (Lin.) Sarg. This drug has taken an important place in the materia medica as an anodyne and hypnotic; it does not produce unpleasant secondary effects. We use only the bark of the root, and not the cheaper and inferior bark of the tree. This drug forms also one of the component parts of Liquor Sedans (see note 111). Literature furnished on application.

103. Jambul Seed, Eugenia Jambolana, Lam. Recent chemical and clinical experiments seem to prove that this drug exercises an inhibitory influence upon the action of diastatic ferments, and that it possesses the unique and valuable property of arresting the formation of sugar in diabetes depending on increased production of glucose. The bark also is used, but Dr. Claicus considers the seeds much more active. Dose of bark or seed, 5 to 10 grains (0.3 to 0.65 Gm.) three times a day. We prepare a fluid extract of the seed. Literature furnished on application.

104. Jurubeba. Much valued in Brazil as a remedy in all cases of obstruction of the abdominal viscera, particularly of the liver, and in vesical catarrh. It is claimed to be tonic, anti-blennorrhagic and anti-syphilitic. There are two plants employed indiscriminately under this name—*Solanum paniculatum*, *Lin.*, principally in the northern, and *S. insidiosum*, *Mart.*, in the southern part of Brazil—their therapeutic effects being said to be identical. Clinical reports are needed.

105. Kamala, *Mallotus philippinensis* (Lam.) Muell. Arg. A valuable anthelmintic; has been long employed with success in India for the expulsion of tapeworm; may be employed alone, or in combination with aspidium or pumpkin-seed. Send for descriptive circular. See S E. Capsules, page 119.

106. Kavakava, *Piper methysticum*, Forst. From the Sandwich Islands. First introduced by us. An efficient remedy in gonorrhœa, gleet, rheumatism and gout. Descriptive circular mailed on application.

106a. Kino. In view of its inherent propensity to gelatinize, we have discontinued the manufacture of Fluid Kino, and offer instead a Tincture Kino made from a superior quality of drug in strict accordance with the U. S. P. formula.

107. Kola Nut, *Cola acuminata* (Beauv.) Schott & Endl. Dr. Bernard Schuchardt, of Gotha, is the author of a most exhaustive work entitled "Die Kola-Nuss in ihrer commerciellen, Kulturgeschichtlichen und medicinischen Bedeutung" (Rostock 1. M., 1851); he thus concludes with regard to its medicinal properties: "Kola should accordingly be employed as a diuretic in heart disease, and especially in conditions of feeble heart; in neuralgias; in severe fevers of adynamic character and during the period of convalescence after the latter; in exhausting diseases; in dyspepsia; in chronic and obstinate diarrhœas; in cholera; and, finally, as an excitant and exhilarant in cases of mental depression." Literature furnished on application.

108. Kouso Flowers (Cusso), *Hagenia abyssinica* (Bruce) Gmelin. In Abyssinia, Kouso is regarded as a specific for tapeworm. It is prescribed in combination with other agents, such as pomegranate, pumpkin-seed or aspidium. Send for circular.

109. Lily-of-the-valley, *Convallaria majalis*, Lin. A valuable cardiac tonic, diminishing the frequency and increasing the strength of the heart-beat. In action it closely resembles digitalis, and like that drug is an active poison in overdoses. It has no cumulative action, and in cases of cardiac neurosis it gives relief where digitalis and other remedies have failed. We furnish fluid extracts of the flowers, the rhizome and roots, and the herb—upon all unspecified orders the fluid extract of the root, which is official in the U. S. P. 1890 under the title Fluid Extract *Convallaria*, will be supplied. The properties of each are similar, though the herb contains a less proportion of convallamarin than either the root or flowers. Send for literature.

110. Lippia Mexicana, *Lippia dulcis*, Trev. Concentrated Tincture. Recommended in coughs due to catarrhal inflammation of the respiratory passages. Literature mailed on request.

Liquids vs. Liquid Extracts. See note 78.

111. Liquor Sedans. A utero-ovarian sedative and anodyne. Each fluidounce represents: Black Haw, 60 grs.; Hydrastis, 60 grs. (represented by hydrastine); Jamaica Dogwood, 30 grs.; combined with aromatics. Dose, $\frac{1}{2}$ to 1 fluidrachm (2 to 4 Cc.). It being impracticable to entirely disguise the very disagreeable taste of the drugs, we have put up this preparation in the form of Soluble Elastic Capsules, each representing one fluidrachm of Liquor Sedans; for price see page 118. Please send for reprint of Dr. R. W. Wilcox's article on "Hydrastis, Viburnum and Piscidia in the Diseases of the Female Organs of Generation," reprinted from the *New York Medical Journal*.

We also manufacture a *Liquor Sedans without sugar*, which may be exhibited in all cases when sugar is contra-indicated.

For prices see page 137.

Liquor Tritici. See note 172.

112. Lithium Citrate, Effervescent Tablets. Diuretic, anti-rheumatic; indicated in Bright's disease of the kidneys, albuminuria, stone in the bladder, renal and biliary calculi, rheumatic gout, etc.

We now supply two sizes of Lithium Citrate Tablets—3 grains and 5 grains. One tablet dropped into a glass of water promptly dissolves and forms a sparkling draught of lithia water superior to and more concentrated than most of the natural spring waters.

113. Loeffler Solution, for the Local Treatment of Diphtheria. Professor Loeffler, of Greifswald, was the first to suggest this mixture, which is applied as follows: The affected parts are first rubbed thoroughly with a small pledget of dry cotton wound around an applicator bent at right angles to the handle, or around a dressing forceps; after this has been done, a pledget of absorbent cotton is saturated with the solution and *pressed firmly* against the diphtheritic membrane for ten seconds, the application being immediately repeated, and again within three or four hours, and three times a day thereafter. Of 71 patients treated by this method from the outset, all were saved, while only one death occurred out of 26 cases treated after the second day of the attack. The Solution is prepared after the following formula: Menthol, 10 grammes; Toluene, q. s. to make 36 Cc.; then add Creolin, 2 Cc.; Ferric chloride solution, 4 Cc.; Alcohol, q. s. ad 100 Cc. See also note 11 on Anti-diphtheritic Serum. For price see page 138. Send for literature.

114. Malt Preparations. Having fully satisfied ourselves that a carefully prepared Extract of Malt is possessed of great value as a therapeutic and dietetic agent, we have installed an elaborate plant for its manufacture, and are, therefore, in a position to offer a very superior product. Our Malt Extract and its combinations will be found to possess the nutritive and digestive qualities of Malt to a remarkable extent. Nothing but a carefully selected Canadian Malt is used in their preparation, and every lot is subjected to the most rigid tests before issue. Their palatability renders them exceedingly easy of administration. We shall be glad to furnish descriptive literature and also full directions for determining the digestive activity of these products, upon application. For prices see page 139.

115. Malt Extract with Yerba Santa. This preparation presents the active constituents of Eriodictyon with a nutritive Malt Extract, in place of the inert vehicles generally employed. It is specially indicated in ordinary coughs, colds, and all irritations of the bronchial membranes. Each fluidounce represents 30 grains Eriodictyon.

116. Manaca, Brunfelsia Hopeana, Benth. In Brazil, Manacá is regarded as a specific for the cure of rheumatic affections, and the results obtained in this country have been very gratifying. Besides the fluid extract we manufacture an elixir which combines these virtues with those of the salicylates of sodium, potassium and lithium, thereby rendering it specially valuable in the treatment of cases of lithic diathesis. Literature furnished on application.

117. Medicine Dropper and Bottle, Graduated, consisting of a graduated bottle with a capacity of 4 drachms of liquid. The tablets may be dissolved in the necessary amount of water, and the bottle closed by the pipette of improved form, the ground sides of which fit into the neck of the bottle as a stopper, the whole forming an air-tight container. The pipette is closed at the top by means of a rubber diaphragm which, when pressed down and then released, will cause some of the solution to ascend the tube. By again gently pressing the diaphragm one or more drops can be easily forced out. For price see page 139. For list of Ophthalmic Tablets, see page 100.

118. Menthol, Genuine Japanese, in Crystals. A camphoraceous substance derived from *Mentha arvensis*, *Lin.* It is employed for the relief of neuralgic pains, headache, toothache, etc., and is valuable as an antiseptic inhalation in acute or infusorial catarrh. It is an agreeable remedy, and makes an acceptable substitute for the ordinary smelling-salts. Its properties require it to be kept tightly enclosed to prevent rapid volatilization. For price see page 139. Send for descriptive literature.

119. Menthol Pencils. Each one is put up in a neat Aluminum case. These pencils greatly facilitate the local application of

Menthol, and may be easily carried in the pocket. They will be found more salable and convenient than any form of menthol cones. For price see page 139. Send for descriptive circular.

120. Discontinued.

121. Mercuric Oxide, Yellow. Yellow Mercuric oxide is a powerful antiseptic, preventing the putrefactive changes which often take place in ingested food, and thus indirectly insuring nutrition, restoring appetite, and removing dyspeptic symptoms. Useful in all acute or chronic derangements of the alimentary tract, in typhoid fever, phthisis, convalescence from surgical diseases, and where the functions of the liver are deranged. We manufacture the compressed tablets of yellow mercuric oxide, recommended by Dr. Rose (*Medical Record*, April 25, 1885), each containing 1-200 grain (about $\frac{1}{2}$ milligramme) yellow mercuric oxide—dose, 1 to 3 tablets after dinner; also tablet triturates, 1-200 and 1-100 gr.

122. Microscopical Slides of Disease Germs. We are supplying from our Biological Department typical slides of the most important disease germs, carefully stained after the most approved methods.

- No. 1. *Bacillus of tuberculosis* (in sputum).
- No. 2. *Bacillus of diphtheria* (pure culture).
- No. 3. *Pseudo-diphtheria* (pure culture).
- No. 4. *Pneumonia* (in blood).
- No. 5. *Coli communis* (pure culture).
- No. 6. *Typhi abdominalis* (pure culture).
- No. 7. *Cholera Asiatica* (pure culture).
- No. 8. *Erysipelas* (pure culture).
- No. 9. *Gonorrhœa* (in gonorrhœal pus).
- No. 10. *Staphylococcus pyogenes aureus* (golden pus).
- No. 11. Tetanus.
- No. 12. Bubonic plague.
- No. 13. Yellow fever (Sanarelli).
- No. 14. Symptomatic anthrax (black leg).
- No. 15. Anthrax.
- No. 16. Hog cholera.
- No. 17. Chicken cholera.

We are prepared to supply single slides from the above list, and slides of other disease germs, but there will be an additional expense in making mounts of such single slides. The slides should be kept in the dark, as all aniline colors fade in the sunlight. For prices see page 140.

123. Mountain Sage (*Sierra Salvia*), *Artemisia frigida*, Willd. A diuretic and a nerve stimulant, employed, in its habitat, as a remedy for "mountain fever." Literature mailed on request.

124. Mulrapuama, *Liriosma ovata*, Miers. Correspondents in Brazil have assured us that this plant is more highly valued there as an aphrodisiac and nerve stimulant than is damiana with us in North

America. Clinical reports are solicited from physicians having experience in its use, in order that its range of therapeutic application may be established. Literature mailed on request.

125. Mutisia viciifolia, Cavanilles. According to a report in *Fortschritte der Medicin*, by Dr. Sacc, of Cochabamba, Bol., this drug possesses the enviable property of curing phthisis and every affection of the respiratory organs. A drug introduced as having such specific properties should receive the earnest attention of the medical profession. Literature mailed on request.

126. Nasal Tablets. We manufacture the following compressed tablet for the special use of rhinologists. For preparing extemporaneously solutions to be used in douche or spray, they will be found invaluable. One tablet dissolved in 2 to 4 ounces of warm water will form a satisfactory solution.

NASAL:

Sodium bicarbonate, 5 grs.
Sodium borate, 5 grs.
Sodium chloride, 5 grs.
Sodium benzoate, 7-24 gr.
Sodium salicylate, 7-24 gr.

Oil Eucalyptus, 7-48 μ .
Thymol, 7-48 gr.
Menthol, 7-96 gr.
Oil Gaultheria, 7-96 μ .

NASAL, IMPROVED:

Sodium chloride, 5 grs.
Sodium borate, 5 grs.
Menthol, 3-50 gr.

Thymol, 3-50 gr.
Oil Eucalyptus, 3-50 μ .
Oil Gaultheria, 3-100 μ .

PLASMA NASAL (Dr. Murray McFarlane):

Sodium chloride, 5 1-2 grs.
Sodium sulphate, 1 1-2 grs.
Sodium phosphate, 1-4 gr.
Potassium chloride, 2-5 gr.

Potassium sulphate, 1-4 gr.
Potassium phosphate, 1-3 gr.
Menthol, 1-15 gr.

Plasma Nasal Tablets form an ideal improvement over both Seiler's and Dobell's solutions for cleansing purposes. One tablet added to two ounces of lukewarm water makes a solution of about equal specific gravity with blood serum, and the use of such solution prevents undue osmosis and endosmosis in the nasal cavity. The addition of the menthol will be appreciated for its well known soothing effect.

127. Newbouldia laevis, Seem. This drug, introduced as an astringent, has been successfully employed in cases of dysentery when other remedies had failed. Its use is suggested in menorrhagia and in all cases where a venous astringent is required. Send for literature.

128. Nuclein Solution, 5-per-cent. (formula of Drs. Vaughan and McClintock). Nuclein is a non-poisonous germicide, found in various vegetable and animal cells, also in blood serum, the bactericidal properties of which are due to this constituent. The Nuclein administered probably has but little direct germicidal power, but it seems to stimulate the nuclein-forming tissues of the body; and probably, being closely allied to the nucleins of the body, it serves as a readily assimilable food. When, for example, yeast-nuclein is given, it may be at once converted into the nuclein of the white blood-corpuscles or spleen, and then in turn destroy the invading germs and their products.

The results of the administration of Nuclein in tuberculosis have been remarkably good. It has also been used with good effect in tonsillitis, streptococcus diphtheria, and indolent ulcers. The use of Nuclein is rational, not empirical therapy, and the results thus far reported indicate that it will have a wide field of usefulness.

This solution contains 5 per cent. Nucleinic acid from yeast. It can be used either hypodermatically or internally.

Dosage: Hypodermatically, 10 to 60 minims; dilute with equal parts of freshly boiled 0.6% salt solution. Internally, one-half teaspoonful, increased to one teaspoonful as rapidly as can be borne by the patient; mix with a small wineglass of water and administer on an empty stomach thrice daily (between meals and at bedtime). In the treatment of a chronic disease like tuberculosis the Nuclein must be given regularly for a long time.

The 5-per-cent. solution hypodermatically causes little if any more pain than the 1-per-cent. solution which we formerly listed. If, however, a 1-per-cent. solution is preferred, it can easily be prepared by adding

one part of 5-per-cent. solution to four parts of recently boiled water. Keep the bottle cool and free from contamination.

For price see page 140. Literature furnished on application.

129. Discontinued.

130. Nuclein Syringe. See Serum Syringes, note 157.

131. Opium Assayed, Aqueous and Deodorized, and Camphorated, Fluids. These fluids are not fluid extracts, but are indexed under that head for convenience, each label explaining their exact nature. The Fluid Opium *aqueous* and *deodorized* is essentially identical with the U. S. P. tincture of deodorized opium; the Fluid Opium *camphorated* is precisely eight times the strength of the camphorated tincture of opium, U. S. P. 1890 (paregoric). Attention is directed to the increased strength of the U. S. P. tincture (opium), which now contains 6 grains of crystallized morphine (equal to 7½ grains of morphine sulphate) in each fluidounce.

132. Opium Preparations, Standard. All our preparations of Opium are adjusted to a fixed standard strength by careful assay, this strength being in each case stated distinctly on the label. For the fluid preparations, except the camphorated fluid and fluid opium concentrated, assayed, our standard is 6 grains of crystallized morphine (equal to 7½ grains of morphine sulphate) to the fluidounce. The Fluid Opium camphorated contains 2 grains to the fluidounce; and the Fluid Opium concentrated, assayed, which is four times the strength of the tincture opium, U. S. P. 1890, contains 24 grains in each fluidounce. Our solid extract and powdered extract contain 18 per cent. of crystallized morphine. Send for circular.

133. Discontinued.

134. Ox-eye Daisy, Chrysanthemum Leucanthemum, Lin. has come into notice through its very favorable influence in checking the night sweats in phthisis. Other clinical reports are yet necessary to an accurate knowledge of its therapeutic applications. Literature mailed on request.

Pepsin and Pancreatin Products. See pages 140-141 and 239-242.

135. Physiological Tests. Quite a large number of important drugs cannot be standardized chemically. For example, the chemist may examine two samples of Indian Cannabis and find that, so far as his tests go, they are exactly alike, yet when given to animals or patients one may be very active and the other entirely inert.

We have established a pharmacological laboratory for testing drugs of this class. Here samples of the crude drugs are tested on animals; if the test is satisfactory, the drug is then made into pharmaceutical preparations. Samples of these finished preparations are again examined and tested physiologically before they are bottled.

Among the more important drugs that we test in this way are the following: Ergot, Indian Cannabis, Digitalis leaves, Digitalin, Strophanthus seeds, Strophanthin, Convallaria majalis, Convallamarin, Elaterium, Cocaine, etc.

Our supplies of Indian Cannabis and Ergot are bought from samples, which are forwarded to us by our collectors for physiological test before purchase. As a rule, more than one-half of the samples submitted are entirely worthless. After the purchased drug comes to our laboratory it is again tested before it is made into pharmaceutical preparations.

Send for our illustrated brochure, "Pharmaceuticals Physiologically Proved."

136. Pichi, Fabiana imbricata, Ruiz and Pav. Diuretic, tonic, terebinthinate. Pichi enjoys a great reputation in Chili in the treatment of urinary diseases. Dr. Ramirez, of Valparaiso, regards it as useful in catarrhal inflammations of the urinary tract, but not adapted for treatment of organic kidney disease; he speaks very highly of its use in dyspeptic disorders. Dr. Rodriguez, of Buenos Ayres, points out its value in vesical catarrh produced by mechanical irritation of gravel or calculi, and in the uric acid diathesis. It allays irritation, and favors the expulsion of calculi. Clinical reports are solicited. The medicinal vir-

tues of pichi reside in oleoresinous constituents, which are insoluble in water and separate from the fluid extract upon the addition of aqueous liquids. In order to overcome this objection and to present a more desirable form of this valuable remedy, we have added to our list of products, **Soluble Elastic Capsules of Pichi**, each containing five grains of a specially prepared extract representing the active medicinal constituents of 25 grains of drug. Descriptive literature embracing clinical reports mailed on request. A more recent addition to our list is **Elixir Pichi Compound**.

137. Pills of Rare Alkaloids. In view of the fact that many of our patrons have found it impracticable to keep in stock a complete line of pills of some of the more expensive and newer alkaloids, etc. (especially when the limited demand for such pills is considered), we put up the same in bottles of 25 each. This will prove convenient to both the trade and profession, and will enable the latter to give some of the newer alkaloids a clinical trial, which they would not feel warranted in doing were they obliged to purchase a large quantity of pills of one kind at a time. The pills are also supplied in bottles of 100. Quotations will be found in the general list of Pills.

138. Podophyllin, Soluble. This preparation, containing the essential ingredients of Podophyllum resin, is entirely soluble in aqueous liquids, and, being comparatively tasteless in solutions of moderate strength, is adapted to combinations of a neutral character, such as alterative syrups or liquid mixtures. It should be borne in mind that acids decompose it, and an excess of alkaline or metallic salts will also cause a precipitation in fluids containing it. It may be prescribed in combination with alkaline salts, as for instance the iodide of potassium, without material precipitation, especially if syrup or glycerin be employed as a vehicle. In fact, the method just named will even ensure a reasonable stability if it is desired to incorporate mercuric salts, as the chloride or iodide; in this case glycerin appears to be the most suitable diluent.

Powdered Extracts. See note 159.

139. Quebracho Bark, Aspidosperma Quebracho-blanco, Schlecht. This drug stimulates the respiratory muscles and facilitates oxygenation of the blood. It is thus specially indicated in the treatment of emphysema, capillary bronchitis, certain stages of pneumonia, asthma, etc. Descriptive literature mailed on request.

140. Quinine Elixir. (Elixir Liquorice Aromatic.) *Contains no quinine.* The happy combination of a superior extract of glycyrrhiza with the choicest aromatics has rendered this elixir very useful as a pleasant vehicle for administering quinine. It was, indeed, so frequently called *Quinine Elixir*, and ordered under that name, that, although a misnomer, the appellation has been retained as a synonym for Elixir Liquorice Aromatic.

141. Quinine and Urea Muriate, Hypodermatic Tablets. Each contains an amount of Quinine equivalent to one-half grain of the sulphate. These tablets are readily soluble in water and eminently adapted for hypodermatic medication.

142. Rennin. It was formerly believed that the property of curdling milk was an attribute of pepsin, but this opinion is no longer tenable since it has been proven that casein is curdled by *Rennin*, a ferment distinct from, but associated with, pepsin in the gastric fluid. We take pleasure in placing at the disposal of the medical profession a superior soluble Rennin in pulverulent form—one grain is capable of curdling 2 pints of milk, and it will be found a valuable agent for the preparation of junket, or Curds and Whey, for dietetic purposes. We also call attention to our convenient Rennin Tablet Triturates, 1 gr., in bottles of 100, 500 and 1000. See pages 144 and 179.

143. Reagent Case, Physicians' Pocket. Leather. Containing, in addition to our urinary test tablets (see note 174), a book of instructions for the use of Dr. Oliver's bedside tests, and the following apparatus: (1) two test tubes, one of which is graduated; (2) a grad-

uated minim pipette; (3) set of six specific gravity beads, corresponding to specific gravities respectively of 1.005, 1.010, 1.015, 1.020, 1.025 and 1.030. For price see page 144.

144. Rhubarb, Aromatic, Fluid. This fluid is just three times as strong as the official aromatic tincture of rhubarb, U. S. P. 1890, which it otherwise resembles in every particular. It is employed to prepare extemporaneously the Aromatic Syrup of Rhubarb, and for this purpose is preferable to the official tincture, as it does not introduce into the syrup so large a proportion of alcohol.

145. Rhubarb Comp., Extract, Ph. G. We have discontinued the manufacture of solid extract Rhubarb Compound, and offer instead a powdered extract made in strict accordance with the formula of the German Pharmacopœia.

146. Rhubarb Fingers. As ordinarily prepared, Rhubarb root in cubes or fingers is very inconvenient and wasteful. By a special, improved process, we now press the root into pieces of a uniform size, convenient for carrying in the vest-pocket. Put up in boxes of ninety pieces, weighing about one pound. For price see page 144.

147. *Rhus aromatica*, Ait. Dr. McClanahan says of this remedy that it is useful in diseases of the genito-urinary organs, viz., hematuria, enuresis in both old and young, and in uterine hemorrhage; also locally in leucorrhœa. He has been very successful with it in atonic diarrhœa, dysentery, and in summer complaints of children. Literature mailed on request.

148. Saccharin Triturates, 25 and 65 milligrammes and $\frac{1}{2}$ gr. each, with Sodium bicarbonate, q.s. The sweetening power of Saccharin is about 300 times that of sugar; on this basis one of the largest of these tablets, containing 1 grain of this substance, may be used as the equivalent of about 5 drachms of sugar. Physicians will not only appreciate their convenient form, but will recognize the value of these triturates in cases of diabetes and glycosuria, in which the use of ordinary sugar is contra-indicated. See list of Tablet Triturates, page 179.

148a. Salol Compound and Salol and Santal Compound, Soluble Elastic Capsules of. The presence of pepsin in these formulæ is now rendered practically harmless to the gelatin envelope by first incorporating the pepsin in a tablet, coated so as to be invulnerable to the oily contents of the capsule, though promptly soluble in gastric fluid. The capsule is made large enough to allow free movement of the tablet, in order to avoid prolonged contact of the two at any one point. The salol, being dissolved in the oils, is ready for immediate absorption when it reaches the stomach of the patient.

149. Saline and Chalybeate Tonic Pills (Flint). In the *New York Medical Journal*, May 18, 1889, Prof. Austin Flint, M.D., speaks very highly of this formula as a tonic in Bright's disease, and also in simple anemia, stating that he has given it in nearly every case in private practice in which a chalybeate tonic was indicated, for some time past, and in only one case out of thirty-five did it fail to cause marked improvement. He also states that in five cases of Bright's disease, of which he has notes, this formula was the only medicinal remedy employed, and in every instance it seemed to exert an influence on the quantity of albumin in the urine. In the great majority of the cases of anemia, etc., in which iron was strongly indicated, the tonic seemed to act much more promptly and favorably than the chalybeates usually employed. In a certain number of cases in which patients stated that "they could not take iron in any form," the tonic produced no unpleasant effects. We furnish the same formula in chocolate-coated tablets (see page 237).

149a. Saline Solution (Concentrated), Sterilized. By diluting one bottle of this Solution with sterilized (boiled) distilled or tap water, to one liter, a solution of the following composition is obtained: Calcium chloride, 0.25 Gm.; Potassium chloride, 0.1 Gm.; Sodium chloride, 9.0 Gm.; Water.

Intravenous injections of saline fluid have been found of great value in a large number of serious conditions, extending all the way from lack of blood due to hemorrhage, to various infectious diseases, particularly septicemia. In many instances these injections have seemed to wash the blood of impurities. They are also very valuable in cases of shock and of uremic or diabetic coma. The formula we have adopted was suggested by Dr. F. S. Locke, of the Physiological Department in Harvard Medical School, and Dr. Hobart A. Hare, Professor of Therapeutics in Jefferson Medical College.

The solution should be warmed to a temperature of about 100° F. The dose ranges from $\frac{1}{2}$ to 1 liter, and the frequency of the injections varies according to the exigencies of the case.

For price see page 144. Reprints upon the subject of Intravenous Injections of Saline Solutions, mailed upon application.

150. Santal Oil. Realizing that much of the Oil of Santal in the market was adulterated, for several years we obtained our supplies direct from East India, thus precluding the possibility of sophistication in the hands of traders.

In order to remove all uncertainty concerning the purity of the oil incorporated in our capsules and other pharmaceuticals, we are now, and have been for some time past, importing the *Sandalwood*, which we distill in our Detroit laboratory, thus securing a superior quality of Santal Oil, concerning the purity of which there can be no question whatever.

We market Santal Oil in capsules and in globules, the latter a recent addition to our list. See pages 119, 123, 124, and 135.

151. Sarsaparilla, Para, Fluid Extract. This valuable species of Sarsaparilla is comparatively unknown in the American markets, the supplies being carried through the usual channels of trade from Brazil to Europe. We always keep on hand a large supply of the drug, which is undoubtedly genuine and in prime condition.

152. Sarsaparilla Comp. Fluid Extract, and Fluid Extract Sarsaparilla Comp. for Syrup. It will be observed that the official formulae for Syrup Sarsaparilla Comp. and Fluid Extract Sarsaparilla Comp. differ materially. With this difference in view, we list a Fluid Extract Sarsaparilla Comp. corresponding to the U. S. P. preparation, and a Fluid Sarsaparilla Comp. four times stronger than Syrup Sarsaparilla Comp., U. S. P. 1890. Patrons requiring the latter preparation are requested to specify "Compound for Syrup," otherwise the regular official fluid extract, which is not suitable for preparing the syrup, will be supplied.

153. Saw Palmetto, *Serenoa serrulata*, Benth. & Hook. Prepared from the fresh berries. Sedative, nutritive and diuretic. Used in the treatment of phthisis and other pulmonary and bronchial affections, as well as diseases requiring nutritive remedies. More recently attention has been called to its special vitalizing action upon the mammæ, ovaries, prostate, testes, etc. Literature mailed on request.

154. Saw Palmetto Compound, Fluid. A combination of restoratives, stomachics and aromatics suitable for general and special debilities. Is calculated to restore appetite, regulate function, and stimulate glandular secretion and growth. Is especially available in cases of digestive and sexual debility due to the lack of assimilation or to imperfect function and development.

154a. Saw Palmetto and Santal Compound, Elixir. A combination, in agreeable form, of fresh Saw Palmetto berries, Cornsilk, and Sandalwood. As a sedative and tonic to the genito-urinary system in cases of urethral, prostatic or vesical irritability or malnutrition, it would be difficult to hit upon a formula for general use more promising than this elixir. Each ingredient has a distinct action within the pelvic area, and reinforces rather than repeats the action of its associated ingredients. For price see page 108. Literature on application.

155. Semple Atomizing Inhaler. This is unquestionably the most perfect device ever presented for the application of medi-

cated vapor to the respiratory tract. It combines simplicity of construction, durability, and a fineness of spray unapproached by any atomizing inhaler hitherto introduced. It provides a constant supply of vapor in a reservoir, and secures more effectually than any other the topical effects of medicated vapor on the whole respiratory tract. For formulæ and prices of *Inhalants*, see page 127. For price of *Inhaler*, see page 144.

Literature furnished on application.

156. Senna Pods. Said to be more active than fluid extract of the leaves, and to have less tendency to gripe.

157. Serum Syringes. These are larger than the ordinary hypodermatic syringe. They have, in addition to the needles for injecting, a blunt filling needle by means of which the antitoxin in bulbs or bottles can be more easily drawn into the syringe.

No. 1: Capacity about 6 Cc., or 90 minims. Has three ordinary needles (fine) and one filling needle.

No. 2: Capacity about 10 Cc., or 150 minims. Has two ordinary needles (fine) and one filling needle.

These serum syringes are the instruments heretofore listed as Nuclein Syringe and Antitoxin Syringe. They are supplied in celluloid-lined leather cases. For prices see page 144.

Sierra Salvia. See note 123.

158. Solidago Virgaurea, Lin. (*Virga latifolia*). This has been recently very successfully used in Europe as a diuretic. Its most beneficial effect in ascites arising from cirrhosis of the liver recommends it to the attention of physicians. Diuresis has been obtained from its use in cases of heart disease when other diuretics had failed.

159. Solid Extracts and Powdered Extracts, Assayed. As commonly prepared, solid and powdered extracts partake of the variability in strength which is characteristic of crude drugs. It is plain that this disadvantage is beyond correction through choice of material or care in manufacture, both of which features are chief points in all our manipulations. We have been obliged, therefore, to resort to other means to obviate this defect, and, have, in consequence, adopted a system of assay by which extracts of determinable strength are accurately adjusted to a definite standard, thus presenting a product as uniform in potency as the active principle to which its effect is due. See also note 135.

160. Solutions of Gold and Iodine. Unless these solutions are prepared from strictly pure ingredients they are worse than useless for the treatment of pulmonary consumption. The Gold and Iodine solutions issued from our laboratory are manufactured under the supervision of Dr. J. E. Clark, Professor of Chemistry at the Detroit College of Medicine, who made the solutions employed in the first instance by Drs. Shurly and Gibbs. The Gold solution contains in each 10 minims 1-15 grain of Gold and Sodium chloride. The Iodine solution contains in each 10 minims 1-12 grain of free Iodine. For prices see pages 136 and 137. Literature furnished on application.

161. Squill Compound, Fluid Extract. This fluid extract contains Squill and Senega in equal proportions, and serves for the extemporaneous preparation of Compound Syrup of Squill, U. S. P.

162. Strophanthus. Our preparations are made from the grayish-green seed obtained from the plant that was originally described by Prof. Oliver as *Strophanthus Kombe* and is the *S. hispida* of the U. S. P.

We prepare tablet triturates of Strophanthus, representing 1 minim, 2 minims and 5 minims of the tincture, respectively, and a tablet triturate of Digitalis (3 minims) and Strophanthus (2 minims); also diurnules and diurnal tablet triturates. Send for literature.

163. Stylosanthes elatior, Swz. (Pencil Flower, After-birth Weed). A drug of reputed value as a uterine sedative, allaying the irritability of the uterus in gestation and imparting tone to its fibre against the parturient act. Descriptive literature mailed on request.

164. Sulphur Torches.—Each torch contains one pound of Sulphur. The value of sulphur fumigations in contagious diseases is too well understood by the medical profession to require much comment.

However, it is not easy to ignite pure brimstone or to maintain its combustion. These Sulphur torches are easily ignited and will continue to burn until consumed. They are specially adapted for the disinfection of rooms in which there have been cases of scarlet fever,

diphtheria, etc., etc. Blankets, bedding, etc., should be so spread out as to be thoroughly exposed during the fumigation. Close all openings to the room, place the required number of torches (still in their containers) in a group in a large pan, supported on bricks in such a way that there shall be no danger of fire; light them, and immediately leave the room, allowing it to remain closed for twelve hours or more. For price see page 144.

165. Suprarenal Glands, Saccharated. Dr. George Oliver recently read an important contribution to the literature of the therapeutic employment of this gland, before the Pharmacological Section of the British Medical Association. In a marked case of Addison's disease the nausea and muscular debility were greatly diminished, the improvement persisting as long as the drug was administered, and when the treatment was suspended for a week the patient noticed that the pigmentation of the skin—one of the symptoms—became more pronounced. Further, the remedy was found of use in certain conditions marked by loss of vaso-motor tone. In cases of simple anæmia, improvement was noticed during the treatment, and there is some hope that it may prove a useful auxiliary in the treatment of the graver forms of anæmia. In cases marked by the cyclic appearance of albumin, the latter disappeared and the general health improved. In two out of three cases of diabetes mellitus the remedy also appeared to have a good effect, the amount of sugar being lessened and the tone of the circulation improved.

As this agent apparently holds out the promise of considerable therapeutic value, we are manufacturing a preparation of the Suprarenal Gland from sheep, for internal administration, and supply it in tablets, in capsules, and in bulk, each tablet or capsule representing about one-twelfth of an entire fresh suprarenal gland of the sheep. For price see page 144.

166. Sweet Balm. We at one time offered, under the name of sweet balm, *Dracocephalum canariense*, L. (*Cedronella triphylla*, *Manch.*), the balm-of-Gilead herb of the gardens. We found that the name "sweet balm" in commerce was generally understood to apply to *Melissa officinalis*, *Lin.*, also known as Lemon Balm, which we now supply when sweet balm is ordered.

Syringes, Serum. See Serum Syringes, note 157.

Tablet Triturate Cases. See pp. 225 and 226.

167. Taka-Diastase is an isolated ferment, in powder form, for the treatment of amylaceous indigestion. It is a diastatic ferment above all comparison with malt extracts and preparations of that class, since under proper conditions it will convert 100 times its weight of starch in ten minutes, while the best malt extract will not convert more

than one-twentieth of that amount. Moreover, Taka-Diastase is absolutely permanent, free from sugar, convenient to dispense, and comparatively economical. For price see page 145.

In compliance with the recommendation of a number of physicians we have added to our list **Liquid Taka-Diastase**, which contains in each fluidrachm $2\frac{1}{2}$ grains of the active ferment. Dose, one to two teaspoonfuls during or immediately after each meal. Put up in 8-oz. bottles; for price see page 145.

Literature upon Taka-Diastase mailed upon request.

168. Thymus Glands, P. D. & Co. The very successful treatment of exophthalmic goitre by thymus feeding at the hands of Drs. Owen, Edes, Cunningham, Mikulicz, Maude, and others, has prompted us to place this product upon the market. It is prepared with the utmost care from the thymus glands of sheep. Literature sent on request.

169. Thyroids, P. D. & Co. Two grains of this powder are equivalent to five grains of fresh glands from *sheep*. We claim the following points of superiority in our Thyroid preparation:

1. It is permanent.

2. It represents *no* extract, but all the constituents of the gland.

3. It is of agreeable odor and taste, is non-poisonous and free from ptomaines.

4. It is of *uniform* strength—with an *unvarying normal proportion of iodine*—hence of uniform activity.

Dose, 2 to 6 grains three times a day, to be cautiously increased at the discretion of the physician. In occasional instances double or treble this amount may be necessary.

Thyroids, P. D. & Co., are also marketed in tablets and capsules, each tablet or capsule being equivalent to five grains of the *fresh glands*.

For price see page 145. Literature furnished upon application.

170. Tonga, Rhabdophora vitiensis, Schott, and Premna taitensis, Schauer. This preparation was placed on the market as a remedy in neuralgia, on the recommendation of Drs. Ringer and Murrell, of London, who have made very thorough experiments to determine its therapeutic value. Their high claims for it have been abundantly corroborated by other physicians. Literature mailed upon application.

171. Trifolium Compound, Syrup. Superior in efficacy to the combination of alteratives known as Bamboo-brier Root Compound, Alternative Compound, etc. Experience with the latter combination led to the belief that the formula could be greatly improved, and after much clinical experience Syrup Trifolium Compound was devised; its value has now been thoroughly established by physicians. Prescribed in all forms of secondary syphilis, its restorative action in nearly every case is prompt and decisive. Each fluidounce contains the active constituents of Red Clover blossoms, 32 grs.; Lappa, 16 grs.; Berberis aquifolium, 16 grs.; Xanthoxylum, 4 grs.; Stillingia, 16 grs.; Phytolacca root, 16 grs.; Cascara anarga, 16 grs.; Potassium iodide, 8 grs. Dose, two teaspoonfuls (8 Cc.) three times a day, which may be gradually increased to a tablespoonful if desired. For price see page 144. Literature sent on request.

171a. Trifolium Compound (Alternative). Compressed Tablets No. 48 were added to our list merely to meet an established demand, and we have never regarded them as a desirable substitute for our Syrup Trifolium Compound.

The attention of physicians is respectfully directed to the fact that Trifolium Compound Tablets contain no Berberis aquifolium, cascara anarga or potassium iodide, all of which are present in our Syrup Trifolium Compound.

In view of these omissions, and for many other good reasons, these tablets should not be prescribed in place of our Syrup, the value of which has been thoroughly proven.

172. Triticum. Liquor Tritici. A concentrated liquid extract of *Agropyrum repens (Lin.) Beauv.* This is intended to meet the demand for a preparation of couch-grass more active than the regular fluid extract. It embodies all the medicinal constituents of this valuable remedy in normal combination and in concentrated form. Because of its demulcent and emollient properties, and its efficiency as a diuretic, Liquor Tritici is peculiarly adapted to the relief of urine-suppression and for the treat-

ment of all inflamed and congested conditions of the kidneys, bladder and other urinary organs. Dose: 1 to 4 fluidrachms (4 to 15 Cc.) at intervals of one to four hours: in suppression of urine, the intervals between doses should be diminished. For price see page 137.

173. Tuberculin (concentrated, for veterinary use). The only reliable agent for detecting incipient tuberculosis in animals. Diagnosis based upon this test, but without any corroborating evidence whatever, has been in numerous instances confirmed by post-mortem examination.

One vial contains sufficient Tuberculin for four injections. See p. 145.

NOTE.—We can also supply diluted Tuberculin if desired. Bulk orders promptly filled.

Literature furnished on application

174. Urinary Test Tablets. These tablets, covering the tests included in our former list of urinary test papers, may be employed in lieu of the latter, the same instructions being observed. The circumstance should be noted, however, that indigo and sodium carbonate, which were supplied separately in the form of the test papers, are furnished combined in the indigo and sodium-carbonate tablet, which simplifies the use of these tests. The test papers have been removed from our price list as affording less satisfaction than the tablets. Literature furnished on application. For price see page 145. See also note on Reagent Case, No. 143.

175. Ustilago Maydis (Corn Ergot). First introduced by us. A substitute for ergot of rye. It has been pronounced superior to ergot in passive hemorrhages, and as a parturifacient it has the advantage over that agent of inducing intermittent instead of continuous contraction of the uterus. Literature mailed upon application.

175a. Vaginal Suppositories. No. 1 contains 5 grains of iodoform; No. 2, 5 grains of boric acid and 3 grains of aristol. For post-partum insertion, to check microbic development and promote the healing of excoriated or lacerated mucous surfaces. Dr. W. P. Manton, of Detroit, after an experience of six or eight years with this form of puerperal antisepsis, recommends it as being both convenient and serviceable. It is highly important that post-partum medication applied to the parturient tract should be entirely free from germs of any kind; and this desideratum is supplied in our Vaginal Suppositories (made according to Dr. Manton's formulæ) by the sterilizing processes employed in their manufacture and the care exercised in preparing them for the market. For prices see page 145. Send for Leaflet No. 2.

176. Veterinary Hypodermatic Case. We have pleasure in directing the attention of veterinary surgeons to our silk-lined morocco-covered Veterinary Hypodermatic Case, which measures 7½ inches long, 4½ inches wide and 1¾ inches deep, and contains, when complete: A graduated veterinary hypodermatic syringe of improved construction; a hypodermatic needle; a hypodermatic trocar needle; a hypodermatic trocar; and a full line of our veterinary hypodermatic tablets. For price see page 145. Send for illustrated descriptive circular.

For list of Veterinary Hypodermatic Tablets, see page 101.

177. Warburg Tincture, Powdered Extracts, Pills, etc. For convenience of the druggist, and because objection is often raised to the bitter taste of the tincture, we have added to our list two powdered extracts which represent the medicinal value of the original preparation—one with aloes and the other without.

We also supply pills, soluble elastic capsules, and compressed tablets, representing respectively ½ and 1 fluidrachm, 2 fluidrachms, and 1 fluidrachm, of Warburg Tincture, with or without aloes.

Literature on Warburg Tincture furnished on application.

178. Warburg Tincture, Special. This tincture is modified by the substitution of the cheaper cinchona alkaloids for quinine, following in all other respects the directions given in the National Formulary. Each fluidounce contains: Cinchonidine sulphate, 3 1-3 grains; Cinchonine sulphate, 3 1-3 grains; Chinoidin, pure, 3 1-3 grains.

For price of Warburg Tincture see page 146.

178a. White Zapote, *Casimiroa edulis*, *La Llave et Lex.* Favorable reports on the action of this drug in insomnia have been made by medical officers of the hospital service in the City of Mexico. We list it as a fluid extract. Literature furnished on application.

179. Wild Cherry, Fluid Extracts. We manufacture four fluid extracts of this drug (*Prunus serotina*, Ehrh.). The alcoholic extract differs from the fluid extract of the U. S. P., chiefly in that a different menstruum is employed; the Fluid Cherry for syrup is four times stronger than syrup wild cherry, U. S. P. 1890; the detannated fluid extract is intended for admixture with preparations containing iron. In absence of specification to the contrary, we supply Fluid Extract Wild Cherry, which corresponds to the U. S. P. preparation.

180. Witch Hazel, Concentrated Distilled Extract (*Hamamelis*). Our distilled extract of Witch Hazel is a superior preparation, very rich in the peculiar volatile principles in which the medicinal virtues of the plant chiefly reside. This article should be carefully preserved in glass, securely corked. It is liable to freeze during transit in very cold weather. For price see page 146.

181. Woodbridge Treatment of Typhoid Fever. This method requires the employment of No. 1, No. 2 and No. 3 of the following formulæ, according to directions, which are furnished with each package and upon request by mail.

No. 4 and No. 5 are especially designed for the treatment of children, and are not supplied with the regular case.

R No. 1 (Tablets): Podophyllum resin, 1-960 gr.; Mercurous chloride, mild, 1-16 gr.; Guaiacol carbonate, 1-16 gr.; Menthol, 1-16 gr.; Eucalyptol, q. s.

R No. 2 (Tablets): Podophyllum resin, 1-960 gr.; Mercurous chloride, mild, 1-16 gr.; Guaiacol carbonate, 1-4 gr.; Menthol, 1-16 gr.; Thymol, 1-16 gr.; Eucalyptol, q. s.

R No. 3 (Capsules): Guaiacol carbonate, 3 grs.; Thymol, 1 gr.; Menthol, 1-2 gr.; Eucalyptol, 5 ℥.

R No. 4 (Tablets)—for children: Podophyllum resin, 1-960 gr.; Mercurous chloride, mild, 1-16 gr.; Guaiacol carbonate, 1-8 gr.; Menthol, 1-96 gr.; Eucalyptol, q. s.

R No. 5 (Capsules)—for children: Guaiacol carbonate, 1-2 gr.; Thymol, 1-8 gr.; Menthol, 1-16 gr.; Eucalyptol, 1 ℥; Olive oil, sufficient.

The above described tablets and capsules are manufactured in our laboratory, under the supervision of Dr. John Eliot Woodbridge. For price see page 146. Literature furnished on application.

182. Yerba Santa (*Eriodictyon*, U. S. P.), *Eriodictyon glutinosum*, *Benth.* From Northern California. This drug was first introduced to the notice of the medical profession by us, and its important properties have been so generally recognized that the U. S. P. committee incorporated it in the 1890 edition. It is now a standard remedy in bronchial and laryngeal disorders. Combined with *Grindelia robusta* in form of syrup, it is very efficient in coughs. One of its most remarkable properties is its power of completely disguising the bitter taste of quinine. We prepare a special Aromatic Syrup of Yerba Santa as a vehicle for the administration of quinine. One fluidounce of this syrup represents 60 grains *Eriodictyon* with aromatics, and completely masks the bitterness of 8 grains of quinine sulphate. We also prepare a Glycerole Yerbine Compound, the formula of which appears on page 126. Write for descriptive literature.

183. Yerba Santa Aromatic, Fluid. The strength of this preparation is just four times that of the syrup of yerba santa aromatic; it is specially adapted for the extemporaneous preparation of the latter, according to instructions given on the label. Sixteen fluidounces represents 8 ozs. 340 grains av. *Eriodictyon*, combined with aromatics.

SYNONYMS.

The names given in the right-hand column are those of our price list, by which the various articles will be found quoted under Fluid Extracts, Pressed Herbs, etc. In order, therefore, to condense this list of synonyms as much as possible, these names are not duplicated or cross-entered in the alphabetic column. The botanical synonyms following in parentheses the botanical name in first column, are those which have been most generally adopted. See also note on *Synonyms*, page 276.

<i>Abies balsamea</i>	Balsam Fir.
<i>Abies canadensis</i> (<i>Tsuga canadensis</i>).....	Hemlock Spruce.
<i>Abrus precatorius</i>	Jequinty.
<i>Absinthium</i>	Wormwood.
<i>Acacia Catechu</i>	Catechu.
<i>Acer rubrum</i>	Red Maple.
<i>Achillea Millefolium</i>	Yarrow.
<i>Aconitum Napellus</i>	Aconite.
<i>Acorus Calamus</i>	Calamus, Sweet Flag.
<i>Actæa alba</i>	White Cohosh.
<i>Actæa racemosa</i> (<i>Cimicifuga racemosa</i>), <i>Cimicifuga</i> , Black Cohosh.	
<i>Adiantum pedatum</i>	Maiden-hair.
<i>Ægle Marmelos</i>	Bael fruit.
<i>Æsculus glabra</i>	Buckeye.
<i>Æsculus Hippocastanum</i>	Horse-chestnut.
<i>Agave planifolia</i>	Guaco root.
<i>Agrimonia Eupatoria</i>	Agrimony herb.
<i>Agropyrum repens</i>	Triticum, Couch Grass.
<i>Aletris farinosa</i>	Star-grass (Unicorn-root).
<i>Alkanna tinctoria</i>	Alkanet root.
<i>Allium sativum</i>	Garlic.
<i>Allspice</i>	Pimenta.
<i>Alnus serrulata</i>	Tag Alder.
<i>Alpinia officinarum</i>	Galangal.
<i>Althæa officinalis</i>	Marshmallow.
<i>Althæa rosea</i>	Hollyhock.
<i>Ambrosia artemisiæfolia</i>	Rag-weed.
<i>American Saffron</i>	Safflower.
<i>Ampelopsis quinquefolia</i> (<i>Vitis quinquefolia</i>).....	American Ivy.
<i>Anacyclus Pyrethrum</i>	Pellitory.
<i>Anagallis arvensis</i>	Scarlet Pimpernel.
<i>Anamirta Cocculus</i>	Cocculus (Fish-berries).
<i>Anemone Hepatica</i>	Liverwort.
<i>Anemone Pulsatilla</i>	Pulsatilla.
<i>Angelica Archangelica</i>	Angelica root.
<i>Angelica atropurpurea</i>	Angelica seed.
<i>Anhalonium Lewinii</i>	Anhalonium.
<i>Anthemis Cotula</i>	Mayweed.
<i>Anthemis nobilis</i>	Chamomile, Roman.
<i>Apium graveolens</i>	Celery seed.
<i>Aplopappus Baylahuen</i>	Hysserionica.
<i>Apocynum androsaemifolium</i>	Bitter-root.
<i>Apocynum cannabinum</i>	Apocynum, Canadian Hemp.
<i>Aralia hispida</i>	Dwarf Elder.
<i>Aralia nudicaulis</i>	American Sarsaparilla.

SYNONYMS—CONTINUED.

<i>Aralia racemosa</i>	Spikenard.
<i>Archangelica officinalis</i> (<i>Angelica</i> <i>Archangelica</i>).....	<i>Angelica</i> root, German.
<i>Arctium Lappa</i>	<i>Lappa</i> , Burdock.
<i>Arctostaphylos glauca</i>	Manzanita leaves.
<i>Arctostaphylos Uva-ursi</i>	<i>Uva Ursi</i> .
<i>Areca Catechu</i>	<i>Areca</i> nut.
<i>Arisæma triphyllum</i>	Indian Turnip.
<i>Aristolochia Serpentaria</i>	<i>Serpentaria</i> .
<i>Arnica montana</i>	<i>Arnica</i> .
<i>Artanthe elongata</i> (<i>Piper angustifolium</i>)..	<i>Matico</i> .
<i>Artemisia Abrotanum</i>	Southernwood.
<i>Artemisia Absinthium</i>	Wormwood.
<i>Artemisia frigida</i>	Mountain Sage.
<i>Artemisia vulgaris</i>	Mugwort.
<i>Arum triphyllum</i> (<i>Arisæma triphyllum</i>)..	Indian Turnip.
<i>Asagræa officinalis</i>	<i>Cevadilla</i> .
<i>Asarum canadense</i>	Canada Snake-root.
<i>Asclepias curassavica</i>	Blood-flower.
<i>Asclepias incarnata</i>	White Indian Hemp.
<i>Asclepias syriaca</i>	Silkweed.
<i>Asclepias tuberosa</i>	<i>Asclepias</i> , <i>Pleurisy</i> root.
Ash bark.....	Black Ash, White Ash.
<i>Asimina triloba</i>	Papaw seed.
<i>Asparagus officinale</i>	<i>Asparagus</i> .
<i>Aspidium Filix-mas</i>	Male-fern.
<i>Aspidosperma Quebracho-blanco</i> ...	<i>Aspidosperma</i> .
<i>Atropa Belladonna</i>	<i>Belladonna</i> .
Australian Fever-bark.....	<i>Alstonia constricta</i> .
<i>Avens</i>	Water <i>Avens</i> .
Balm.....	Lemon Balm.
Balm-of-Gilead buds.....	Balsam Poplar buds.
Balsam Spruce.....	Balsam Fir.
Bamboo-brier Comp.....	Alternative Compound.
<i>Baptisia tinctoria</i>	Wild Indigo.
<i>Barosma betulina</i> , and <i>B. crenulata</i> ..	<i>Buchu</i> .
<i>Berberis vulgaris</i>	Barberry bark.
<i>Betonica officinalis</i> (<i>Stachys Betonica</i>)..	Wood Betony.
<i>Betula lenta</i>	Black Birch bark.
<i>Bidens bipinnata</i>	Spanish Needles.
Black Indian Hemp.....	<i>Apocynum</i> , Canadian Hemp.
Black Sampson.....	<i>Echinacea</i> .
Black Snake-root.....	<i>Cimicifuga</i> , Black Cohosh.
<i>Boletus laricis</i> (<i>Polyporus officinalis</i>)..	Agaric (White Agaric).
<i>Borago officinalis</i>	Borage.
Bou-Nefa.....	<i>Thapsia</i> .
Boxwood.....	Dogwood.
<i>Brunfelsia Hopeana</i>	Manacá.
<i>Bryonia alba</i>	<i>Bryonia</i> , White Bryony.
<i>Cactus grandiflorus</i>	<i>Cereus grandiflorus</i> .
Calamus.....	Sweet Flag.
<i>Calendula officinalis</i>	<i>Calendula</i> , Marigold flowers.
Cancer-root.....	Beech-drop.
<i>Canella alba</i>	<i>Canella</i> .
<i>Cannabis indica</i> or <i>C. sativa</i>	Indian Cannabis.
<i>Cantharis vesicatoria</i>	<i>Cantharides</i> .
<i>Capsella Bursa-pastoris</i>	Shepherd's-purse.
<i>Capsicum fastigiatum</i>	<i>Capsicum</i> .
<i>Carbenia benedicta</i>	Blessed Thistle.

SYNONYMS—CONTINUED.

Carrion-flower.....	Jacob's-ladder.
Carthamus tinctorius.....	Safflower.
Carum Carvi.....	Caraway.
Carum copticum.....	Ajowan seed.
Carum Petroselinum.....	Parsley.
Caryophyllus aromaticus (Eugenia caryophyllata).....	Cloves.
Casimiroa edulis.....	White Zapote.
Cassia angustifolia.....	Senna.
Castalia odorata.....	White Pond-lily.
Castanea dentata.....	Castanea, Chestnut.
Castela Nicholsoni.....	Chaparro Amargoso.
Caulophyllum thalictroides.....	Blue Cohosh.
Ceanothus americanus.....	Jersey Tea (New Jersey Tea).
Celandine, Garden.....	Garden Celandine.
Celastrus scandens.....	False Bittersweet.
Centaurea benedicta (Carbenia benedicta) ..	Blessed Thistle.
Centaury, red.....	American Centaury.
Cephaelis Ipecacuanha.....	Ipecac.
Cercis canadensis.....	Judas-tree.
Chamælorium luteum.....	Helonias.
Chelidonium majus.....	Garden Celandine.
Chelone glabra.....	Balmoney.
Chenopodium anthelminticum.....	American Wormseed.
Chenopodium Botrys.....	Jerusalem Oak.
Cherry.....	Wild Cherry.
Chimaphila umbellata.....	Chimaphila, Pipsissewa.
Chionanthus virginica.....	Fringe-tree.
Chondodendron tomentosum.....	Pareira, Pareira Brava.
Chrysanthemum Leucanthemum.....	Ox-eye Daisy root.
Chrysanthemum Parthenium.....	Feverfew.
Cicuta maculata.....	Water Hemlock.
Cimicifuga racemosa.....	Cimicifuga, Black Cohosh.
Cinchona Calisaya.....	Cinchona.
Cinchona officinalis.....	Cinchona, pale.
Cinchona succirubra.....	Cinchona, red.
Cinnamomum Cassia.....	Cassia Cinnamon.
Cinnamomum Zeylanicum.....	Ceylon Cinnamon.
Cirsium arvense (Cnicus arvensis) ..	Canada Thistle.
Citrullus Colocynthis.....	Colocynth.
Citrullus vulgaris.....	Watermelon.
Citrus Aurantium.....	Orange peel, sweet.
Citrus Limonum.....	Lemon peel.
Citrus vulgaris.....	Bitter Orange peel.
Claviceps purpurea.....	Ergot.
Cnicus arvensis.....	Canada Thistle root.
Cnicus benedictus (Carbenia benedicta) ..	Blessed Thistle.
Cocculus indicus.....	Cocculus (Fish-berries).
Cocculus palmatus (Jateorhiza palmata) ..	Calumba.
Cochitzapotl.....	White Zapote.
Cochlearia Armoracia (Nasturtium Armoracia).....	Horse-radish.
Cocklebur.....	Clotbur.
Coffea arabica.....	Coffee.
Cola acuminata.....	Kola nut.
Colchicum autumnale.....	Colchicum.
Collinsonia canadensis.....	Stone-root.
Commiphora Myrrha.....	Myrrh.

SYNONYMS—CONTINUED.

<i>Comptonia asplenifolia</i> (<i>Myrica asplenifolia</i>).....	Sweet Fern.
<i>Conium maculatum</i>	Conium.
<i>Convallaria majalis</i>	Lily-of-the-valley, <i>Convallaria</i>
<i>Convolvulus panduratus</i> (<i>Ipomœa pandurata</i>).....	Man-root.
<i>Coptis trifolia</i>	Gold-thread.
<i>Corallorhiza odontorhiza</i>	Crawley-root.
<i>Coriandrum sativum</i>	Coriander.
Corn Ergot (corn smut).....	<i>Ustilago Maydis</i> .
<i>Cornus circinata</i>	Green Osier bark.
<i>Cornus florida</i>	Dogwood.
<i>Cornus sericea</i>	Red Osier bark.
<i>Cratægus Oxyacantha</i>	Hawthorn.
<i>Croton Eluteria</i>	Cascarilla.
<i>Cucumis Colocynthis</i> (<i>Citrullus Colocynthis</i>)..	Colocynth.
<i>Cucurbita Citrullus</i> (<i>Citrullus vulgaris</i>)..	Watermelon seed.
<i>Cucurbita Pepo</i>	Pumpkin seed.
<i>Cunila mariana</i>	Dittany.
<i>Curcuma longa</i>	Turmeric.
<i>Cusparia trifoliata</i> (<i>Galipea Cusparia</i>)..	Angustura.
<i>Cynoglossum officinale</i>	Hound's-tongue leaves.
<i>Cyperus articulatus</i>	Adrie.
<i>Cypripedium pubescens</i>	Cypripedium, Ladies'-slipper.
<i>Cytisus Scoparius</i>	Scoparius, Broom tops.
<i>Daphne Mezereum</i>	Mezereum.
<i>Datura Stramonium</i>	Stramonium.
<i>Daucus Carota</i>	Wild Carrot leaves.
<i>Delphinium Consolida</i>	Larkspur seed.
<i>Delphinium Staphisagria</i>	Stavesacre seed.
<i>Dicentra canadensis</i>	Turkey-corn.
<i>Digitalis purpurea</i>	Digitalis, Foxglove.
<i>Dioscorea villosa</i>	Wild Yam.
<i>Diospyros virginiana</i>	Persimmon bark.
<i>Dipteryx odorata</i>	Tonka Bean.
<i>Dog-grass</i>	Couch-grass.
<i>Drosera rotundifolia</i>	Sundew.
<i>Dryopteris Filix-mas</i> and <i>D. marginalis</i> ..	Male-fern (<i>Aspidium</i>).
<i>Duboisia myoporoides</i>	Duboisia leaves.
<i>Dulcamara</i>	Dulcamara, Bittersweet.
<i>Echinacea angustifolia</i>	Echinacea.
<i>Elephantopus tomentosus</i>	Elephant's-foot.
<i>Elettaria repens</i>	Cardamom.
<i>Embelia Ribes</i>	Embelia.
English Walnut.....	Black Walnut.
<i>Epigæa repens</i>	Gravel-plant.
<i>Epilobium angustifolium</i> (<i>E. spicatum</i>)..	Willow-herb.
<i>Epiphegus virginiana</i>	Beech-drop.
<i>Equisetum hyemale</i>	Scouring Rush.
<i>Erechthites hieracifolia</i>	Fireweed.
<i>Erigeron canadense</i>	Fleabane.
<i>Eriodictyon glutinosum</i>	Eriodictyon (<i>Verba Santa</i>).
<i>Eryngium yuccæfolium</i> (<i>E. aquaticum</i>)..	Water Eryngo.
<i>Erythraea Centaurium</i>	European Centaury.
<i>Erythronium Americanum</i>	Adder's-tongue leaves.
<i>Erythroxylon Coca</i>	Coca.
<i>Eschscholtzia Californica</i>	Eschscholtzia.
<i>Eucalyptus globulus</i>	Eucalyptus.
<i>Eucalyptus rostrata</i>	Red Gum.

SYNONYMS--CONTINUED.

<i>Eugenia aromatica</i>	Cloves.
<i>Eugenia Chequen</i>	Chekan.
<i>Eugenia Jambolana</i>	Jambul seed.
<i>Eugenia Pimenta</i>	Pimenta (Allspice).
<i>Euonymus atropurpureus</i>	Wahoo.
<i>Eupatorium aromaticum</i>	White Snake-root.
<i>Eupatorium perfoliatum</i>	Eupatorium, Boneset.
<i>Eupatorium purpureum</i>	Queen-of-the-meadow.
<i>Euphorbia corollata</i>	Flowering Spurge.
<i>Euphrasia officinalis</i>	Eyebright.
European Walnut.....	Black Walnut.
<i>Fabiana imbricata</i>	Pichi.
<i>Fagus ferruginea</i>	Beech.
<i>Ferula foetida</i>	Asafetida.
<i>Ferula Sumbul</i>	Musk-root, Sumbul.
Fever-bush.....	Spice-bush.
Figwort.....	Figwort, Carpenter's-square.
Fish-berries.....	Cocculus.
Five-finger.....	Cinquefoil.
<i>Foeniculum capillaceum</i>	Fennel.
Foreign Indian Hemp.....	Indian Cannabis.
<i>Fragaria vesca</i>	Strawberry leaves.
<i>Franciscia uniflora</i> (<i>Brunfelsia Hopeana</i>)..	Manacá.
Frangula.....	Frangula, Buckthorn bark.
<i>Frankenia grandifolia</i>	Yerba Reuma.
<i>Frasera carolinensis</i>	American Columbo.
<i>Fraxinus americana</i>	White Ash bark.
<i>Fraxinus sambucifolia</i>	Black Ash bark.
<i>Fucus vesiculosus</i>	Bladder-wrack.
<i>Galipea Cusparia</i>	Angustura.
<i>Galium Aparine</i>	Cleavers.
<i>Galium verum</i>	Ladies'-bedstraw.
<i>Garcinia Mangostana</i>	Mangosteen fruit.
<i>Garrya Fremontii</i>	California Fever-bush.
<i>Gaultheria procumbens</i>	Wintergreen.
<i>Gelsemium sempervirens</i>	Gelsemium.
<i>Gentiana lutea</i>	Gentian.
<i>Gentiana ochroleuca</i>	Sampson Snake-root.
<i>Gentiana puberula</i>	Blue Gentian root.
<i>Gentiana quinqueflora</i> (<i>G. quinquefolia</i>)..	Five-flowered Gentian.
<i>Geranium maculatum</i>	Geranium, Cranesbill.
<i>Geum rivale</i>	Water Avens.
<i>Gillenia trifoliata</i>	Indian Physic.
<i>Glycyrrhiza glabra</i>	Glycyrrhiza, Liquorice.
<i>Gnaphalium polycephalum</i>	Life-everlasting.
<i>Gonolobus Conduango</i>	Conduango.
<i>Gossypium herbaceum</i>	Cotton-root bark.
<i>Gouania domingensis</i>	Chewstick.
<i>Grindelia robusta</i> and <i>G. squarrosa</i> ..	Grindelia.
<i>Guaiacum officinale</i>	Guaiacum wood.
<i>Guarea Rusbyi</i>	Cocillafia.
<i>Gynocardia odorata</i>	source of Chaulmoogra oil.
<i>Hamatoxylon campechianum</i>	Logwood.
<i>Hagenia abyssinica</i>	Kosso (Cusso).
<i>Hamamelis virginiana</i>	Hamamelis, Witch Hazel.
Haw.....	Hawthorn.
<i>Hedeoma pulegioides</i>	Pennyroyal.
<i>Helianthemum canadense</i>	Frostwort.
<i>Helianthus annuus</i>	Sunflower seed.

SYNONYMS—CONTINUED.

Helleborus niger.....	Black Hellebore.
Henbane.....	Hyoscyamus.
Hepatica triloba (Anemone Hepatica)...	Liverwort.
Heracleum lanatum.....	Masterwort.
Honduras Bark.....	Cascara Amarga.
Humulus Lupulus.....	Hops.
Hydrangea arborescens.....	Hydrangea.
Hydrastis canadensis.....	Hydrastis, Golden-seal.
Hyoscyamus niger.....	Henbane, Hyoseyamus.
Hypericum perforatum.....	Johnswort.
Hyssopus officinalis.....	Hyssop.
Ilex paraguayensis.....	Paraguay Tea (Maté).
Ilex verticillata.....	Black Alder.
Impatiens pallida.....	Wild Celandine.
Indian Hemp, <i>see Black and Foreign Indian Hemp.</i>	
Inula Helenium.....	Elecampane.
Ipomoea Jalapa.....	Jalap.
Ipomoea pandurata.....	Man-root.
Iris florentina.....	Orris-root.
Iris versicolor.....	Iris, Blue Flag.
Istactzapotl.....	White Zapote.
Itch-weed.....	American Hellebore.
Jacaranda procera.....	Caroba leaves.
Jamaica-Pimento leaves.....	Pimenta.
Jamestown-weed.....	Stramonium.
Jateorhiza palmata.....	Calumba.
Jeffersonia diphylla.....	Twin-teat.
Jewel weed.....	Wild Celandine.
Juglans cinerea.....	Juglans, Butternut.
Juglans nigra.....	Black Walnut.
Juniperus communis.....	Juniper berries.
Juniperus Sabina.....	Savine.
Kalmia latifolia.....	Mountain Laurel.
Knot-grass.....	Triticum, Couch-grass.
Krameria triandra.....	Krameria, Rhatany.
Lactuca sativa.....	Garden Lettuce.
Lactuca virosa.....	<i>source of</i> Lactucarium.
Lamium album.....	Nettle flowers.
Lappa officinalis (Arctium Lappa)...	Burdock, Lappa.
Larix americana.....	Tamarac bark.
Laurus nobilis.....	Bay Laurel.
Lavandula vera (L. Spica).....	Lavender flowers.
Ledum latifolium.....	Labrador Tea leaves.
Leonurus Cardiaca.....	Motherwort.
Leptandra virginica (Veronica virginica)...	Leptandra, Culver's-root.
Lesser Galangal.....	Galangal.
Levisticum officinale.....	Lovage.
Liatris odoratissima (Trilisa odoratissima)...	Deer-tongue.
Liatris spicata.....	Button Snake-root.
Lichen pulmonarius (Sticta pulmonaria)...	Lungmoss.
Ligusticum Levisticum (Levisticum officinale)...	Lovage.
Ligustrum vulgare.....	Privet leaves.
Lindera Benzoin.....	Spice-bush, Fever-bush.
Liquidambar styraciflua.....	Sweet-gum bark.
Liriodendron tulipifera.....	Tulip-tree bark.
Liriosma ovata.....	Muirapuama.
Lobelia inflata.....	Lobelia.
Lobelia syphilitica.....	Blue Cardinal leaves.
Lycopus europæus.....	Bitter Bugleweed.

SYNONYMS—CONTINUED.

<i>Lycopus virginicus</i>	Bugleweed.
<i>Magnolia glauca</i>	Magnolia bark.
Malabar Nut.....	Adhatoda vasica.
<i>Mallotus philippinensis</i>	Kamala.
<i>Malva parviflora</i>	Low Mallow leaves.
Mango.....	Mangosteen.
Marigold.....	Calendula.
<i>Marrubium vulgare</i>	Horehound.
<i>Matricaria Chamomilla</i>	Chamomile, German.
May.....	Hawthorn.
May-apple.....	Podophyllum, Mandrake.
<i>Melia Azedarach</i>	Pride of China.
<i>Melilotus officinalis</i>	Sweet Clover.
<i>Melissa officinalis</i>	Lemon Balm.
<i>Menispermum canadense</i>	Menispermum, Yellow Parilla.
<i>Mentha piperita</i>	Peppermint.
<i>Mentha viridis</i>	Spearmint.
<i>Menyanthes trifoliata</i>	Buckbean.
<i>Mercurialis annua</i>	Mercury-weed.
Mescale Buttons.....	Anhalonium.
<i>Micromeria Douglasii</i>	Yerba Buena.
Milkweed.....	Silkweed.
<i>Mitchella repens</i>	Squaw-vine.
<i>Mitella nuda</i>	Coolwort.
<i>Monarda fistulosa</i>	Wild Bergamot.
<i>Monarda punctata</i>	Horsenint leaves.
<i>Monotropa uniflora</i>	Fit-root plant.
Mountain Rush.....	Ephedra antisiphilitica.
Mouthroot.....	Gold-thread.
Murillo bark.....	Soap-tree bark.
Muscale Buttons.....	Anhalonium.
<i>Mutisia viciæfolia</i>	Mutisia.
<i>Myrcia acris</i>	Bay Laurel.
<i>Myrica asplenifolia</i>	Sweet Fern.
<i>Myrica cerifera</i>	Bayberry.
<i>Myristica fragrans</i>	Mace, Nutmegs.
<i>Myrtus Chekan</i> (<i>Eugenia Chequen</i>).....	Chekan.
<i>Nasturtium Armoracia</i>	Horse-radish.
<i>Nectandra</i>	Coto bark.
<i>Nepeta Cataria</i>	Catnep.
<i>Nepeta Glechoma</i>	Ground Ivy.
New Jersey Tea.....	Jersey Tea.
<i>Nicotiana Tabacum</i>	Tobacco.
Night-blooming cereus.....	Cereus grandiflorus.
<i>Nuphar advena</i> (<i>Nymphaea advena</i>).....	Yellow Pond-lily.
Nutgall (<i>Quercus lusitanica</i>).....	Galla.
<i>Nymphaea advena</i>	Yellow Pond-lily.
<i>Nymphaea odorata</i> (<i>Castalia odorata</i>).....	White Pond-lily.
<i>Ocimum Basilicum</i>	Sweet Basil.
<i>Oenanthe Phellandrium</i>	Water Fennel seed.
<i>Oenothera biennis</i>	Evening Primrose.
Oregon Grape.....	Berberis Aquifolium.
<i>Origanum Majorana</i>	Sweet Marjoram leaves.
<i>Osmorrhiza longistylis</i>	Sweet Cicely.
<i>Osmunda regalis</i>	Buckhorn brake.
<i>Ostrya virginica</i>	Ironwood.
<i>Ottonia anisum</i> (<i>Piper Jaborandi</i>).....	Jambu Assu.
<i>Oxydendron arboreum</i>	Sourwood leaves.
<i>Pæonia officinalis</i>	Peony root.

SYNONYMS—CONTINUED.

Panama bark.....	Soap-tree bark.
Papaver Rhoëas.....	Red Poppy flowers.
Papaver somniferum.....	Poppy.
Para-Coto bark.....	Coto bark.
Partridge Berry.....	Squaw-vine.
Passiflora incarnata.....	Passion flower.
Paullinia Cupana.....	Guarana.
Pencil-flower.....	Stylosanthes.
Penthorum sedoides.....	Virginia Stonecrop.
Peumus Boldus.....	Boldo.
Phoradendron flavescens.....	Mistletoe.
Physostigma venenosum.....	Calabar Bean, Physostigma.
Phytolacca decandra.....	Phytolacca, Poke.
Picraena excelsa.....	Quassia.
Picramnia (species not determined) ..	Cascara Amarga.
Pilocarpus Jaborandi, and P. Selloanus ..	Pilocarpus, Jaborandi.
Pimenta acris.....	Bay Laurel.
Pimenta officinalis.....	Pimenta, Allspice.
Pimpinella Anisum.....	Anise.
Pimpinella Saxifraga.....	Saxifrage.
Pinus canadensis (Tsuga canadensis) ..	Hemlock Spruce bark.
Pinus Strobus.....	White Pine bark.
Piper angustifolium.....	Matico.
Piper Cubeba.....	Cubeb.
Piper Jaborandi.....	Jambu Assu.
Piper methysticum.....	Kavakava.
Piper nigrum.....	Black Pepper.
Piscidia Erythrina (P. Piscipula) ..	Jamaica Dogwood.
Plantago major.....	Plantain leaves.
Podophyllum peltatum.....	Podophyllum, Mandrake.
Poison Ivy.....	Poison Oak, Rhus Toxicodendron.
Polemonium reptans.....	Abscess-root.
Polygala Senega.....	Senega.
Polygonatum officinale.....	Solomon's-seal.
Polygonum acre (P. punctatum)	Water-pepper.
Polygonum bistorta.....	Bistort.
Polygonum punctatum.....	Water-pepper.
Polymnia Uvedalia.....	Bearsfoot.
Polypodium vulgare.....	Polypody leaves.
Polyporus officinalis.....	Agaric (White Agaric).
Polytrichum juniperinum.....	Hair-cap Moss.
Populus balsamifera, var. candicans ..	Balsam Poplar buds.
Populus tremuloides.....	White Poplar.
Potentilla canadensis.....	Cinquefoil (Five-finger herb).
Potentilla Tormentilla.....	Tormentilla root.
Prairie Pine-weed.....	Button Snakeroot, also Rosinweed.
Premna taitensis.....	Tonga.
Prince's Pine.....	Chimaphila, Pipsissewa.
Prinos verticillatus (Ilex verticillata) ..	Black Alder.
Prunus Persica.....	Peach.
Prunus virginiana, U. S. P. (Prunus serotina) ..	Wild Cherry.
Ptelea trifoliata.....	Wafer Ash.
Pterocarpus Marsupium.....	Kino.
Pterocarpus santalinus.....	Sandalwood.
Pterocaulon pycnostachyum.....	Indian Black-root.
Ptychotis Ajowan (Carum copticum) ..	Ajowan seed.
Pulmonaria officinalis.....	Lungwort.
Punica Granatum.....	Pomegranate.
Pycnanthemum montanum.....	Mountain Mint.

SYNONYMS—CONTINUED.

<i>Pyrus americana</i>	Mountain Ash bark.
<i>Pyrus Malus</i>	Apple-tree bark.
Queen's-root.....	Stillingia.
<i>Quercus alba</i>	White Oak bark.
<i>Quercus lusitanica</i>	source of Galla (Nutmall).
<i>Quercus rubra</i>	Red Oak bark.
<i>Quercus tinctoria</i>	Black Oak bark.
Quickens.....	Triticum, Couch-grass.
<i>Quillaja Saponaria</i>	Soap-tree bark.
Red Puccoon.....	Sanguinaria, Blood-root.
<i>Rhamnus cathartica</i>	Buckthorn berries.
<i>Rhamnus Frangula</i>	Frangula, Buckthorn bark.
<i>Rhamnus Purshiana</i>	Cascara Sagrada.
<i>Rhaphidophora vitiensis</i>	Tonga.
<i>Rheum officinale</i>	Rhubarb.
Rheumatism-root.....	Twin-leaf.
<i>Rhus glabra</i>	Sumach.
<i>Rhus radicans</i>	Poison Oak, <i>Rhus Toxicodendron</i> .
<i>Rhus Toxicodendron</i> (<i>R. radicans</i>)..	Poison Oak.
<i>Ricinus communis</i>	Castor-oil plant.
<i>Rosa gallica</i>	Rose.
<i>Rosa centifolia</i>	Rose petals, pale.
<i>Rosmarinus officinalis</i>	Rosemary.
<i>Rottlera tinctoria</i> (<i>Mallotus philippinensis</i>)..	Kamala.
<i>Rubus canadensis</i>	Dewberry root.
<i>Rubus strigosus</i>	Raspberry leaves.
<i>Rubus villosus</i>	Rubus, Blackberry.
<i>Rudbeckia laciniata</i>	Thimbleweed.
<i>Rumex Acetosella</i>	Sheep Sorrel.
<i>Rumex crispus</i>	Rumex, Yellow Dock.
<i>Ruta graveolens</i>	Rue.
<i>Sabal serrulata</i> (<i>Serenoa serrulata</i>)..	Saw Palmetto.
<i>Sabbatia angularis</i>	American Centaury.
<i>Sabbatia Elliottii</i>	Quinine-flower.
Saffron, American (<i>Carthamus tinctorius</i>)..	Safflower.
Saint John's-wort.....	Johnswort.
<i>Salix alba</i>	White Willow.
<i>Salix nigra</i>	Black Willow.
Salt-rheum weed.....	Balmomy.
<i>Salvia officinalis</i>	Sage.
<i>Sambucus canadensis</i>	Elder.
<i>Sambucus nigra</i>	European Elder.
<i>Sanguinaria canadensis</i>	Sanguinaria, Blood-root.
<i>Santalum album</i>	Sandalwood.
<i>Saponaria officinalis</i>	Soapwort.
<i>Sarothamnus Scoparius</i> (<i>Cytisus Scoparius</i>).....	Scoparius, Broom tops.
<i>Sarracenia flava</i>	Trumpet-plant.
<i>Sarracenia purpurea</i>	Pitcher-plant.
<i>Sassafras variifolia</i>	Sassafras.
<i>Satureja hortensis</i>	Summer-savory.
Scale-flower.....	Mutisia.
<i>Schoenocaulon officinale</i> (<i>Asagraea officinalis</i>)..	Cevadilla.
<i>Scilla</i>	Squill.
<i>Scoparius</i>	Broom tops.
<i>Scopolia carniolica</i>	Scopolia.
<i>Scrophularia Marilandica</i>	Figwort, Carpenter's-square.
<i>Scutellaria canescens</i>	Scullcap.
<i>Scutellaria lateriflora</i>	Scutellaria.

SYNONYMS—CONTINUED.

<i>Senecio aureus</i>	Life-root.
<i>Serenoa serrulata</i>	Saw Palmetto.
<i>Sesamum indicum</i>	Benne leaves.
Sheep Laurel.....	Mountain Laurel.
Sierra Salvia.....	Mountain Sage.
<i>Silphium laciniatum</i>	Rosin-weed.
<i>Simaba Cedron</i>	Cedron seed.
<i>Simaruba amara</i>	Simaruba bark.
Slippery Elm.....	Elm bark.
<i>Smilax herbacea</i>	Jacob's-ladder.
<i>Smilax medica</i>	Sarsaparilla, Mexican.
<i>Smilax officinalis</i>	Sarsaparilla, Honduras.
<i>Smilax Pseudo-China</i>	Bamboo-brier root.
<i>Smilax</i> (species not determined)....	Sarsaparilla, Para.
Snakeweed.....	Bistort.
<i>Solanum carolinense</i>	Horse-nettle.
<i>Solanum Dulcamara</i>	Dulcamara, Bittersweet.
<i>Solanum paniculatum</i>	Jurubeba.
<i>Solidago odora</i>	Golden-rod.
<i>Solidago Virgaurea</i>	Solidago.
<i>Sorbus americana</i> (<i>Pyrus americana</i>)..	Mountain Ash.
<i>Sorghum saccharatum</i>	Broom-corn seed.
<i>Spigelia marilandica</i>	Spigelia, Pink-root.
<i>Spiraea tomentosa</i>	Hardhack.
<i>Stachys Betonica</i>	Wood Betony.
<i>Statice Limonium</i> , var. <i>caroliniana</i> ..	Marsh-rosemary.
<i>Stellaria media</i>	Chickweed.
<i>Sticta pulmonaria</i>	Lungmoss.
<i>Stigmata Maydis</i>	Corn-silk.
<i>Stillingia sylvatica</i>	Stillingia.
<i>Strophanthus Kombe</i>	Strophanthus.
<i>Strychnos Ignatii</i>	Ignatia.
<i>Strychnos malaccensis</i>	Poang-nan.
<i>Strychnos Nux-vomica</i>	Nux Vomica.
<i>Stylosanthes elatior</i>	Stylosanthes, Pencil-flower.
Sumbul.....	Musk-root.
Sweet Balm (see note 166).....	Lemon Balm.
<i>Swertia Chirata</i>	Chirata.
<i>Sycocarpus Rusbyi</i> (<i>Guarea Rusbyi</i>)..	Cocillafia.
